-- TAG-FEATURESETUPLINKPERCC-STOP
-- ASN1STOP
```

– *FeatureSetUplinkPerCC-Id*

The IE *FeatureSetUplinkPerCC-Id* identifies a set of features applicable to one carrier of a feature set. The *FeatureSetUplinkPerCC-Id* of a *FeatureSetUplinkPerCC* is the index position of the *FeatureSetUplinkPerCC* in the *featureSetsUplinkPerCC*. The first element in the list is referred to by *FeatureSetUplinkPerCC-Id* = 1, and so on.

FeatureSetUplinkPerCC-Id information element

```
-- ASN1START
-- TAG-FEATURESETUPLINKPERCC-ID-START

FeatureSetUplinkPerCC-Id ::=          INTEGER (1..maxPerCC-FeatureSets)

-- TAG-FEATURESETUPLINKPERCC-ID-STOP
-- ASN1STOP
```

– *FreqBandIndicatorEUTRA*

```
-- ASN1START
-- TAG-FREQBANDINDICATOREUTRA-START

FreqBandIndicatorEUTRA ::=  INTEGER (1..maxBandsEUTRA)

-- TAG-FREQBANDINDICATOREUTRA-STOP
-- ASN1STOP
```

– *FreqBandList*

The IE *FreqBandList* is used by the network to request NR CA, NR non-CA and/or MR-DC band combinations for specific NR and/or E-UTRA frequency bands and/or up to a specific number of carriers and/or up to specific aggregated bandwidth. This is also used to request feature sets (for NR) and feature set combinations (for NR and MR-DC). For NR sidelink communication, this is used by the initiating UE to request sidelink UE radio access capabilities from the peer UE. This is also used to request lower MSD capability for specific NR frequency bands for the UE supporting lower MSD.

FreqBandList information element

```
-- ASN1START
-- TAG-FREQBANDLIST-START

FreqBandList ::=              SEQUENCE (SIZE (1..maxBandsMRDC)) OF FreqBandInformation

FreqBandInformation ::=        CHOICE {
   bandInformationEUTRA           FreqBandInformationEUTRA,

```

***MIMO-ParametersPerBand* field descriptions**
codebookParametersPerBand For a given frequency band, this field this field indicates the alternative list of *SupportedCSI-RS-Resource* supported for each codebook type. The supported CSI-RS resources indicated by this field are referred by *codebookParametersperBC* in *CA-ParametersNR* to indicate the supported CSI-RS resource per band combination.
csi-RS-IM-ReceptionForFeedback/ csi-RS-ProcFrameworkForSRS/ csi-ReportFramework CSI related capabilities which the UE supports on each of the carriers operated on this band. If the network configures the UE with serving cells on both FR1 and FR2 bands these values may be further limited by the corresponding fields in *fr1-fr2-Add-UE-NR-Capabilities*.
supportNewDMRS-Port Presence of this field set to *supported1*, *supported2* or *supported3* indicates that the UE supports the new DMRS port entry {0,2,3}.

– *ModulationOrder*

The IE *ModulationOrder* is used to convey the maximum supported modulation order.

***Phy-ParametersFRX-Diff* field descriptions**
csi-RS-IM-ReceptionForFeedback/ csi-RS-ProcFrameworkForSRS/ csi-ReportFramework
These fields are optionally present in *fr1-fr2-Add-UE-NR-Capabilities* in *UE-NR-Capability*. They shall not be set in any other instance of the IE *Phy-ParametersFRX-Diff*. If the network configures the UE with serving cells on both FR1 and FR2 bands, these parameters, if present, limit the corresponding parameters in *MIMO-ParametersPerBand*.

– *Phy-ParametersMRDC*

The IE *Phy-ParametersMRDC* is used to convey physical layer capabilities for MR-DC.

Phy-ParametersMRDC information element

***RF-Parameters* field descriptions**
appliedFreqBandListFilter In this field the UE mirrors the *FreqBandList* that the NW provided in the capability enquiry, if any, as described in clause 5.6.1.4. The UE filtered the band combinations in the *supportedBandCombinationList* in accordance with this *appliedFreqBandListFilter*. The UE does not include this field if the UE capability is requested by E-UTRAN and the network request includes the field *eutra-nr-only* [10].
dummy1, dummy2, dummy-ltm-MAC-CE-JointTCI-r18, dummy-ltm-MAC-CE-SeparateTCI-r18 The fields are not used in the specification and the network ignores the received values.
supportedBandCombinationList A list of band combinations that the UE supports for NR (and NR-DC, if requested). The *FeatureSetCombinationId*:s in this list refer to the *FeatureSetCombination* entries in the *featureSetCombinations* list in the *UE-NR-Capability* IE. The UE does not include this field if the UE capability is requested by E-UTRAN and the network request includes the field *eutra-nr-only* [10].
supportedBandCombinationListSidelinkEUTRA-NR A list of band combinations that the UE supports for NR sidelink communication only, for joint NR sidelink communication and V2X sidelink communication, or for V2X sidelink communication only. The UE does not include this field if the UE capability is requested by E-UTRAN (see TS 36.331[10]) and the network request includes the field *eutra-nr-only*.
supportedBandCombinationListSL-NonRelayDiscovery A list of band combinations that the UE supports for NR sidelink non-relay discovery. The encoding is defined in PC5 *BandCombinationListSidelinkNR-r16.*
supportedBandCombinationListSL-RelayDiscovery A list of band combinations that the UE supports for NR sidelink relay discovery. The encoding is defined in PC5 *BandCombinationListSidelinkNR-r16.*
supportedBandCombinationListSL-U2U-DiscoveryExt This field indicates the band parameter in *BandCombinationListSL-Discovery-r17* that the UE supports for NR U2U sidelink relay discovery in a band included in *supportedBandCombinationListSL-U2U-RelayDiscovery*.
supportedBandCombinationListSL-U2U-RelayDiscovery A list of band combinations that the UE supports for NR U2U sidelink relay discovery. The encoding is defined in PC5 *BandCombinationListSidelinkNR-r16.*
supportedBandCombinationList-UplinkTxSwitch A list of band combinations that the UE supports dynamic uplink Tx switching for NR UL CA and SUL. The *FeatureSetCombinationId*:s in this list refer to the *FeatureSetCombination* entries in the *featureSetCombinations* list in the *UE-NR-Capability* IE. The UE does not include this field if the UE capability is requested by E-UTRAN and the network request includes the field *eutra-nr-only* [10].
supportedBandListNR A list of NR bands supported by the UE. If *supportedBandListNR-v16c0* is included, the UE shall include the same number of entries, and listed in the same order, as in *supportedBandListNR* (without suffix).

– *RF-ParametersMRDC*

The IE *RF-ParametersMRDC* is used to convey RF related capabilities for MR-DC.

***RF-ParametersMRDC* field descriptions**
appliedFreqBandListFilter In this field the UE mirrors the *FreqBandList* that the NW provided in the capability enquiry, if any. The UE filtered the band combinations in the *supportedBandCombinationList* in accordance with this *appliedFreqBandListFilter*.
dummy1, dummy2 The fields are not used in the specification and the network ignores the received values.
supportedBandCombinationList A list of band combinations that the UE supports for (NG)EN-DC, or both (NG)EN-DC and NE-DC. The *FeatureSetCombinationId*:s in this list refer to the *FeatureSetCombination* entries in the *featureSetCombinations* list in the *UE-MRDC-Capability* IE.
supportedBandCombinationListNEDC-Only, supportedBandCombinationListNEDC-Only-v1610, supportedBandCombinationListNEDC-Only-v1780 A list of band combinations that the UE supports only for NE-DC. The *FeatureSetCombinationId*:s in this list refer to the *FeatureSetCombination* entries in the *featureSetCombinations* list in the *UE-MRDC-Capability* IE.
supportedBandCombinationList-UplinkTxSwitch A list of band combinations that the UE supports dynamic UL Tx switching for (NG)EN-DC. The *FeatureSetCombinationId*:s in this list refer to the *FeatureSetCombination* entries in the *featureSetCombinations* list in the *UE-MRDC-Capability* IE.

– *RLC-Parameters*

The IE *RLC-Parameters* is used to convey capabilities related to RLC.

***SidelinkParametersEUTRA* field descriptions**
sl-ParametersEUTRA1, sl-ParametersEUTRA2, sl-ParametersEUTRA3 This field includes IE of *SL-Parameters-v1430* (where *v2x-eNB-Scheduled-r14* and *V2X-SupportedBandCombination-r14* shall not be included), *SL-Parameters-v1530* (where *V2X-SupportedBandCombination-r1530* shall not be included) and *SL-Parameters-v1540* respectively defined in 36.331 [10]. It is used for reporting the per-UE capability for V2X sidelink communication.

– *SimultaneousRxTxPerBandPair*

The IE *SimultaneousRxTxPerBandPair* contains the simultaneous Rx/Tx UE capability for each band pair in a band combination.

SimultaneousRxTxPerBandPair information element

```
-- ASN1START
-- TAG-SIMULTANEOUSRXTXPERBANDPAIR-START

SimultaneousRxTxPerBandPair ::=           BIT STRING (SIZE (3..496))

-- TAG-SIMULTANEOUSRXTXPERBANDPAIR-STOP
-- ASN1STOP
```

– *SON-Parameters*

The IE *SON-Parameters* contains SON related parameters.

SON-Parameters information element

```
-- ASN1START
-- TAG-SON-PARAMETERS-START

    ue-CapabilityRAT-Container         OCTET STRING
}

-- TAG-UE-CAPABILITYRAT-CONTAINERLIST-STOP
-- ASN1STOP
```

UE-CapabilityRAT-ContainerList field descriptions
ue-CapabilityRAT-Container
Container for the UE capabilities of the indicated RAT. The encoding is defined in the specification of each RAT: For *rat-Type* set to *nr*: the encoding of UE capabilities is defined in *UE-NR-Capability*. For *rat-Type* set to *eutra-nr*: the encoding of UE capabilities is defined in *UE-MRDC-Capability*. For *rat-Type* set to *eutra*: the encoding of UE capabilities is defined in *UE-EUTRA-Capability* specified in TS 36.331 [10]. For *rat-Type* set to *utra-fdd*: the octet string contains the INTER RAT HANDOVER INFO message defined in TS 25.331 [45].

– *UE-CapabilityRAT-RequestList*

The IE *UE-CapabilityRAT-RequestList* is used to request UE capabilities for one or more RATs from the UE.

UE-CapabilityRAT-RequestList information element

```
-- ASN1START
-- TAG-UE-CAPABILITYRAT-REQUESTLIST-START

UE-CapabilityRAT-RequestList ::=      SEQUENCE (SIZE (1..maxRAT-CapabilityContainers)) OF UE-CapabilityRAT-Request

UE-CapabilityRAT-Request ::=          SEQUENCE {
    rat-Type                          RAT-Type,
    capabilityRequestFilter              OCTET STRING                OPTIONAL,   -- Need N
    ...
```

```
}

-- TAG-UE-CAPABILITYRAT-REQUESTLIST-STOP
-- ASN1STOP
```

***UE-CapabilityRAT-Request* field descriptions**
capabilityRequestFilter Information by which the network requests the UE to filter the UE capabilities. For *rat-Type* set to *nr* or *eutra-nr*: the encoding of the *capabilityRequestFilter* is defined in *UE-CapabilityRequestFilterNR*. For *rat-Type* set to *eutra*: the encoding of the *capabilityRequestFilter* is defined by *UECapabilityEnquiry* message defined in TS36.331 [10], in which *RAT-Type* in *UE-CapabilityRequest* includes only '*eutra*'.
rat-Type The RAT type for which the NW requests UE capabilities.

– *UE-CapabilityRequestFilterCommon*

The IE *UE-CapabilityRequestFilterCommon* is used to request filtered UE capabilities. The filter is common for all capability containers that are requested.

***UE-CapabilityRequestFilterCommon* information element**

```
-- ASN1START

    mode-r16             ENUMERATED {sync, async}
}

-- TAG-UE-CAPABILITYREQUESTFILTERCOMMON-STOP
-- ASN1STOP
```

UE-CapabilityRequestFilterCommon field descriptions
codebookTypeRequest Only if this field is present, the UE includes *SupportedCSI-RS-Resource* supported for the codebook type(s) requested within this field (i.e. type I single/multi-panel, type II and type II port selection) into *codebookVariantsList*, *codebookParametersPerBand* and *codebookParametersPerBC*. If this field is present and none of the codebook types is requested within this field (i.e. empty field), the UE includes *SupportedCSI-RS-Resource* supported for all codebook types into *codebookVariantsList*, *codebookParametersPerBand* and *codebookParametersPerBC*.
fallbackGroupFiveRequest Only if this field is present, the UE supporting FR2 CA bandwidth class from fallback group 5 shall include band combinations with FR2 CA bandwidth class from fallback group 5, and shall omit band combinations with FR2 CA bandwidth class from fallback group 2 or 3 (see TS 38.101-2 [39]) with same or lower capabilities.
includeNE-DC Only if this field is present, the UE supporting NE-DC shall indicate support for NE-DC in band combinations and include feature set combinations which are applicable to NE-DC. Band combinations supporting both NE-DC and (NG)EN-DC shall be included in *supportedBandCombinationList*, band combinations supporting only NE-DC shall be included in *supportedBandCombinationListNEDC-Only*.
includeNR-DC Only if this field is present, the UE supporting NR-DC shall indicate support for NR-DC in band combinations and include feature set combinations which are applicable to NR-DC.
lowerMSDRequest Only if this field is present, the UE supporting lower MSD shall indicate the lower MSD capability for the requested power class if supported. If no power class is explicitly requested, the UE supporting lower MSD shall indicate the lower MSD capability for the highest supported power class of the band combination consisting of victim band and aggressor band(s).
mode The mode of NR-DC operation that the NW is interested in for this cell grouping. The value *sync* means that the UE only indicates NR-DC support for band combinations for which it supports synchronous NR-DC with the requested cell grouping. The value *async* means that the UE only indicates NR-DC support for band combinations for which it supports asynchronous NR-DC with the requested cell grouping.
omitEN-DC Only if this field is present, the UE shall omit band combinations and feature set combinations which are only applicable to (NG)EN-DC.
requestedCellGrouping The NR-DC cell groupings that the NW is interested in, i.e., the bands that it might use in an MCG and the bands that it might use in an SCG. Only if this field is present, the UE indicates NR-DC support for band combinations for which it supports the requested cell grouping, i.e., in which it supports at least one of the *mcg* bands on MCG and at least one of the *scg* bands on the SCG. In its *supportedBandCombinationList*, the UE indicates which of its NR-DC band combinations supports which of the requested cell groupings. The first element in this list is referred to by ID#0, the second by ID#1 and so on. If this field is absent, the UE only includes band combinations for which it supports NR-DC with only FR1 bands in MCG and only FR2 bands in SCG. Example 1: *requestedCellGrouping* is set to *mcg*=[n1, n7, n41, n66] and *scg*=[n78, n261]. This assumes that the NW would always use CA among n1, n7, n41 and n66 (depending on which are deployed on a given site) whereas with n78 and/or n261 the NW may need to use DC. With this filter a UE may report a band combination n1A-n7A-n78A for NR-DC only if it supports that serving cells for n1 and n7 are in the MCG and a serving cell for n78 is in the SCG. The UE may also report a band combination n41C-n261M for NR-DC provided that it supports a serving cell for n41 in the MCG and a serving cell for n261 in the SCG. Example 2: One *requestedCellGrouping* is set to *mcg*=[n1, n7, n41, n66] and s*cg*=[n78, n261] and another *requestedCellGrouping* is set to *mcg*=[n1, n7, n66] and s*cg*=[n41, n78, n261]. This assumes that the NW uses sometimes CA among n1, n7, n41 and n66 (as in example 1) and sometimes CA among n1, n7 and n66 but DC towards one or several of n41, n78, n261. If a UE supports n1A-n41A-n78A only if n41A and n78A are in the same cell group, this UE may only indicate cell grouping ID#1 (not #0) in its BC.
uplinkTxSwitchRequest Only if this field is present, the UE supporting dynamic UL Tx switching shall indicate support for UL Tx switching in band combinations which are applicable to inter-band UL CA, SUL and (NG)EN-DC.

Conditional Presence	Explanation
NRDC	The field is optionally present, Need N, if *includeNR-DC* is included. It is absent otherwise.

– *UE-CapabilityRequestFilterNR*

The IE *UE-CapabilityRequestFilterNR* is used to request filtered UE capabilities.

UE-CapabilityRequestFilterNR information element

```

***UE-MRDC-Capability* field descriptions**
featureSetCombinations
A list of *FeatureSetCombination*:s for *supportedBandCombinationList* and *supportedBandCombinationListNEDC-Only* in *UE-MRDC-Capability*. The *FeatureSetDownlink*:s and *FeatureSetUplink*:s referred to from these *FeatureSetCombination*:s are defined in the *featureSets* list in *UE-NR-Capability*.

– *UE-NR-Capability*

The IE *UE-NR-Capability* is used to convey the NR UE Radio Access Capability Parameters, see TS 38.306 [26].

6.3.4 Other information elements

– *AbsoluteTimeInfo*

The IE *AbsoluteTimeInfo* indicates an absolute time in a format YY-MM-DD HH:MM:SS and using BCD encoding. The first/ leftmost bit of the bit string contains the most significant bit of the most significant digit of the year and so on.

AbsoluteTimeInfo information element

```
-- ASN1START
-- TAG-ABSOLUTETIMEINFO-START

AbsoluteTimeInfo-r16 ::= BIT STRING (SIZE (48))

-- TAG-ABSOLUTETIMEINFO-STOP
-- ASN1STOP
```

– *AppLayerIdleInactiveConfig*

The IE *AppLayerIdleInactiveConfig* indicates parameters specific to application layer measurements applicable to RRC_IDLE and RRC_INACTIVE. The configured application layer measurement is also applicable to RRC_CONNECTED.

AppLayerIdleInactiveConfig information element

```
-- ASN1START
-- TAG-APPLAYERIDLEINACTIVECONFIG-START

AppLayerIdleInactiveConfig-r18 ::=   SEQUENCE {
    measConfigAppLayerId-r18          MeasConfigAppLayerId-r17,
    serviceType-r18                  ENUMERATED {streaming, mtsi, vr, spare5, spare4, spare3, spare2, spare1}  OPTIONAL, -- Need M
    appLayerMeasPriority-r18          INTEGER (1..16)                                                  OPTIONAL, -- Need M

    playoutDelayForMediaStartup-r18     ENUMERATED {true}                                 OPTIONAL, -- Need M
    ...
}

-- TAG-APPLAYERIDLEINACTIVECONFIG-STOP
-- ASN1STOP
```

***AppLayerIdleInactiveConfig* field descriptions**
appLayerBufferLevelList The field defines whether the buffer level for DASH streaming and VR service types can be collected as a RAN visible QoE metric from the UE.
qoe-AreaScope The field contains the area where the application layer measurement shall start if an application layer session starts.
qoe-MeasurementType Indicates whether the application layer measurement is signalling based or management based.
qoe-Reference Indicates the QoE Reference as defined in TS 28.405 [80], clause 5.2.
mce-id The field contains the Measurement Collection Entity ID.
playoutDelayForMediaStartup The field defines whether the playout delay for DASH streaming and VR service types can be collected as a RAN visible QoE metric from the UE.

– *AppLayerMeasConfig*

The IE *AppLayerMeasConfig* indicates configuration of application layer measurements.

-- ASN1STOP
```

***AppLayerMeasConfig* field descriptions**
appLayerMeasPriority The field indicates the priority of the application layer measurement configuration, where a higher value indicates lower priority. If the field is not configured, the application layer measurement configuration has the lowest priority.
idleInactiveReportAllowed The field indicates whether transmission of application layer measurement configurations and reports for application layer measurements applicable to RRC_IDLE and/or RRC_INACTIVE is allowed in the cell where the field is received. If the field is not configured, transmission of application layer measurement reports and configurations for RRC_IDLE/RRC_INACTIVE is not allowed.
measConfigAppLayerContainer The field contains configuration of application layer measurements, see Annex L (normative) in TS 26.247 [68], clause 16.5 in TS 26.114 [69] and clause 9.4 in TS 26.118 [70].
measConfigAppLayerId The field contains the identity of the application layer measurements. When application layer measurements are configured for an SCG, the *measConfigAppLayerId* is obtained according to TS 38.423 [37], clauses 8.3.1 and 8.3.3.
pauseReporting The field indicates whether the transmission of *measReportAppLayerContainer* is paused or not. Value *true* indicates the transmission of *measReportAppLayerContainer* is paused; value *false* indicates the transmission of *measReportAppLayerContainer* is not paused.
ran-VisibleParameters The field indicates whether RAN visible application layer measurements shall be reported or not.
ran-VisibleReportingSRB The field indicates the SRB to be used for transmission of RAN visible application layer measurement reports.
reportingSRB The field indicates the SRB to be used for transmission of encapsulated application layer measurement reports.
rrc-SegAllowedSRB4 This field indicates that RRC segmentation of *MeasurementReportAppLayer* is enabled on SRB4. The field is only configured for an MCG. It may be present only if the UE supports RRC segmentation of the *MeasurementReportAppLayer* message***.***
rrc-SegAllowedSRB5 This field indicates that RRC segmentation of *MeasurementReportAppLayer* is enabled on SRB5. The field is only configured for an SCG. It may be present only if the UE supports RRC segmentation of the *MeasurementReportAppLayer* message***.***
serviceType Indicates the type of application layer measurement. Value *streaming* indicates Quality of Experience Measurement Collection for streaming services (see TS 26.247 [68]), value *mtsi* indicates Quality of Experience Measurement Collection for MTSI (see TS 26.114 [69]) and value *vr* indicates Quality of Experience Measurement Collection for VR service (see TS 26.118 [70]). The network always configures *serviceType* when application layer measurements are initially configured and at *fullConfig*.
transmissionOfSessionStartStop Value *true* indicates that the UE shall transmit indications when the measurement session in the application layer starts and stops. Value *false* indicates that the UE shall not transmit any session status indications. The UE transmits a session start indication upon configuration of this field set to value *true* if a session already has started in the application layer.

***RAN-VisibleParameters* field descriptions**
numberOfBufferLevelEntries The field contains the maximum number of buffer level entries that can be reported for RAN visible application layer measurements. This field is also used by application layer to calculate the interval of RAN visible buffer level measurement, which is equal to the periodicity of RAN visible application layer measurements reporting divided by *numberOfBufferLevelEntries*.
ran-VisiblePeriodicity The field indicates the periodicity of RAN visible application layer measurements reporting. Value *ms120* indicates 120 ms, value *ms240* indicates 240 ms and so on. If this field is absent, the periodicity of RAN visible application layer measurements reporting is the same as the reporting periodicity indicated in *measConfigAppLayerContainer.*
reportPlayoutDelayForMediaStartup The field indicates whether the UE shall report Playout Delay for Media Startup for RAN visible application layer measurements.

Conditional Presence	Explanation
QoENRDC	This field is optionally present, Need M, when QoE for an NR-DC configuration is configured, i.e. when either QoE for an SCG is configured or when SRB5 is configured. Otherwise, it is absent.
ServiceType	This field is optionally present, Need M, when *serviceType* is set to *streaming* or *vr*. Otherwise, it is absent.

– *AreaConfiguration*

The *AreaConfiguration* indicates area for which UE is requested to perform measurement logging. If not configured, measurement logging is not restricted to specific cells or tracking areas but applies as long as the RPLMN is contained in *plmn-IdentityList* stored in *VarLogMeasReport* or the registered SNPN identity is included in *snpn-ConfigID-List* stored in *VarLogMeasReport*.

}

-- TAG-AREACONFIGURATION-STOP
-- ASN1STOP
```

***AreaConfiguration* field descriptions**
cag-IdentityList The *cag-IdentityList* contains one or more CAG IDs. A PLMN ID may be present more than once within *CAG-ConfigList.*
InterFreqTargetInfo If configured, it indicates the neighbouring frequency and cells for which UE is requested to perform measurement logging. It can include sync raster or non-sync raster frequencies.
nid-IdentityList The *nid-IdentityList* contains one or more NID. All NIDs associated to the same PLMN ID are listed in the same *nid-IdentityList* entry.

– *BT-NameList*

The IE *BT-NameList* is used to indicate the names of the Bluetooth beacon which the UE is configured to measure.

BT-NameList information element

```
-- ASN1START
-- TAG-BTNAMELIST-START

BT-NameList-r16 ::=             SEQUENCE (SIZE (1..maxBT-Name-r16)) OF BT-Name-r16

BT-Name-r16 ::=                OCTET STRING (SIZE (1..248))

-- TAG-BTNAMELIST-STOP
-- ASN1STOP
```

***BT-NameList* field descriptions**
bt-Name If configured, the UE only performs Bluetooth measurements according to the names identified. For each name, it refers to LOCAL NAME defined in Bluetooth specification [51].

– *DedicatedInfoF1c*

The IE *DedicatedInfoF1c* is used to transfer IAB-DU specific F1-C related information between the network and the IAB node. The carried information consists of F1AP message encapsulated in SCTP/IP or F1-C related (SCTP)/IP packet, see TS 38.472 [64]. The RRC layer is transparent for this information.

***DedicatedInfoF1c* information element**

```
-- ASN1START
-- TAG-DEDICATEDINFOF1C-START

DedicatedInfoF1c-r17 ::=       OCTET STRING

-- TAG-DEDICATEDINFOF1C-STOP
-- ASN1STOP
```

– *EUTRA-AllowedMeasBandwidth*

The IE *EUTRA-AllowedMeasBandwidth* is used to indicate the maximum allowed measurement bandwidth on a carrier frequency as defined by the parameter Transmission Bandwidth Configuration "N_{RB}" in TS 36.104 [33]. The values *mbw6*, *mbw15*, *mbw25*, *mbw50*, *mbw75*, *mbw100* indicate 6, 15, 25, 50, 75 and 100 resource blocks, respectively.

***EUTRA-AllowedMeasBandwidth* information element**

```
-- ASN1START
-- TAG-EUTRA-ALLOWEDMEASBANDWIDTH-START

EUTRA-AllowedMeasBandwidth ::=           ENUMERATED {mbw6, mbw15, mbw25, mbw50, mbw75, mbw100}

-- TAG-EUTRA-ALLOWEDMEASBANDWIDTH-STOP
-- ASN1STOP
```

– *EUTRA-MBSFN-SubframeConfigList*

The IE *EUTRA-MBSFN-SubframeConfigList* is used to define an E-UTRA MBSFN subframe pattern (for the purpose of NR rate matching).

***EUTRA-MBSFN-SubframeConfigList* information element**

```
-- ASN1START
-- TAG-EUTRA-MBSFN-SUBFRAMECONFIGLIST-START

EUTRA-MBSFN-SubframeConfigList ::= SEQUENCE (SIZE (1..maxMBSFN-Allocations)) OF EUTRA-MBSFN-SubframeConfig

EUTRA-MBSFN-SubframeConfig ::=     SEQUENCE {
   radioframeAllocationPeriod        ENUMERATED {n1, n2, n4, n8, n16, n32},
   radioframeAllocationOffset        INTEGER (0..7),
   subframeAllocation1              CHOICE {
      oneFrame                       BIT STRING (SIZE(6)),
      fourFrames                      BIT STRING (SIZE(24))
   },
   subframeAllocation2              CHOICE {
```

```
      oneFrame                      BIT STRING (SIZE(2)),
      fourFrames                    BIT STRING (SIZE(8))
   }                                                                                OPTIONAL,   -- Need R
   ...
}

-- TAG-EUTRA-MBSFN-SUBFRAMECONFIGLIST-STOP
-- ASN1STOP
```

***EUTRA-MBSFN-SubframeConfig* field descriptions**
radioframeAllocationOffset Field as defined in *MBSFN-SubframeConfig* in TS 36.331 [10].
radioframeAllocationPeriod Field as defined in *MBSFN-SubframeConfig* in TS 36.331 [10], where *SFN* refers to the SFN of the NR serving cell.
subframeAllocation1 Field as defined in *MBSFN-SubframeConfig* in TS 36.331 [10], where the UE assumes the duplex mode (FDD or TDD) of the NR cell for which the *E-UTRA-MBSFN-SubframeConfig* is provided.
subframeAllocation2 Field as defined in *MBSFN-SubframeConfig-v1430* in TS 36.331 [10], where the UE assumes the duplex mode (FDD or TDD) of the NR cell for which the *E-UTRA-MBSFN-SubframeConfig* is provided.

– *EUTRA-MultiBandInfoList*

The IE *EUTRA-MultiBandInfoList* indicates the list of frequency bands in addition to the band represented by *CarrierFreq* for which cell reselection parameters are common, and a list of *additionalPmax* and *additionalSpectrumEmission*.

EUTRA-MultiBandInfoList information element

```
-- ASN1START
-- TAG-EUTRA-MULTIBANDINFOLIST-START

EUTRA-MultiBandInfoList ::=    SEQUENCE (SIZE (1..maxMultiBands)) OF EUTRA-MultiBandInfo

EUTRA-MultiBandInfo ::=       SEQUENCE {
   eutra-FreqBandIndicator       FreqBandIndicatorEUTRA,
   eutra-NS-PmaxList             EUTRA-NS-PmaxList                    OPTIONAL    -- Need R
}

-- TAG-EUTRA-MULTIBANDINFOLIST-STOP
-- ASN1STOP
```

– *EUTRA-MultiBandInfoListAerial*

The IE *EUTRA-MultiBandInfoListAerial* indicates the list of frequency bands for aerial UE in addition to the band represented by *CarrierFreq* for which cell reselection parameters are common, and a list of *additionalPmax* and *additionalSpectrumEmission*.

EUTRA-MultiBandInfoListAerial information element

```
-- ASN1START
-- TAG-EUTRA-MULTIBANDINFOLISTAERIAL-START

EUTRA-MultiBandInfoListAerial-r18 ::=    SEQUENCE (SIZE (1..maxMultiBands)) OF EUTRA-MultiBandInfoAerial-r18

EUTRA-MultiBandInfoAerial-r18 ::=       SEQUENCE {
    eutra-FreqBandIndicator-r18           FreqBandIndicatorEUTRA,
    eutra-NS-PmaxListAerial-r18           EUTRA-NS-PmaxList             OPTIONAL    -- Need R
}

-- TAG-EUTRA-MULTIBANDINFOLISTAERIAL-STOP
-- ASN1STOP
```

– *EUTRA-NS-PmaxList*

The IE *EUTRA-NS-PmaxList* concerns a list of *additionalPmax* and *additionalSpectrumEmission*, as defined in TS 36.101 [22], clause 6, for a given frequency band.

EUTRA-NS-PmaxList information element

```
-- ASN1START
-- TAG-EUTRA-NS-PMAXLIST-START

EUTRA-NS-PmaxList ::=            SEQUENCE (SIZE (1..maxEUTRA-NS-Pmax)) OF EUTRA-NS-PmaxValue

EUTRA-NS-PmaxValue ::=           SEQUENCE {
    additionalPmax                 INTEGER (-30..33)                OPTIONAL,   -- Need R
    additionalSpectrumEmission       INTEGER (1..288)                 OPTIONAL    -- Need R
}

-- TAG-EUTRA-NS-PMAXLIST-STOP
-- ASN1STOP
```

– *EUTRA-PhysCellId*

The IE *EUTRA-PhysCellId* is used to indicate the physical layer identity of the cell, as defined in TS 36.211 [31].

***EUTRA-PhysCellId* information element**

```
-- ASN1START
-- TAG-EUTRA-PHYSCELLID-START

EUTRA-PhysCellId ::=                    INTEGER (0..503)

-- TAG-EUTRA-PHYSCELLID-STOP
-- ASN1STOP
```

– *EUTRA-PhysCellIdRange*

The IE *EUTRA-PhysCellIdRange* is used to encode either a single or a range of physical cell identities. The range is encoded by using a *start* value and by indicating the number of consecutive physical cell identities (including *start*) in the range. For fields comprising multiple occurrences of *EUTRA-PhysCellIdRange*, NW may configure overlapping ranges of physical cell identities.

***EUTRA-PhysCellIdRange* information element**

```
-- ASN1START
-- TAG-EUTRA-PHYSCELLIDRANGE-START

EUTRA-PhysCellIdRange ::=       SEQUENCE {
    start                       EUTRA-PhysCellId,
    range                       ENUMERATED {n4, n8, n12, n16, n24, n32, n48, n64, n84, n96,
                                        n128, n168, n252, n504, spare2, spare1}                 OPTIONAL    -- Need N
}

-- TAG-EUTRA-PHYSCELLIDRANGE-STOP
-- ASN1STOP
```

– *EUTRA-PresenceAntennaPort1*

The IE *EUTRA-PresenceAntennaPort1* is used to indicate whether all the neighbouring cells use Antenna Port 1. When set to *true*, the UE may assume that at least two cell-specific antenna ports are used in all neighbouring cells.

***EUTRA-PresenceAntennaPort1* information element**

```
-- ASN1START
-- TAG-EUTRA-PRESENCEANTENNAPORT1-START

EUTRA-PresenceAntennaPort1 ::=          BOOLEAN

-- TAG-EUTRA-PRESENCEANTENNAPORT1-STOP
-- ASN1STOP
```

– *EUTRA-Q-OffsetRange*

The IE *EUTRA-Q-OffsetRange* is used to indicate a cell, or frequency specific offset to be applied when evaluating triggering conditions for measurement reporting. The value in dB. Value *dB-24* corresponds to -24 dB, value *dB-22* corresponds to -22 dB and so on.

EUTRA-Q-OffsetRange information element

```
-- ASN1START
-- TAG-EUTRA-Q-OFFSETRANGE-START

EUTRA-Q-OffsetRange ::=                 ENUMERATED {
                                        dB-24, dB-22, dB-20, dB-18, dB-16, dB-14,
                                        dB-12, dB-10, dB-8, dB-6, dB-5, dB-4, dB-3,
                                        dB-2, dB-1, dB0, dB1, dB2, dB3, dB4, dB5,
                                        dB6, dB8, dB10, dB12, dB14, dB16, dB18,
                                        dB20, dB22, dB24}

-- TAG-EUTRA-Q-OFFSETRANGE-STOP
-- ASN1STOP
```

– *IAB-IP-Address*

The IE *IAB-IP-Address* is used to indicate the IP address/prefix.

IAB-IP-Address information element

```
-- ASN1START
-- TAG-IABIPADDRESS-START

IAB-IP-Address-r16 ::=  CHOICE {
    iPv4-Address-r16              BIT STRING (SIZE(32)),
    iPv6-Address-r16              BIT STRING (SIZE(128)),
    iPv6-Prefix-r16               BIT STRING (SIZE(64)),
    ...
}

-- TAG-IABIPADDRESS-STOP
-- ASN1STOP
```

***IAB-IP-Address* field descriptions**
iPv4-Address This field is used to provide the allocated IPv4 address.
iPv6-Address This field is used to provide the allocated IPv6 address.
iPv6-Prefix This field is used to provide the allocated IPv6 prefix.

– *IAB-IP-AddressIndex*

The IE *IAB-IP-AddressIndex* is used to identify a configuration of an IP address.

IAB-IP-AddressIndex information element

```
-- ASN1START
-- TAG-IABIPADDRESSINDEX-START

IAB-IP-AddressIndex-r16 ::= INTEGER (1..maxIAB-IP-Address-r16)

-- TAG-IABIPADDRESSINDEX-STOP
-- ASN1STOP
```

– *IAB-IP-Usage*

The IE *IAB-IP-Usage* is used to indicate the usage of the assigned IP address/prefix.

IAB-IP-Usage information element

```
-- ASN1START
-- TAG-IAB-IP-USAGE-START

IAB-IP-Usage-r16 ::= ENUMERATED {f1-C, f1-U, non-F1, spare}

-- TAG-IAB-IP-USAGE-STOP
-- ASN1STOP
```

– *LoggingDuration*

The *LoggingDuration* indicates the duration for which UE is requested to perform measurement logging. Value min10 corresponds to 10 minutes, value min20 corresponds to 20 minutes and so on.

LoggingDuration information element

```
-- ASN1START
-- TAG-LOGGINGDURATION-START

LoggingDuration-r16 ::=   ENUMERATED {
                          min10, min20, min40, min60, min90, min120, spare2, spare1}

-- TAG-LOGGINGDURATION-STOP
-- ASN1STOP
```

– *LoggingInterval*

The *LoggingInterval* indicates the periodicity for logging measurement results. Value ms1280 corresponds to 1.28s, value ms2560 corresponds to 2.56s and so on. Value infinity means it is equal to the configured value of the *LoggingDuration* IE.

LoggingInterval information element

```
-- ASN1START
-- TAG-LOGGINGINTERVAL-START

LoggingInterval-r16 ::=   ENUMERATED {
                          ms320, ms640, ms1280, ms2560, ms5120, ms10240, ms20480,
                          ms30720, ms40960, ms61440 , infinity}

-- TAG-LOGGINGINTERVAL-STOP
-- ASN1STOP
```

– *LogMeasResultListBT*

The IE *LogMeasResultListBT* covers measured results for Bluetooth.

LogMeasResultListBT information element

```
-- ASN1START
-- TAG-LOGMEASRESULTLISTBT-START

LogMeasResultListBT-r16 ::= SEQUENCE (SIZE (1..maxBT-IdReport-r16)) OF LogMeasResultBT-r16

LogMeasResultBT-r16 ::= SEQUENCE {
```

```
    bt-Addr-r16           BIT STRING (SIZE (48)),
    rssi-BT-r16           INTEGER (-128..127)       OPTIONAL,
    ...
}

-- TAG-LOGMEASRESULTLISTBT-STOP
-- ASN1STOP
```

***LogMeasResultListBT* field descriptions**
bt-Addr This field indicates the Bluetooth public address of the Bluetooth beacon as defined in TS 37.355 [49].
rssi-BT This field provides the beacon received signal strength indicator (RSSI) in dBm as defined in TS 37.355 [49].

– *LogMeasResultListWLAN*

The IE *LogMeasResultListWLAN* covers measured results for WLAN.

***LogMeasResultListWLAN* information element**

```
-- ASN1START
-- TAG-LOGMEASRESULTLISTWLAN-START

LogMeasResultListWLAN-r16 ::=    SEQUENCE (SIZE (1..maxWLAN-Id-Report-r16)) OF LogMeasResultWLAN-r16

LogMeasResultWLAN-r16 ::=       SEQUENCE {
    wlan-Identifiers-r16          WLAN-Identifiers-r16,
    rssiWLAN-r16                  WLAN-RSSI-Range-r16        OPTIONAL,
    rtt-WLAN-r16                  WLAN-RTT-r16              OPTIONAL,
    ...
}

WLAN-Identifiers-r16 ::=        SEQUENCE {
    ssid-r16                      OCTET STRING (SIZE (1..32))  OPTIONAL,
    bssid-r16                     OCTET STRING (SIZE (6))     OPTIONAL,
    hessid-r16                    OCTET STRING (SIZE (6))     OPTIONAL,
    ...
}

WLAN-RSSI-Range-r16 ::= INTEGER(0..141)

WLAN-RTT-r16 ::=              SEQUENCE {
    rttValue-r16                  INTEGER (0..16777215),
    rttUnits-r16                  ENUMERATED {
                                    microseconds,
                                    hundredsofnanoseconds,
```

```
                                tensofnanoseconds,
                                nanoseconds,
                                tenthsofnanoseconds,
                                ...},
   rttAccuracy-r16              INTEGER (0..255)          OPTIONAL,
   ...
}

-- TAG-LOGMEASRESULTLISTWLAN-STOP
-- ASN1STOP
```

***LogMeasResultListWLAN* field descriptions**
bssid Basic Service Set Identifier (BSSID) defined in IEEE 802.11-2012 [50].
hessid Homogenous Extended Service Set Identifier (HESSID) defined in IEEE 802.11-2012 [50].
rssiWLAN Measured WLAN RSSI result in dBm. The IE WLAN-RSSI-Range specifies the value range used in WLAN RSSI measurements and thresholds. Integer value for WLAN RSSI measurements is according to mapping table in TS 36.133 [40]. Value 0 corresponds to –infinity, value 1 to -100dBm, value 2 to -99dBm, and so on (i.e. in steps of 1dBm) until value 140, which corresponds to 39dBm, while value 141 corresponds to +infinity.
rtt-WLAN This field provides the measured roundtrip time between the target device and WLAN AP and optionally the accuracy expressed as the standard deviation of the delay. Units for each of these are 1000ns, 100ns, 10ns, 1ns, and 0.1ns as defined in TS 37.355 [49].
rttValue This field specifies the Round Trip Time (RTT) measurement between the target device and WLAN AP in units given by the field rttUnits as defined in TS 37.355 [49].
rttUnits This field specifies the Units for the fields rttValue and rttAccuracy. The available Units are 1000ns, 100ns, 10ns, 1ns, and 0.1ns as defined in TS 37.355 [49].
rttAccuracy This field provides the estimated accuracy of the provided rttValue expressed as the standard deviation in units given by the field rttUnits as defined in TS 37.355 [49].
ssid Service Set Identifier (SSID) defined in IEEE 802.11-2012 [50].
wlan-Identifiers Indicates the WLAN parameters used for identification of the WLAN for which the measurement results are applicable.

– *MeasConfigAppLayerId*

The IE *MeasConfigAppLayerId* identifies the application layer measurement.

***MeasConfigAppLayerId* information element**

```
-- ASN1START
-- TAG-MEASCONFIGAPPLAYERID-START
```

```
MeasConfigAppLayerId-r17 ::= INTEGER (0..maxNrofAppLayerMeas-1-r17)

-- TAG-MEASCONFIGAPPLAYERID-STOP
-- ASN1STOP
```

– *OtherConfig*

The IE *OtherConfig* contains configuration related to miscellaneous other configurations.

OtherConfig information element

```
-- ASN1START
-- TAG-OTHERCONFIG-START

OtherConfig ::=              SEQUENCE {

***OtherConfig* field descriptions**
aerial-FlightPathAvailabilityConfig Configuration for the UE to indicate the availability of flight path information for Aerial UE operation.
applicabilityConfigCellId Indicates the serving cell that the *applicabilitySetConfigCSI-List* refers to.
applicabilityReportConfig Configuration for the UE to indicate the applicability of configurations subject to the applicability determination procedure.
applicabilitySetConfigId Indicates the ID of a set of prediction related parameters.
applicabilitySetConfigCSI-ToAddModList Indicates for each serving cell the list of sets of prediction related parameters configured for UE applicability reporting.
bfd-RelaxationReportingConfig Configuration for the UE to report the relaxation state of BFD measurements.
btNameList Configuration for the UE to report measurements from specific Bluetooth beacons. NG-RAN configures the field if *includeBT-Meas* is configured for one or more measurements.
candidateBandwidth Indicates the bandwidth of the candidate frequency range around the center frequency.
candidateCenterFreq Indicates the center frequency of the candidate frequency range.
candidateServingFreqListNR Indicates for each candidate NR serving cells, the center frequency around which UE is requested to report IDC issues.
candidateServingFreqRangeListNR Indicates the candidate frequency range with the combination of the center frequency and the candidate bandwidth, around which the UE is requested to report IDC issues.
closestLocsToReport Indicates the number of closest reference locations the UE should indicate for assisted SMTC and measurement gap configuration in RRC_CONNECTED state.
codebookConfig Codebook configuration. If this field is included, its *codebookType* can only be set to *typeII-Doppler-r18*.
connectedReporting Indicates that the UE can report a preference to remain in RRC_CONNECTED state following a report to leave RRC_CONNECTED state. If absent, the UE cannot report a preference to stay in RRC_CONNECTED state.
dataCollectionCandidateConfigId Indicates the ID of a candidate configuration for UE-side data collection.
dataCollectionCandidateConfigToAddModList Indicates for each serving cell the list of candidate radio resources configured for UE-side data collection. The UE is not expected to perform measurements solely based on the configurations provided by this IE.
dataCollectionPreferenceConfig Configuration for the UE to report its preference to be configured with radio resources for UE-side data collection.
dataCollectionServCellIndex Index of the serving cell that the *dataCollectionCandidateConfigParameterList* refers to.
delayBudgetReportingProhibitTimer Prohibit timer for delay budget reporting. Value in seconds. Value *s0* means prohibit timer is set to 0 seconds, value *s0dot4* means prohibit timer is set to 0.4 seconds, and so on.

disableApplicabilityCSI-ReportConfig If present, the UE does not report the applicability for configured *reportConfigId* associated to a *CSI-ReportConfig* including *configurationForBM-PredictionAndDataCollection* with *reportQuantity-r19* set to *p-CRI-r19* or *p-SSB-Index-r19* or *p-CRI-RSRP-r19* or *p-SSB-Index-RSRP-r19*. NOTE: The network implementation is expected to ensure that the UE is able to report applicability updates for the configured *reportConfigId* associated to a *CSI-ReportConfig* including *configurationForBM-PredictionAndDataCollection* with *reportQuantity-r19* set to *p-CRI-r19* or *p-SSB-Index-r19* or *p-CRI-RSRP-r19* or *p-SSB-Index-RSRP-r19*.
drx-PreferenceConfig Configuration for the UE to report assistance information to inform the gNB about the UE's DRX preferences for power saving.
drx-PreferenceProhibitTimer Prohibit timer for DRX preferences assistance information reporting. Value in seconds. Value *s0* means prohibit timer is set to 0 seconds, value *s0dot5* means prohibit timer is set to 0.5 seconds, value *s1* means prohibit timer is set to 1 second and so on.
fbs-PreferenceReportingConfig Configuration for the UE to report its preference on L3 fast beam sweeping operation. Network only configures this field when the UE is configured with *fbs-Config*.
fbs-PreferenceReportingConfigProhibitTimer Prohibit timer for UE preference reporting on L3 fast beam sweeping operation. Value in seconds. Value *s0* means prohibit timer is set to 0 seconds, value *s0dot5* means prohibit timer is set to 0.5 seconds, value *s1* means prohibit timer is set to 1 second and so on.
gapOccasionCancelRatioProhibitTimer Prohibit timer for transmitting the assistance information of gap occasion cancellation ratio. Value *s0* means prohibit timer is set to 0 seconds, value *s0dot5* means prohibit timer is set to 0.5 seconds, value *s1* means prohibit timer is set to 1 second and so on.
gapOccasionCancelRatioReportConfig Configuration for the UE to report preference for gap occasion cancellation ratio.
idc-AssistanceConfig Configuration for the UE to report assistance information to inform the gNB about UE detected IDC problem.
loggedDataCollectionAssistanceConfig Configuration for the UE to report assistance information related to logging of radio measurements for network-side data collection. When configured with *loggedDataCollectionAssistanceConfig* the UE reports that it has logged radio measurements for network-side data collection when the memory reserved for logging of radio measurements for network-side data collection has become full and it reports when it determines that it has entered a low power state.
loggedDataCollectionMemoryThreshold Memory threshold for the UE to report that it has logged radio measurements for network-side data collection, if the amount of data in the memory reserved for logging of radio measurements for network-side data collection has become equal to or above this threshold. Value *kB16* means the threshold is set to 16 kB and so on.
lpwus-OffsetPreferenceConfig Configuration for the UE to report assistance information to inform the gNB about the UE's preferred time offset for LP-WUS monitoring for RRC_CONNECTED mode.
lpwus-OffsetPreferenceProhibitTimer Prohibit timer for offset preferences assistance information reporting for LP-WUS monitoring. Value in seconds. Value *s0* means prohibit timer is set to 0 seconds, value *s0dot5* means prohibit timer is set to 0.5 seconds, value *s1* means prohibit timer is set to 1 second and so on.
maxBW-PreferenceConfig Configuration for the UE to report assistance information to inform the gNB about the UE's preferred bandwidth for power saving.
maxBW-PreferenceProhibitTimer Prohibit timer for preferred bandwidth assistance information reporting. Value in seconds. Value *s0* means prohibit timer is set to 0 seconds, value *s0dot5* means prohibit timer is set to 0.5 seconds, value *s1* means prohibit timer is set to 1 second and so on.
maxCC-PreferenceConfig Configuration for the UE to report assistance information to inform the gNB about the UE's preferred number of carriers for power saving.
maxBW-PreferenceConfigFR2-2 Configuration for the UE to report assistance information to inform the gNB about the UE's preferred bandwidth for power saving for FR2-2.

maxCC-PreferenceProhibitTimer Prohibit timer for preferred number of carriers assistance information reporting. Value in seconds. Value *s0* means prohibit timer is set to 0 seconds, value *s0dot5* means prohibit timer is set to 0.5 seconds, value *s1* means prohibit timer is set to 1 second and so on.
maxMIMO-LayerPreferenceConfig Configuration for the UE to report assistance information to inform the gNB about the UE's preferred number of MIMO layers for power saving.
maxMIMO-LayerPreferenceConfigFR2-2 Configuration for the UE to report assistance information to inform the gNB about the UE's preferred number of MIMO layers for power saving for FR2-2.
maxMIMO-LayerPreferenceProhibitTimer Prohibit timer for preferred number of number of MIMO layers assistance information reporting. Value in seconds. Value *s0* means prohibit timer is set to 0 seconds, value *s0dot5* means prohibit timer is set to 0.5 seconds, value *s1* means prohibit timer is set to 1 second and so on.
minSchedulingOffsetPreferenceConfig Configuration for the UE to report assistance information to inform the gNB about the UE's preferred *minimumSchedulingOffset* value for cross-slot scheduling for power saving.
minSchedulingOffsetPreferenceConfigExt Configuration for the UE to report assistance information to inform the gNB about the UE's preferred *minimumSchedulingOffset* value for cross-slot scheduling for power saving for SCS 480 kHz and/or 960 kHz.
minSchedulingOffsetPreferenceProhibitTimer Prohibit timer for preferred *minimumSchedulingOffset* assistance information reporting. Value in seconds. Value *s0* means prohibit timer is set to 0 seconds, value *s0dot5* means prohibit timer is set to 0.5 seconds, value *s1* means prohibit timer is set to 1 second and so on.
multiRx-PreferenceReportingConfigFR2 Configuration for the UE to report assistance information to inform gNB about the UE's preference on multi-Rx operation for FR2.
multiRx-PreferenceReportingConfigFR2ProhibitTimer Prohibit timer for multi-Rx operation preference reporting for FR2. Value in seconds. Value *s0* means prohibit timer is set to 0 seconds, value *s0dot5* means prohibit timer is set to 0.5 seconds, value *s1* means prohibit timer is set to 1 second and so on.
musim-CandidateBandList A list of candidate bands that the network intends to use, e.g., for serving cells and for which the UE is requested to provide information on temporary restricted capabilities for MUSIM operation as specified in clause 5.7.4.3.
musim-GapAssistanceConfig Configuration for the UE to report assistance information for gap preference.
musim-GapPriorityAssistanceConfig Indicates the UE is allowed to provide MUSIM assistance information for gap(s) priority and/or MUSIM gaps keep preference.
musim-GapProhibitTimer Prohibit timer for MUSIM assistance information reporting for gap preference.
musim-LeaveAssistanceConfig Configuration for the UE to report assistance information for leaving RRC_CONNECTED for MUSIM purpose.
musim-LeaveWithoutResponseTimer Indicates the timer for the UE to enter RRC_IDLE for MUSIM purpose as defined in clause 5.3.8.6.
musim-ProhibitTimer Indicates the prohibit timer for UE temporary restricted capabilities for MUSIM operation. Value in milliseconds. Value *ms0* means prohibit timer is set to 0 milliseconds, value *ms10* means prohibit timer is set to 10 milliseconds and so on.
musim-WaitTimer Indicates the wait timer for UE temporary restricted capabilities for MUSIM operation. Value in milliseconds. Value *ms10* means wait timer is set to 10 milliseconds, value *ms20* means wait timer is set to 20 milliseconds and so on.

obtainCommonLocation Requests the UE to attempt to have detailed location information available using GNSS. NR configures the field if *includeCommonLocationInfo* is configured for one or more measurements.
overheatingAssistanceConfig Configuration for the UE to report assistance information to inform the gNB about UE detected internal overheating.
overheatingIndicationProhibitTimer Prohibit timer for overheating assistance information reporting. Value in seconds. Value *s0* means prohibit timer is set to 0 seconds, value *s0dot5* means prohibit timer is set to 0.5 seconds, value *s1* means prohibit timer is set to 1 second and so on.
parameters Indicates the parameters for a candidate UE-side data collection configuration.
parametersForBM Indicates the parameters for a candidate UE-side data collection configuration for beam management.
parametersForCSI-InferencePrediction Indicates the parameters for a candidate UE-side data collection configuration for CSI prediction.
pdu-SessionsToReportUL-TrafficInfoList A list of PDU sessions for which the UE shall report UL traffic information.
propDelayDiffReportConfig Configuration for the UE to report service link propagation delay difference between serving cell and neighbour cell(s).
qfi-ToReportUL-TrafficInfoList A list of QFIs of a PDU session for which the UE shall report UL traffic information.
referenceTimePreferenceReporting If present, the field indicates the UE is configured to provide reference time assistance information.
refLocList A list of reference locations for assisted SMTC and measurement gap configuration in RRC_CONNECTED state. If this field is absent when *closestLocsToReport* is signalled, the UE shall use the *refLocList* provided in *SIB19*, if available.
releasePreferenceConfig Configuration for the UE to report assistance information to inform the gNB about the UE's preference to leave RRC_CONNECTED state.
releasePreferenceProhibitTimer Prohibit timer for release preference assistance information reporting. Value in seconds. Value *s0* means prohibit timer is set to 0 seconds, value *s0dot5* means prohibit timer is set to 0.5 seconds, value *s1* means prohibit timer is set to 1 second and so on. Value *infinity* means that once a UE has reported a release preference, the UE cannot report a release preference again during the RRC connection.
rlm-RelaxationReportingConfig Configuration for the UE to report the relaxation state of RLM measurements.
s-SearchDeltaP-Stationary Parameter "$S_{SearchDeltaP\text{-}StationaryConnected}$" in 5.7.4.4. Value dB2 corresponds to 2 dB, dB3 corresponds to 3 dB and so on.
scg-DeactivationPreferenceConfig Configuration of the UE to indicate its preference for SCG deactivation.
scg -StatePreferenceProhibitTimer Prohibit timer for UE indication of its preference for SCG deactivation. Value in seconds. Value *s0* means prohibit timer is set to 0 seconds, value *s1* means prohibit timer is set to 1 second and so on.
sensorNameList Configuration for the UE to report measurements from specific sensors. NG-RAN configures the field if *includeSensor-Meas* is configured for one or more measurements.

sl-AssistanceConfigNR Indicate whether UE is configured to provide configured grant assistance information for NR sidelink communication.
sl-PRS-AssistanceConfigNR Indicate whether UE is configured to provide configured grant assistance information for NR sidelink positioning.
sn-InitiatedPSCellChange This field indicates whether the PSCell change procedure or the CPC included in the *RRCReconfiguration* message is SN initiated or not. In case of SN initiated inter-SN PSCell change procedure or SN configured inter-SN CPC, MN includes this field in the MCG RRC Reconfiguration message. In case of intra-SN PSCell change, or intra-SN CPC, source SN includes the field in the SCG RRC Reconfiguration.
sourceDAPS-FailureReporting This field indicates whether the UE shall generate the SHR upon successfully completing the DAPS handover to the target cell and if a radio link failure was experienced in the source PCell while executing the DAPS handover. This field is set in the *otherConfig* configured by the source cell of the DAPS handover.
successHO-Config Configuration for the UE to report the successful handover information to the network.
successPSCell-Config Configuration for the UE to report the successful PSCell change or addition information to the network. When this field is configured in CG-Config, the *thresholdPercentageT304-SCG* is absent.
t-SearchDeltaP-Stationary Parameter "$T_{SearchDeltaP\text{-}StationaryConnected}$" in 5.7.4.4. Value in seconds. Value s5 means 5 seconds, value s10 means 10 seconds and so on.
thresholdPercentageT304 This field indicates the threshold for the ratio in percentage between the elapsed T304 timer and the configured value of the T304 timer. Value *p40* corresponds to 40%, value *p60* corresponds to 60% and so on. This field is set in the *otherConfig* configured by the target cell of the handover.
thresholdPercentageT310 This field indicates the threshold for the ratio in percentage between the elapsed T310 timer and the configured value of the T310 timer. Value *p40* corresponds to 40%, value *p60* corresponds to 60% and so on. This field is set in the *otherConfig* configured by the source cell of the handover.
thresholdPercentageT312 This field indicates the threshold for the ratio in percentage between the elapsed T312 timer and the configured value(s) of the T312 timer. Value *p20* corresponds to 20%, value *p40* corresponds to 40% and so on. This field is set in the *otherConfig* configured by the source cell of the handover.
thresholdPercentageT304-SCG This field indicates the threshold for the ratio in percentage between the elapsed T304 timer associated to the target PSCell and the configured value of the T304 timer. Value *p40* corresponds to 40%, value *p60* corresponds to 60% and so on. This field is set in the *otherConfig* configured by the target PSCell of the PSCell change or addition.
thresholdPercentageT310-SCG This field indicates the threshold for the ratio in percentage between the elapsed T310 timer associated to the source PSCell and the configured value of the T310 timer. Value *p40* corresponds to 40%, value *p60* corresponds to 60% and so on. This field is set in the *otherConfig* configured by the source PSCell of the PSCell change or CPC, or in the *otherConfig* configured by the PCell for the PSCell change or CPC. This field is not configured at the time of PSCell change via SRB3.
thresholdPercentageT312-SCG This field indicates the threshold for the ratio in percentage between the elapsed T312 timer associated to the measurement identity of the target PSCell and the configured value of the T312 timer. Value *p20* corresponds to 20%, value *p40* corresponds to 40% and so on. This field is set in the *otherConfig* configured by the source PSCell of the PSCell change or CPC, or in the *otherConfig* configured by the PCell for the PSCell change or CPC. This field is not configured at the time of PSCell change via SRB3.
threshPropDelayDiff Threshold for one-way service link propagation delay difference report as specified in 5.7.4.2.
ul-GapFR2-PreferenceConfig Indicates whether UE is configured to request for FR2 UL gap activation/deactivation and preferred FR2 UL gap pattern.
wlanNameList Configuration for the UE to report measurements from specific WLAN APs. NG-RAN configures the field if *includeWLAN-Meas* is configured for one or more measurements.

ul-TrafficInfoProhibitTimer Prohibit timer for UL traffic information reporting. Value in seconds. Value *s0* means prohibit timer is set to 0 seconds, value *s0dot5* means prohibit timer is set to 0.5 seconds, value *s1* means prohibit timer is set to 1 second and so on.
ul-TrafficInfoReportingConfig Configuration for the UE to report UL traffic information.

Conditional Presence	Explanation
FDM	This field is optionally present, need R, if *idc-AssistanceConfig-r16* or *idc-FDM-AssistanceConfig* is setup. Otherwise, it is absent, need R.
maxBW	This field is optionally present, need R, if *maxBW-PreferenceConfig-r16* is setup; otherwise it is absent, need R.
maxMIMO	This field is optionally present, need R, if *maxMIMO-LayerPreferenceConfig-r16* is setup; otherwise it is absent, need R.
minOffset	This field is optionally present, need R, if *minSchedulingOffsetPreferenceConfig-r16* is setup; otherwise it is absent, need R.
musimGapConfig	This field is optionally present, need R, if *musim-GapAssistanceConfig-r17* is setup; otherwise it is absent, need R.
SCG	This field is optionally present, need M, in an *RRCReconfiguration* message not within *mrdc-SecondaryCellGroup* and received, either via SRB3 within *DLInformationTransferMRDC* or via SRB1. Otherwise, it is absent.

– *PhysCellIdUTRA-FDD*

The IE *PhysCellIdUTRA-FDD* is used to indicate the physical layer identity of the cell, i.e. the primary scrambling code, as defined in TS 25.331 [45].

PhysCellIdUTRA-FDD information element

```
-- ASN1START
-- TAG-PHYSCELLIDUTRA-FDD-START

PhysCellIdUTRA-FDD-r16 ::=      INTEGER (0..511)

-- TAG-PHYSCELLIDUTRA-FDD-STOP
-- ASN1STOP
```

– *RRC-TransactionIdentifier*

The IE *RRC-TransactionIdentifier* is used, together with the message type, for the identification of an RRC procedure (transaction).

RRC-TransactionIdentifier information element

```
-- ASN1START
-- TAG-RRC-TRANSACTIONIDENTIFIER-START

RRC-TransactionIdentifier ::=      INTEGER (0..3)

-- TAG-RRC-TRANSACTIONIDENTIFIER-STOP
```

```
-- ASN1STOP
```

– *Sensor-NameList*

The IE *Sensor-NameList* is used to indicate the names of the sensors which the UE is configured to measure.

***Sensor-NameList* information element**

```
-- ASN1START
-- TAG-SENSORNAMELIST-START

Sensor-NameList-r16 ::= SEQUENCE {
    measUncomBarPre-r16     ENUMERATED {true}          OPTIONAL,  -- Need R
    measUeSpeed             ENUMERATED {true}          OPTIONAL,  -- Need R
    measUeOrientation       ENUMERATED {true}          OPTIONAL   -- Need R
}

-- TAG-SENSORNAMELIST-STOP
-- ASN1STOP
```

***Sensor-NameList* field descriptions**
measUncomBarPre If configured, the UE reports the uncompensated Barometric pressure measurement as defined in TS 37.355 [49].
measUeSpeed If configured, the UE reports the UE speed measurement as defined in TS 37.355 [49].
measUeOrientation If configured, the UE reports the UE orientation information as defined in TS 37.355 [49].

– *TraceReference*

The *TraceReference* contains parameter Trace Reference as defined in TS 32.422 [52].

***TraceReference* information element**

```
-- ASN1START
-- TAG-TRACEREFERENCE-START

TraceReference-r16 ::= SEQUENCE {
    plmn-Identity-r16     PLMN-Identity,
    traceId-r16           OCTET STRING (SIZE (3))
}

-- TAG-TRACEREFERENCE-STOP
```

```
-- ASN1STOP
```

– *UE-MeasurementsAvailable*

The IE *UE-MeasurementsAvailable* is used to indicate all relevant available indicators for UE measurements.

UE-MeasurementsAvailable information element

```
-- ASN1START
-- TAG-UE-MeasurementsAvailable-START

UE-MeasurementsAvailable-r16 ::=            SEQUENCE {
    logMeasAvailable-r16                     ENUMERATED {true}            OPTIONAL,
    logMeasAvailableBT-r16                   ENUMERATED {true}            OPTIONAL,
    logMeasAvailableWLAN-r16                 ENUMERATED {true}            OPTIONAL,
    connEstFailInfoAvailable-r16              ENUMERATED {true}            OPTIONAL,
    rlf-InfoAvailable-r16                    ENUMERATED {true}            OPTIONAL,
    ...,
    [[
    successHO-InfoAvailable-r17               ENUMERATED {true}            OPTIONAL,
    sigLogMeasConfigAvailable-r17             BOOLEAN                      OPTIONAL
    ]],
    [[
    successPSCell-InfoAvailable-r18           ENUMERATED {true}            OPTIONAL
    ]]

}

-- TAG-UE-MeasurementsAvailable-STOP
-- ASN1STOP
```

– *UTRA-FDD-Q-OffsetRange*

The IE *UTRA-FDD-Q-OffsetRange* is used to indicate a frequency specific offset to be applied when evaluating triggering conditions for measurement reporting. The value is in dB. Value *dB-24* corresponds to -24 dB, value *dB-22* corresponds to -22 dB and so on.

UTRA-FDD-Q-OffsetRange information element

```
-- ASN1START
-- TAG-UTRA-FDD-Q-OFFSETRANGE-START

UTRA-FDD-Q-OffsetRange-r16 ::=           ENUMERATED {
                                        dB-24, dB-22, dB-20, dB-18, dB-16, dB-14,
                                        dB-12, dB-10, dB-8, dB-6, dB-5, dB-4, dB-3,
                                        dB-2, dB-1, dB0, dB1, dB2, dB3, dB4, dB5,
                                        dB6, dB8, dB10, dB12, dB14, dB16, dB18,
```

```
                                        dB20, dB22, dB24}

-- TAG-UTRA-FDD-Q-OFFSETRANGE-STOP
-- ASN1STOP
```

– *VisitedCellInfoList*

The IE *VisitedCellInfoList* includes the mobility history information of maximum of 16 most recently visited primary cells or time spent in any cell selection state and/or camped on any cell state in NR or E-UTRA and, in case of Dual Connectivity, the mobility history information of *maxPSCellHistory* most recently visited primary secondary cell group cells across all the primary cells included in the *VisitedCellInfoList*. The most recently visited cell is stored first in the list. The list includes cells visited in RRC_IDLE, RRC_INACTIVE and RRC_CONNECTED states for NR and RRC_IDLE and RRC_CONNECTED for E-UTRA.

VisitedCellInfoList information element

```
-- ASN1START
-- TAG-VISITEDCELLINFOLIST-START

VisitedCellInfoList-r16 ::= SEQUENCE (SIZE (1..maxCellHistory-r16)) OF VisitedCellInfo-r16

VisitedCellInfo-r16 ::=  SEQUENCE {
   visitedCellId-r16       CHOICE {
      nr-CellId-r16          CHOICE {
         cgi-Info              CGI-Info-Logging-r16,
         pci-arfcn-r16          PCI-ARFCN-NR-r16
      },
      eutra-CellId-r16       CHOICE {
         cellGlobalId-r16       CGI-InfoEUTRA,
         pci-arfcn-r16             PCI-ARFCN-EUTRA-r16
      }
   }                                                                  OPTIONAL,
   timeSpent-r16          INTEGER (0..4095),
   ...,
   [[
   visitedPSCellInfoListReport-r17   VisitedPSCellInfoList-r17              OPTIONAL
   ]]
}

VisitedPSCellInfoList-r17 ::= SEQUENCE (SIZE (1..maxPSCellHistory-r17)) OF VisitedPSCellInfo-r17

VisitedPSCellInfo-r17 ::=   SEQUENCE {

   ]]
}

-- TAG-VISITEDCELLINFOLIST-STOP
-- ASN1STOP
```

***VisitedCellInfoList* field descriptions**
scgActiveDuration This field indicates the accumulated SCG active duration of stay in the PSCell. Value in seconds. If the duration of activation exceeds 4095 seconds, the UE shall set it to 4095 seconds.
timeSpent This field indicates the duration of stay in the cell or in any cell selection state and/or camped on any cell state in NR or E-UTRA approximated to the closest second. If included in *VisitedPSCellInfo*, it indicates the duration of stay in the PSCell or without any PSCell. If the duration of stay exceeds 4095s, the UE shall set it to 4095s.
visitedCellId This field indicates the visited cell id including NR and E-UTRA cells.

– *WLAN-NameList*

The IE *WLAN-NameList* is used to indicate the names of the WLAN AP for which the UE is configured to measure.

WLAN-NameList information element

```
-- ASN1START
-- TAG-WLANNAMELIST-START

WLAN-NameList-r16 ::= SEQUENCE (SIZE (1..maxWLAN-Name-r16)) OF WLAN-Name-r16

WLAN-Name-r16 ::= OCTET STRING (SIZE (1..32))

-- ASN1STOP
-- TAG-WLANNAMELIST-STOP
```

***WLAN-NameList* field descriptions**
WLAN-Name If configured, the UE only performs WLAN measurements according to the names identified. For each name, it refers to Service Set Identifier (SSID) defined in IEEE 802.11-2012 [50].

6.3.5 Sidelink information elements

– *SL-BWP-Config*

The IE *SL-BWP-Config* is used to configure the UE specific NR sidelink communication/discovery/positioning on one particular sidelink bandwidth part.

***SL-BWP-Config* information element**

```
-- ASN1START
-- TAG-SL-BWP-CONFIG-START

SL-BWP-Config-r16 ::=                SEQUENCE {
    sl-BWP-Id                         BWP-Id,
    sl-BWP-Generic-r16                  SL-BWP-Generic-r16                                  OPTIONAL,  -- Need M
    sl-BWP-PoolConfig-r16               SL-BWP-PoolConfig-r16                               OPTIONAL,  -- Need M
    ...,
    [[
    sl-BWP-PoolConfigPS-r17           SetupRelease {SL-BWP-PoolConfig-r16}                    OPTIONAL,  -- Need M
    sl-BWP-DiscPoolConfig-r17         SetupRelease {SL-BWP-DiscPoolConfig-r17}                OPTIONAL   -- Need M
    ]],
    [[
    sl-BWP-PoolConfigA2X-r18          SetupRelease {SL-BWP-PoolConfig-r16}                    OPTIONAL,  -- Need M
    sl-BWP-PRS-PoolConfig-r18         SetupRelease {SL-BWP-PRS-PoolConfig-r18}                OPTIONAL   -- Need M
    ]]
}

SL-BWP-Generic-r16 ::=               SEQUENCE {
    sl-BWP-r16                        BWP                                                 OPTIONAL,    -- Need M

***SL-BWP-Config* field descriptions**
sl-BWP-DiscPoolConfig This field indicates the NR sidelink discovery dedicated resource pool configurations on the configured sidelink BWP. The total number of Rx/Tx resource pools configured for communication and discovery does not exceed the maximum number of Rx/Tx resource pool for NR sidelink communication (i.e. *maxNrofRXPool-r16/maxNrofTXPool-r16*).
sl-BWP-Generic This field indicates the generic parameters on the configured sidelink BWP.
sl-BWP-Id An identifier for this sidelink bandwidth part.
sl-BWP-PoolConfig This field indicates the resource pool configurations on the configured sidelink BWP.
sl-BWP-PoolConfigA2X This field indicates the resource pool configurations for A2X services on the configured sidelink BWP. This field does not include *sl-TxPoolScheduling*. This field does not include *sl-TxPoolExceptional*.
sl-BWP-PoolConfigPS This field indicates the resource pool configurations for power saving on the configured sidelink BWP. This field does not include *sl-TxPoolExceptional*.
sl-BWP-PRS-PoolConfig This field indicates the dedicated SL-PRS resource pool configurations for SL-PRS on the configured sidelink BWP. This field does not include *sl-PRS-TxPoolExceptional*. Dedicated SL-PRS resource pool is not expected to be configured in the slots colliding with the slots (pre)configured for any other resource pool(s) or S-SSB resource(s) in other SL carriers.

***SL-BWP-Generic* field descriptions**
sl-LengthSymbols This field indicates the number of symbols used for sidelink in a slot without S-SSB. A single value can be (pre)configured per sidelink bandwidth part.
sl-StartSymbol This field indicates the starting symbol used for sidelink in a slot without S-SSB. A single value can be (pre)configured per sidelink bandwidth part.
sl-Unlicensed This field indicates the configurations for sidelink carrier of shared spectrum channel access. This field is not expected to be provided when *sl-FreqInfoListSizeExt* or *sl-PreconfigFreqInfoListSizeExt* is present.
sl-TxDirectCurrentLocation The sidelink Tx/Rx Direct Current location for the carrier. Only values in the value range of this field between 0 and 3299, which indicate the subcarrier index within the carrier corresponding to the numerology of the corresponding sidelink BWP and value 3300, which indicates "Outside the carrier" and value 3301, which indicates "Undetermined position within the carrier" are used in this version of the specification.

***SL-Unlicensed* field descriptions**
sl-AbsoluteFrequencySSB-NonAnchorList Indicates the lowest S-SSB in a non-anchor RB set via each parameter in this list. Anchor RB set refers to the RB set where S-SSB indicated by *sl-AbsoluteFrequencySSB-r16* locates.
sl-CPE-StartingPositionS-SSB Indicates the CPE starting position within the last symbol before the start of S-SSB transmission. The value is an index of the set of all candidate CPE starting positions specified in Table 5.3.1-3 of [16, TS 38.211] for Ci=1 and the corresponding SCS of the SL BWP.
sl-CWS-ForPsschWithoutHarqAck The latest CW_p is autonomously increased to the next higher allowed value for every priority class p of {1,2,3,4} if the same CW_p which is different from CW_(max,p) is consecutively used for general of N_init in SL Type 1 LBT for a number of times indicated by this parameter. This operation is restricted only to PSCCH/PSSCH transmission(s) with "HARQ feedback enabled/disabled indicator" in the 2nd stage SCI set to disabled, regardless of whether PSFCH resources being configured in a resource pool.
sl-GapOfAdditionalSSSB-Occasion Indicate the gap between each R16/R17 NR SL S-SSB slot and its first corresponding additional candidate S-SSB occasion, and the gap between adjacent two additional candidate S-SSB occasions corresponding to a R16/R17 NR SL S-SSB slot.
sl-IntraCellGuardBandsSL-List List of intra-cell guard bands for operation with shared spectrum channel access. If not configured, the guard bands are defined according to 38.101-1 [15], see TS 38.214 [19], clause 7. For operation in licensed spectrum, this field is absent, and no UE action is required. NOTE: Value '0' is not expected to be (pre-)configured for *nrofCRBs* when the SL BWP is larger than UE supported RF bandwidth for SL-U operation.
sl-LBT-FailureRecoveryConfig Configures parameters used for detection and cancellation of Sidelink consistent LBT failures for operation with shared spectrum channel access, as specified in TS 38.321 [3].
sl-NumOfAdditionalSSSBOccasion Indicate the number of additional candidate S-SSB occasion(s) for each R16/R17 NR SL S-SSB slot.
sl-SSSBPowerOffsetOfAnchorRBSet Indicate the power offset for one S-SSB transmission on anchor RB set, where anchor RB set refers to the RB set where S-SSB indicated by *sl-AbsoluteFrequencySSB-r16* locates. Value *value1* corresponds to the power offset of 10lg(N), where N is the number of S-SSB repetitions within the anchor RB set, and *value2* corresponds to the power offset of 10lg(W), where W is the maximum total number of S-SSB repetitions on RB sets within the SL-BWP.
sl-StartingSymbolFirst Indicates the location of first starting symbol within a slot. Value *sym0* corresponds to first symbol, value *sym1* corresponds to the second symbol and so on. If the field is not configured, the UE shall use value *sym0*.
sl-StartingSymbolSecond Indicates the location of second starting symbol within a slot. Value *sym3* corresponds to fourth symbol, value *sym4* corresponds to the fifth symbol and so on. The number of symbols used for PSCCH/PSSCH transmission from second starting symbol is not smaller than 6. Within a slot, the second starting symbol is later than the first starting symbol. PSCCH/PSSCH transmission starting from first or second starting symbol shall have the same ending symbol within a slot.
sl-TransmissionStructureForPSCCHandPSSCH Indicate a SL-BWP is (pre-)configured with contiguous RB-based or interlace RB-based PSCCH/PSSCH transmission. Contiguous RB-based PSCCH/PSSCH are applicable in region with no OCB requirement, or with OCB exemption.

– *SL-BWP-ConfigCommon*

The IE *SL-BWP-ConfigCommon* is used to configure the cell-specific configuration information on one particular sidelink bandwidth part.

SL-TxConfigIndex-r16 ::=          INTEGER (0..maxTxConfig-1-r16)

-- TAG-SL-CBR-PRIORITYTXCONFIGLIST-STOP
-- ASN1STOP
```

***SL-CBR-PriorityTxConfigList* field descriptions**
sl-CBR-ConfigIndex Indicates the CBR ranges to be used by an index to the entry of the CBR range configuration in *sl-CBR-RangeConfigList*.
sl-DefaultTxConfigIndex Indicates the PSSCH transmission parameters to be used by the UEs which do not have available CBR measurement results, by means of an index to the corresponding entry in *sl-Tx-ConfigIndexList*. Value 0 indicates the first entry in *sl-Tx-ConfigIndexList*. The field is ignored if the UE has available CBR measurement results.
sl-MCS-RangeList Indicates the minimum MCS value and maximum MCS value for the associated MCS table(s). UE shall ignore the minimum MCS value and maximum MCS value used for table of 64QAM indicated in *SL-CBR-PriorityTxConfigList-r16* if *SL-CBR-PriorityTxConfigList-v1650* is present.
sl-PriorityThreshold Indicates the upper bound of priority range which is associated with the configurations in *sl-CBR-ConfigIndex* and in *sl-Tx-ConfigIndexList*. The upper bounds of the priority ranges are configured in ascending order for consecutive entries of *SL-PriorityTxConfigIndex* in *SL-CBR-PriorityTxConfigList*. For the first entry of S*L-PriorityTxConfigIndex*, the lower bound of the priority range is 1.
SL-CBR-PriorityTxConfigList-v1650 If included, it includes the same number of entries, and listed in the same order, as in *SL-CBR-PriorityTxConfigList-r16*.

– *SL-CBR-CommonTxConfigList*

The IE *SL-CBR-CommonTxConfigList* indicates the list of PSSCH transmission parameters (such as MCS, sub-channel number, retransmission number, CR limit) in *sl-CBR-PSSCH-TxConfigList*, and the list of CBR ranges in *sl-CBR-RangeConfigList*, to configure congestion control to the UE for sidelink communication.

```

***SL-CBR-CommonTxConfigList* field descriptions**
sl-CBR-RangeConfigList Each entry in *sl-CBR-RangeConfigList* is *SL-CBR-LevelsConfig* containing the list of CBR ranges. The values within each *SL-CBR-LevelsConfig* indicate the upper bound of the each CBR range (and implicitly indicate the lower bound of next CBR range) and are configured in ascending order. For the first CBR range of each *SL-CBR-LevelsConfig*, the lower bound of the CBR range is 0. Value 0 corresponds to 0, value 1 to 0.01, value 2 to 0.02, and so on.
sl-CR-Limit Indicates the maximum limit on the occupancy ratio. Value 0 corresponds to 0, value 1 to 0.0001, value 2 to 0.0002, and so on (i.e. in steps of 0.0001) until value 10000, which corresponds to 1.
sl-CBR-PSSCH-TxConfigList Indicates the list of available PSSCH transmission parameters (such as MCS, sub-channel number, retransmission number and CR limit) configurations.
sl-TxParameters Indicates PSSCH transmission parameters.

– *SL-CBR-CommonTxDedicatedSL-PRS-RP-List*

The IE *SL-CBR-CommonTxDedicatedSL-PRS-RP-List* indicates the list of SL PRS transmission parameters (such as Maximum SL PRS transmission power, Maximum Number of SL PRS (re-)transmissions, and CR limit) in *sl-CBR-SL-PRS-TxConfigList*, and the list of CBR ranges in *sl-CBR-RangeDedicatedSL-PRS-RP-List*, to configure congestion control to the UE for sidelink positioning.

***SL-ConfigDedicatedNR* field descriptions**
sl-LBT-SchedulingRequestId Indicates the scheduling request configuration applicable for Sidelink consistent LBT failure report, as specified in TS 38.321 [3].
sl-MaxTransPowerCA The maximum total transmit power to be used by the UE across all sidelink carriers.
sl-MeasConfigInfoToAddModList This field indicates the RSRP measurement configurations for unicast destinations to add and/or modify.
sl-MeasConfigInfoToReleaseList This field indicates the RSRP measurement configurations for unicast destinations to remove.
sl-PHY-MAC-RLC-Config This field indicates the lower layer sidelink radio bearer configurations.
sl-RadioBearerToAddModList This field indicates one or multiple sidelink radio bearer configurations to add and/or modify. This field is not configured to the PC5 connection used for L2 U2N relay operation.
sl-RadioBearerToReleaseList This field indicates one or multiple sidelink radio bearer configurations to remove. This field is not configured to the PC5 connection used for L2 U2N relay operation.

***SL-PHY-MAC-RLC-Config* field descriptions**
networkControlledSyncTx This field indicates whether the UE shall transmit synchronisation information (i.e. become synchronisation source). Value *on* indicates the UE to transmit synchronisation information while value *off* indicates the UE to not transmit such information.
sl-DRX-Config This field indicates the sidelink DRX configuration(s) for unicast, groupcast and/or broadcast communication, as specified in TS 38.321 [3].
sl-MaxNumConsecutiveDTX This field indicates the maximum number of consecutive HARQ DTX before triggering sidelink RLF. Value n1 corresponds to 1, value n2 corresponds to 2, and so on.
sl-FreqInfoToAddModList, sl-FreqInfoToAddModListExt-v16k0, sl-FreqInfoToAddModListExt-v1800 This field indicates the NR sidelink communication configuration on some carrier frequency (ies) to add and/or modify. If the network includes *sl-FreqInfoToAddModListExt-v16k0*, it includes the same number of entries, and listed in the same order, as in *sl-FreqInfoToAddModList-r16*. If the network includes *sl-FreqInfoToAddModListExt-v1800*, it includes the same number of entries, and listed in the same order, as in *sl-FreqInfoToAddModList-r16*.
sl-FreqInfoToReleaseList This field indicates the NR sidelink communication configuration on some carrier frequency (ies) to remove. In this release, only one entry can be configured in the list.
sl-RLC-BearerToAddModList, sl-RLC-BearerToAddModListSizeExt This field indicates one or multiple sidelink RLC bearer configurations to add and/or modify.
sl-RLC-BearerToReleaseList, sl-RLC-BearerToReleaseListSizeExt This field indicates one or multiple sidelink RLC bearer configurations to remove.
sl-RLC-ChannelToAddModList This field indicates one or multiple PC5 Relay RLC Channel configurations to add and/or modify. Each PC5 Relay RLC channel configuration provided by network to L2 U2N Relay UE is uniquely associated with one L2 U2N Remote UE.
sl-RLC-ChannelToReleaseList This field indicates one or multiple PC5 Relay RLC Channel configurations to remove.
sl-ScheduledConfig Indicates the configuration for UE to transmit NR sidelink communication based on network scheduling. This field is not configured simultaneously with sl-UE-SelectedConfig. This field is not configured to a L2 U2N Remote UE.
sl-UE-SelectedConfig Indicates the configuration used for UE autonomous resource selection. This field is not configured simultaneously with *sl-ScheduledConfig*.
sl-CSI-Acquisition Indicates whether CSI reporting is enabled in sidelink unicast. If the field is absent, sidelink CSI reporting is disabled.
sl-CSI-SchedulingRequestId If present, it indicates the scheduling request configuration applicable for Sidelink CSI Reporting MAC CE and Sidelink DRX Command MAC CE, as specified in TS 38.321 [3].
sl-PRS-SchedulingRequestId If present, it indicates the scheduling request configuration applicable for Sidelink PRS Request MAC CE, as specified in TS 38.321 [3].
sl-SSB-PriorityNR This field indicates the priority of NR sidelink SSB transmission and reception.
sl-SyncFreqList Indicates a list of candidate carrier frequencies that can be used for the synchronisation of NR sidelink communication.
sl-SyncTxMultiFreq Indicates that the UE transmits S-SSB on multiple carrier frequencies for NR sidelink communication. If this field is absent, the UE transmits S-SSB only on the synchronisation carrier frequency.

***SL-SCCH-CarrierSetConfig* field descriptions**
sl-AllowedCarrierFreqSet1, sl-AllowedCarrierFreqSet2 Indicates the set of carrier frequencies applicable for the transmission of the MAC SDUs from the sidelink SRB logical channels whose associated destination is included in sl-destinationList. If present, network ensures *sl-AllowedCarrierFreqSet1* and *sl-AllowedCarrierFreqSet2* do not include the same carrier frequency. The value 1 corresponds to the frequency of first entry in *sl-FreqInfoList* broadcast in *SIB12*, the value 2 corresponds to the frequency of first entry in *sl-FreqInfoListSizeExt* broadcast in *SIB12*, the value 3 corresponds to the frequency of second entry in *sl-FreqInfoListSizeExt* broadcast in *SIB12* and so on.
sl-DestinationList This field indicates the list of destination identify that the *sl-AllowedCarrierFreqSet1* and *sl-AllowedCarrierFreqSet2* apply. Only destination identity for unicast link can be included in this field.
sl-SRB-Identity This field indicates the list of sidelink SRB identities that the *sl-AllowedCarrierFreqSet1* and *sl-AllowedCarrierFreqSet2* apply.

Conditional Presence	Explanation
L2RelayUE	For L2 U2N Relay UE, the field is optionally present, Need M. Otherwise, it is absent.
L2RemoteUE	For L2 U2N Remote UE, the field is optionally present, Need M. Otherwise, it is absent.
L2U2N	The field is optional present for L2 U2N or L2 U2U Relay UE and L2 U2N or L2 U2U Remote UE, need N. Otherwise, it is absent.
U2URelayUE	For U2U Relay UE, the field is optionally present, Need M. Otherwise, it is absent.
U2URemoteUE	For U2U Remote UE, the field is optionally present, Need M. Otherwise, it is absent.

– *SL-ConfiguredGrantConfig*

The IE *SL-ConfiguredGrantConfig* specifies the configured grant configuration information for NR sidelink communication.

***SL-ConfiguredGrantConfig* field descriptions**
rrc-ConfiguredSidelinkGrant Configuration for "sidelink configured grant" transmission with fully RRC-configured SL grant (Type1). If this field is not configured, the UE uses SL grant configured by DCI addressed to SL-CS-RNTI (Type2).
sl-ConfigIndexCG This field indicates the ID to identify sidelink configured grant.
sl-CG-MaxTransNumList This field indicates the maximum number of times that a TB can be transmitted using the resources provided by the sidelink configured grant. *sl-Priority* corresponds to the logical channel priority.
sl-FreqResourceCG-Type1 Indicates the frequency resource location of sidelink configured grant type 1. An index giving valid combinations of one or two starting sub-channel and length (jointly encoded) as resource indicator value (RIV), as defined in TS 38.214 [19].
sl-HARQ-ProcID-Offset Indicates the offset used in deriving the HARQ process ID for sidelink configured grant type 1 or sidelink configured grant type 2, see TS 38.321 [3], clause 5.8.3.
sl-N1PUCCH-AN This field indicates the PUCCH resource for HARQ feedback for sidelink configured grant type 1. The actual PUCCH-Resource is configured in *sl-PUCCH-Config* and referred to by its ID.
sl-N1PUCCH-AN-Type2 This field indicates the PUCCH resource for HARQ feedback for PSCCH/PSSCH transmissions without a corresponding PDCCH on sidelink configured grant type 2. The actual PUCCH-Resource is configured in *sl-PUCCH-Config* and referred to by its ID.
sl-NrOfHARQ-Processes This field indicates the number of HARQ processes configured for a specific sidelink configured grant. It applies for both type 1 and type 2.
sl-PeriodCG This field indicates the period of sidelink configured grant in the unit of ms.
sl-PSFCH-ToPUCCH-CG-Type1 This field, for sidelink configured grant type 1, indicates slot offset between the PSFCH associated with the last PSSCH resource of each period and the PUCCH occasion used for reporting sidelink HARQ.
sl-ResourcePoolID Indicates the resource pool in which the sidelink configured grant type 1 is applied.
sl-StartRBsetCG-Type1 Indicates starting RB set index of the initial PSSCH transmission of the sidelink configured grant Type 1 for interlace RB-based PSSCH transmission.
sl-StartSubchannelCG-Type1 This field indicates the starting sub-channel of sidelink configured grant type 1. An index giving valid sub-channel index.
sl-TimeOffsetCG-Type1 This field indicates the slot offset with respect to logical slot defined by *sl-TimeReferenceSFN-Type1*, as specified in TS 38.321 [3].
sl-TimeReferenceSFN-Type1 Indicates SFN used for determination of the offset of a resource in time domain. If it is present, the UE uses the 1st logical slot of associated resource pool after the starting time of the closest SFN with the indicated number preceding the reception of the sidelink configured grant configuration type 1 as reference logical slot, see TS 38.321 [3], clause 5.8.3. If it is not present, the reference SFN is 0.
sl-TimeResourceCG-Type1 This field indicates the time resource location of sidelink configured grant type 1. An index giving valid combinations of up to two slot positions (jointly encoded) as time resource indicator value (TRIV), as defined in TS 38.212 [17].

– *SL-ConfiguredGrantConfigDedicatedSL-PRS-RP*

The IE *SL-ConfiguredGrantConfigDedicatedSL-PRS-RP* specifies the configured grant configuration information for NR sidelink positioning in a dedicated SL-PRS resource pool.

***SL-ConfiguredGrantConfigDedicatedSL-PRS-RP* field descriptions**
sl-PRS-ConfigIndexCG This field indicates the ID to identify sidelink configured grant. The field value should not be duplicated with *sl-ConfigIndexCG* in IE *SL-ConfiguredGrantConfig.*
sl-PRS-PeriodCG This field indicates the period of SL PRS configured grant in a dedicated resources in ms for either CG type 1 or CG type 2.
sl-PRS-ResourceIndicationFirstType1 Indicates SL-PRS Resource ID for the first SL-PRS transmission.
sl-PRS-ResourceIndicationFutureType1 Indicates SL-PRS resource IDs for future SL PRS transmissions. An index giving valid combinations of up to two SL PRS resource IDs (jointly encoded) .
sl-PRS-ResourcePoolID Indicates the resource pool in which the configured sidelink grant Type 1 is applied. This field value is configured with value up to 8 (*maxNrofSL-PRS-TxPool-r18*). The network always configures this field when *rrc-ConfiguredSidelinkGrantDedicatedSL-PRS-RP* contains parameters for a type 1 configured grant.
sl-TimeOffsetCG-Type1 This field indicates the slot offset with respect to logical slot defined by *sl-TimeReferenceSFN-Type1*, as specified in TS 38.321 [3].
sl-TimeReferenceSFN-Type1 Indicates SFN used for determination of the offset of a resource in time domain. If it is present, the UE uses the 1st logical slot of associated resource pool after the starting time of the closest SFN with the indicated number preceding the reception of the sidelink configured grant configuration type 1 as reference logical slot, see TS 38.321 [3], clause 5.8.3. If it is not present, the reference SFN is 0.
sl-TimeResourceCG-Type1 This field indicates the time resource location of sidelink configured grant type 1. An index giving valid combinations of up to two slot positions (jointly encoded) as time resource indicator value (TRIV), as defined in TS 38.212 [17].

– *SL-DestinationIdentity*

The IE *SL-DestinationIdentity* is used to identify a destination of a NR sidelink communication.

SL-DestinationIdentity information element

```
-- ASN1START
-- TAG-SL-DESTINATIONIDENTITY-START

SL-DestinationIdentity-r16 ::=          BIT STRING (SIZE (24))

-- TAG-SL-DESTINATIONIDENTITY-STOP
-- ASN1STOP
```

– *SL-DRX-Config*

The IE *SL-DRX-Config* is used to configure DRX related parameters for NR sidelink communication/discovery. The SL DRX timers should be calculated in the unit of physical slot.

SL-DRX-Config information element

```
-- ASN1START
-- TAG-SL-DRX-CONFIG-START

SL-DRX-Config-r17 ::=                 SEQUENCE {

***SL-DRX-ConfigGC-BC* field descriptions**
sl-DefaultDRX-GC-BC Indicates the default sidelink DRX configuration for groupcast and broadcast communications, which is used for QoS profile(s) that cannot be mapped into DRX configuration(s) configured for dedicated QoS profile(s). This field can be applied for the broadcast based or unicast based communication of Direct Link Establishment Request as described in TS 24.587 [57], ProSe Direct Link Establishment Request message and discovery message as described in TS 24.554 [72].
sl-DRX-GC-BC-PerQoS-List List of one or multiple sidelink DRX configurations for groupcast and broadcast communication, which are mapped from QoS profile(s).
sl-DRX-GC-BC-Cycle Value in ms, ms10 corresponds to 10ms, ms20 corresponds to 20 ms, ms32 corresponds to 32 ms, and so on.
sl-DRX-GC-BC-MappedQoS-FlowsList List of QoS profiles of the NR sidelink communication, which are mapped to a sidelink DRX configuration.
sl-DRX-GC-BC-OnDurationTimer Value in multiples of 1/32 ms (subMilliSeconds) or in ms (milliSecond). For the latter, value ms1 corresponds to 1 ms, value ms2 corresponds to 2 ms, and so on.
sl-DRX-GC-HARQ-RTT-Timer1, sl-DRX-GC-HARQ-RTT-Timer2 Value in number of slot lengths of the sidelink BWP where the transport block was received. Value sl0 corresponds to 0 slots, sl1 corresponds to 1 slot, sl2 corresponds to 2 slots, and so on. *sl-DRX-GC-HARQ-RTT-Timer1* is used for HARQ feedback enabled sidelink retransmission if SCI does not indicate retransmission resource(s). *sl-DRX-GC-HARQ-RTT-Timer2* is used for HARQ feedback disabled sidelink retransmission in resource pool configured with PSFCH if SCI does not indicate retransmission resource(s).
sl-DRX-GC-Generic Indicates a sidelink DRX configuration for groupcast communication, which is applicable to any QoS profile or any Destination Layer-2 ID.
sl-DRX-GC-InactivityTimer Value in multiple integers of 1 ms, ms0 corresponds to 0, ms1 corresponds to 1 ms, ms2 corresponds to 2 ms, and so on. This field is only valid for groupcast communication.
sl-DRX-GC-RetransmissionTimer Value in number of slot lengths of the sidelink BWP where the transport block was received. Value sl0 corresponds to 0 slots, sl1 corresponds to 1 slot, sl2 corresponds to 2 slots, and so on.

– *SL-DRX-ConfigUC*

The IE *SL-DRX-ConfigUC* is used to configure sidelink DRX related parameters for unicast communication.

***SL-DRX-ConfigUC* field descriptions**
sl-drx-CycleStartOffset *sl-drx-Cycle* in ms and *sl-drx-StartOffset* in multiples of 1 ms.
sl-drx-HARQ-RTT-Timer1, sl-drx-HARQ-RTT-Timer2 Value in number of slot lengths of the BWP where the transport block was received. Value sl0 corresponds to 0 slots, sl1 corresponds to 1 slot, sl2 corresponds to 2 slots, and so on. *sl-drx-HARQ-RTT-Timer1* is used for HARQ feedback enabled sidelink retransmission if SCI does not indicate retransmission resource(s). *sl-drx-HARQ-RTT-Timer2* is used for HARQ feedback disabled sidelink retransmission in resource pool configured with PSFCH if SCI does not indicate retransmission resource(s).
sl-drx-InactivityTimer Value in number of slot lengths of the BWP where the transport block was received, sl0 corresponds to 0, sl1 corresponds to 1 slot, sl2 corresponds to 2 slots, and so on.
sl-drx-onDurationTimer Value in multiples of 1/32 ms (subMilliSeconds) or in ms (milliSecond). For the latter, value ms1 corresponds to 1 ms, value ms2 corresponds to 2 ms, and so on.
sl-drx-RetransmissionTimer Value in number of slot lengths of the BWP where the transport block was received. Value sl0 corresponds to 0 slots, sl1 corresponds to 1 slot, sl2 corresponds to 2 slots, and so on.
sl-drx-SlotOffset Value in 1/32 ms. Value 0 corresponds to 0 ms, value 1 corresponds to 1/32 ms, value 2 corresponds to 2/32 ms, and so on.

– *SL-DRX-ConfigUC-SemiStatic*

The IE *SL-DRX-ConfigUC-SemiStatic* is used to indicate the semi-static sidelink DRX related parameters for unicast communication.

***SL-FreqConfig* field descriptions**
absenceOfAnyOtherTechnology Presence of this field indicates absence on a long term basis (e.g. by level of regulation) of any other technology sharing the carrier; absence of this field indicates the potential presence of any other technology sharing the carrier, as specified in TS 37.213 [48] clauses 4.5. This parameter is not expected to be provided if the sidelink carrier is overlapped with uplink carrier.
additionalSpectrumEmission Provides the *additionalSpectrumEmission* values as defined in TS 38.101-1 [15], clause 6.2E.3.1 or 6.2E.3F.1. Only one of *additionalSpectrumEmission-r16* or *additionalSpectrumEmission-v1860* is configured by network for each sidelink frequency.
sl-EnergyDetectionConfig Indicates whether to use the *maxEnergyDetectionThreshold* or the *energyDetectionThresholdOffset* (see TS 37.213 [48], clause 4.5.5).
sl-EnergyDetectionThresholdOffset Indicates the offset to the default maximum energy detection threshold value. Unit in dB. Value -13 corresponds to -13dB, value -12 corresponds to -12dB, and so on (i.e. in steps of 1dB) as specified in TS 37.213 [48], clause 4.5.5.
frequencyShift7p5khzSL Enable the NR SL transmission with a 7.5 kHz shift to the LTE raster. If the field is absent, the frequency shift is disabled.
harq-ACK-FeedbackRatioforCW-AdjustmentGC-Option2 Indicates the ratio threshold for contention window adjustment for SL groupcast option 2 as specified in TS 37.213 [48], clause 4.5.4. Unit is percentage.
sl-MaxEnergyDetectionThreshold Indicates the absolute maximum energy detection threshold value. Unit in dBm. Value -85 corresponds to -85 dBm, value -84 corresponds to -84 dBm, and so on (i.e. in steps of 1dBm) as specified in TS 37.213 [48], clause 4.5.5.
sl-AbsoluteFrequencyPointA Absolute frequency of the reference resource block (Common RB 0). Its lowest subcarrier is also known as Point A.
sl-AbsoluteFrequencySSB Indicates the frequency location of sidelink SSB. The transmission bandwidth for sidelink SSB is within the bandwidth of this sidelink BWP.
sl-BWP-ToAddModList This field indicates the list of sidelink BWP(s) on which the NR sidelink communication configuration is to be added or reconfigured. In this release, only one BWP is allowed to be configured for NR sidelink communication.
sl-BWP-ToReleaseList This field indicates the list of sidelink BWP(s) on which the NR sidelink communication configuration is to be released.
sl-Freq-Id This field indicates the identity of the dedicated configuration information on the carrier frequency for NR sidelink communication.
sl-SCS-SpecificCarrierList A set of UE specific channel bandwidth and location configurations for different subcarrier spacings (numerologies). Defined in relation to Point A. The UE uses the configuration provided in this field only for the purpose of channel bandwidth and location determination. In this release, only one *SCS-SpecificCarrier* is allowed to be configured for NR sidelink communication.
sl-SyncTxDisabled Indicates that the carrier, even though equipped with synchronisation resources, cannot be used as a synchronisation carrier frequency to transmit S-SSB.
sl-SyncPriority This field indicates synchronization priority order, as specified in clause 5.8.6. *sl-SyncPriority* is configured with the same value across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies.

ue-ToUE-COT-SharingED-Threshold Indicates the energy detection threshold that a UE uses to initiate a channel occupancy with other UE(s), and the other UE(s) that shares the initiated channel occupancy shall use this configured parameter for accessing the channel(s) as specified in TS 37.213 [48], clause 4.5.5 for sidelink channel access. Unit in dBm. Value -85 corresponds to -85 dBm, value -84 corresponds to -84 dBm, and so on (i.e. in steps of 1dBm).
valueN Indicate the NR SL transmission with a valueN *5kHz shift to the LTE raster. (see TS 38.101-1 [15], clause 5.4E.2).

Conditional Presence	Explanation
V2X-SL-Shared	This field is mandatory present if the carrier frequency configured for NR sidelink communication is shared by V2X sidelink communication. It is absent, Need R, otherwise.

– *SL-FreqConfigCommon*

The IE *SL-FreqConfigCommon* specifies the cell-specific configuration information on one particular carrier frequency for NR sidelink communication/positioning.

***SL-FreqConfigCommon* field descriptions**
absenceOfAnyOtherTechnology Presence of this field indicates absence on a long term basis (e.g. by level of regulation) of any other technology sharing the carrier; absence of this field indicates the potential presence of any other technology sharing the carrier, as specified in TS 37.213 [48] clauses 4.5.5. This parameter is not expected to be provided if the sidelink carrier is overlapped with uplink carrier.
additionalSpectrumEmission Provides the *additionalSpectrumEmission* values as defined in TS 38.101-1 [15], clause 6.2E.3.1 or 6.2E.3F.1. Only one of *additionalSpectrumEmission-r16* or *additionalSpectrumEmission-v1860* is configured by network for each sidelink frequency.
sl-EnergyDetectionConfig Indicates whether to use the *maxEnergyDetectionThreshold* or the *energyDetectionThresholdOffset* (see TS 37.213 [48], clause 4.5.5).
sl-EnergyDetectionThresholdOffset Indicates the offset to the default maximum energy detection threshold value. Unit in dB. Value -13 corresponds to -13dB, value -12 corresponds to -12dB, and so on (i.e. in steps of 1dB) as specified in TS 37.213 [48], clause 4.5.5.
frequencyShift7p5khzSL Enable the NR SL transmission with a 7.5 kHz shift to the LTE raster. If the field is absent, the frequency shift is disabled.
harq-ACK-FeedbackRatioforCW-AdjustmentGC-Option2 Indicates the ratio threshold for contention window adjustment for SL groupcast option 2 as specified in TS 37.213 [48], clause 4.5.4. Unit is percentage.
sl-MaxEnergyDetectionThreshold Indicates the absolute maximum energy detection threshold value. Unit in dBm. Value -85 corresponds to -85 dBm, value -84 corresponds to -84 dBm, and so on (i.e. in steps of 1dBm) as specified in TS 37.213 [48], clause 4.5.5.
sl-AbsoluteFrequencyPointA Absolute frequency of the reference resource block (Common RB 0). Its lowest subcarrier is also known as Point A.
sl-AbsoluteFrequencySSB Indicates the frequency location of sidelink SSB. The transmission bandwidth for sidelink SSB is within the bandwidth of this sidelink BWP.
sl-BWP-List This field indicates the list of sidelink BWP(s) on which the NR sidelink communication configuration. In this release, only one BWP is allowed to be configured for NR sidelink communication.
sl-NbAsSync This field indicates whether the network can be selected as synchronization reference directly/indirectly only, if *sl-SyncPriority* is set to gnss. If this field is set to TRUE, the network is enabled to be selected as synchronization reference directly/indirectly. The field is only present in *SidelinkPreconfigNR*. Otherwise it is absent. All values in *sl-NbAsSync* are same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies.
sl-PosBWP-List This field indicates the list of sidelink BWP(s) for NR sidelink positioning configuration. Only one BWP is allowed to be configured for NR sidelink positioning.
sl-SyncTxDisabled Indicates that the carrier, even though equipped with synchronisation resources, cannot be used as a synchronisation carrier frequency to transmit S-SSB.
sl-SyncPriority This field indicates synchronization priority order, as specified in clause 5.8.6. All values in sl-SyncPriority are same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies.
sl-SyncConfigList This field indicates the configuration by which the UE is allowed to receive and transmit synchronisation information for NR sidelink communication. Network configures *sl-SyncConfig* including *txParameters* when configuring UEs to transmit synchronisation information. If this field is configured in *SL-PreconfigurationNR-r16*, only one entry is configured in *sl-SyncConfigList*.

ue-ToUE-COT-SharingED-Threshold Indicates the energy detection threshold that a UE uses to initiate a channel occupancy with to other UE(s), and the other UE(s) that shares the initiated channel occupancy shall use this configured parameter for accessing the channel(s) as specified in TS 37.213 [48], clause 4.5.5 for sidelink channel access. Unit in dBm. Value -85 corresponds to -85 dBm, value -84 corresponds to -84 dBm, and so on (i.e. in steps of 1dBm).
valueN Indicate the NR SL transmission with a valueN *5kHz shift to the LTE raster (see TS 38.101-1 [15], clause 5.4E.2).

Conditional Presence	Explanation
SIB12	This field is optional present if included within *SIB12*, need R. Otherwise, the field is absent.
SIB23	This field is optional present if included within *SIB23*, need R. Otherwise, the field is absent.
V2X-SL-Shared	This field is mandatory present if the carrier frequency configured for NR sidelink communication is shared by V2X sidelink communication. It is absent, Need R, otherwise.

– *SL-FreqSelectionConfig*

The IE *SL-FreqSelectionConfig* specifies the configuration information for carrier selection for NR sidelink transmission using UE autonomous resource selection.

SL-FreqSelectionConfig **information element**

```
-- ASN1START
-- TAG-SL-FREQSELECTIONCONFIG-START

SL-FreqSelectionConfig-r18 ::=   SEQUENCE {
    sl-priorityList-r18            SEQUENCE (SIZE (1..8)) OF INTEGER (1..8),
    sl-threshCBR-FreqReselection-r18 SL-CBR-r16,
    sl-threshCBR-FreqKeeping-r18    SL-CBR-r16
}

-- TAG-SL-FREQSELECTIONCONFIG-STOP
-- ASN1STOP
```

SL-FreqSelectionConfig **field descriptions**
sl-priorityList Indicates the list of sidelink logical channel priority which is associated with the configurations in *sl-threshCBR-FreqReselection* and in *sl-threshCBR-FreqKeeping*.
sl-threshCBR-FreqReselection Indicates the CBR threshold based on which UE determines whether the carrier frequency can be (re)selected for the transmission of NR sidelink. See TS 38.321 [3].
sl-threshCBR-FreqKeeping Indicates the CBR threshold based on which UE determines whether the UE can keep using the carrier which was selected for the transmission of NR sidelink. See TS 38.321 [3].

– *SL-IndirectPathAddChange*

The IE *SL-IndirectPathAddChange* specifies the configuration information of SL indirect path for SL indirect path addition/change in MP.

SL-IndirectPathAddChange information element

```
-- ASN1START
-- TAG-SL-INDIRECTPATHADDCHANGE-START

SL-IndirectPathAddChange-r18 ::=         SEQUENCE {
    sl-IndirectPathRelayUE-Identity-r18      SL-SourceIdentity-r17,
    sl-IndirectPathCellIdentity-r18         CellIdentity,
    t421-r18                               ENUMERATED {ms50, ms100, ms150, ms200, ms500, ms1000, ms2000, ms10000} OPTIONAL, -- Need M

    ...
}

-- TAG-SL-INDIRECTPATHADDCHANGE-STOP
-- ASN1STOP
```

SL-IndirectPathAddChange field descriptions
sl-IndirectPathRelayUEIdentity Indicates the L2 source ID of the L2 U2N Relay UE of SL indirect path.
sl-IndirectPathCellIdentity Identifies the serving cell of the indicated L2 U2N Relay UE.
t421 Indicates the timer value of T421 to be used during indirect path addition or change.

– *SL-InterUE-CoordinationConfig*

The IE *SL-InterUE-CoordinationConfig* is used to configure the sidelink inter-UE coordination (between a UE, UE-A, and a peer UE, UE-B) parameters. The network ensures sidelink inter-UE coordination and sidelink DRX are not configured at the same time for a UE.

SL-InterUE-CoordinationConfig information element

```
-- ASN1START
-- TAG-SL-INTERUE-COORDINATIONCONFIG-START

SL-InterUE-CoordinationConfig-r17 ::=    SEQUENCE {

-- ASN1STOP
```

***SL-InterUE-CoordinationScheme1* field descriptions**
sl-Condition1-A-2 Indicates disabling the use of condition of excluding from preferred resource set resource(s) in slot(s) where UE-A, when it is intended receiver of UE-B, does not expect to perform SL reception from UE-B due to half duplex operation.
sl-ContainerCoordInfo Indicates whether a SCI format 2-C can be used as the container of inter-UE coordination information transmission from UE-A to UE-B in Scheme 1 in addition to using MAC CE.
sl-ContainerRequest Indicates whether a SCI format 2-C can be used as the container of an explicit request for inter-UE coordination information transmission from UE-B to UE-A in Scheme 1 in addition to using MAC CE.
sl-DetermineResourceType Indicates how to determine the resource set type to be provided by inter-UE coordination information transmission. Value "*uea*" means the resource set type is determined by UE-A's implementation. Value "*ueb*" means the resource set type is determined by UE-B's request.
sl-IUC-Condition Indicates whether inter-UE coordination information triggered by a condition is enabled or not other than explicit request reception.
sl-IUC-Explicit Indicates whether inter-UE coordination information triggered by an explicit request is enabled or not.
sl-MaxSlotOffsetTRIV Indicates the maximum value of logical slot offset with respect to a reference slot that is used for representing the first resource location of each TRIV to indicate the set of resources in Scheme 1 as specified in TS 38.214 [19].
sl-NumSubCH-PreferredResousrceSet Indicates the number of sub-channels used for determining the preferred resource set in Scheme 1 when the inter-UE coordination information transmission is triggered by a condition other than explicit request reception.
sl-PriorityCoordInfoCondition Parameter used to determine the priority values for the purpose defined in TS 38.213 [13] and TS 38.214 [19] including, the priority value for sensing and candidate resource (re-)selection for transmitting the TB carrying the IUC MAC CE and the priority value in the SCI Format 1-A corresponding to the TB carrying the IUC MAC CE, triggered by a condition other than explicit request reception in Scheme 1. The priority value of IUC MAC CE used in LCP procedure (see TS 38.321 [3]) is fixed as "1".
sl-PriorityCoordInfoExplicit Parameter used to determine the priority values for the purpose defined in TS 38.213 [13] and TS 38.214 [19] including, the priority value for sensing and candidate resource (re-)selection for transmitting the TB carrying the IUC MAC CE and the priority value in the SCI Format 1-A corresponding to the TB carrying the IUC MAC CE, triggered by an explicit request in Scheme 1. The priority value of IUC MAC CE used in LCP procedure (see TS 38.321 [3]) is fixed as "1".
sl-PriorityPreferredResourceSet Indicates the priority value used for determining the preferred resource set in Scheme 1 when the inter-UE coordination information transmission is triggered by a condition other than explicit request reception.
sl-PriorityRequest Parameter used to determine the priority values for the purpose defined in TS 38.213 [13] and TS 38.214 [19] including, the priority value for sensing and candidate resource (re-)selection for transmitting the TB carrying the IUC request MAC CE and the priority value in the SCI Format 1-A corresponding to the TB carrying the IUC request MAC CE, in an explicit request for inter-UE coordination information in Scheme 1. The priority value of IUC request MAC CE used in LCP procedure (see TS 38.321 [3]) is fixed as "1".
sl-ReservedPeriodPreferredResourceSet Indicates the resource reservation interval used for determining the preferred resource set in Scheme 1 when the inter-UE coordination information transmission is triggered by a condition, by means of an index to the corresponding entry of *sl-ResourceReservePeriodList-r16*.

sl-TriggerConditionCoordInfo Indicates the additional alternative trigger condition of inter-UE coordination information triggered by a condition rather than request reception for data transmission in Scheme-1 from UE-A to UE-B. This field is also used to indicate the additional alternative trigger condition of inter-UE coordination information triggered by a condition rather than request reception for SL-PRS transmission in a shared SL PRS resource pool in Scheme-1 from UE-A to UE-B. Value 0 means inter-UE coordination information is triggered by UE-A's implementation. Value 1 means inter-UE coordination information can be triggered only when UE-A has data to be transmitted together with the inter-UE coordination information to UE-B.
sl-TriggerConditionRequest Indicates the trigger condition of an explicit request from UE-B to UE-A for data transmission. This field is also used to indicate the trigger condition of an explicit request from UE-B to UE-A for SL-PRS transmission in a shared SL PRS resource pool. Value 0 means the explicit request is triggered by UE-B's implementation. Value 1 means the explicit request can be triggered only when UE-B has data or SL-PRS to be transmitted to UE-A.
sl-ThresholdRSRP-Condition1-B-1-Option1List Indicates the RSRP threshold used to determine reserved resource(s) of other UE(s) whose RSRP measurement is larger than it as the set of resource(s) non-preferred for UE-B's transmission for Condition 1-B-1 of Scheme 1, as specified in TS 38.214 [19]. Value 0 corresponds to minus infinity dBm, value 1 corresponds to -128dBm, value 2 corresponds to -126dBm, value n corresponds to (-128 + (n-1)*2) dBm and so on, value 66 corresponds to infinity dBm.
sl-ThresholdRSRP-Condition1-B-1-Option2List Indicates the RSRP threshold used to determine reserved resource(s) of other UE(s) whose RSRP measurement is smaller than it as the set of resource(s) non-preferred for UE-B's transmission for Condition 1-B-1 of Scheme 1, as specified in TS 38.214 [19]. Value 0 corresponds to minus infinity dBm, value 1 corresponds to -128dBm, value 2 corresponds to -126dBm, value n corresponds to (-128 + (n-1)*2) dBm and so on, value 66 corresponds to infinity dBm.

***SL-InterUE-CoordinationScheme2* field descriptions**
sl-DeltaRSRP-Thresh Indicates the RSRP threshold delta value corresponding to *deltaRSRPThresh* specified in clause 16.3.0 of TS 38.213 [13] and used to determine reserved resource(s) of other UE(s). Value in dB. Only even values (step size 2) allowed.
sl-IndicationUE-B Indicates whether to enable or disable the usage of 1 LSB of reserved bits of a SCI format 1-A to indicate of whether UE scheduling a conflict TB can be UE-B or not.
sl-IUC-Scheme2 Indicates whether inter-UE coordination Scheme 2 is enabled or not.
sl-OptionForCondition2-A-1 Indicates the RSRP threshold used to consider additional criteria for condition 2-A-1. Value 0 corresponds to using the RSRP threshold according to the priorities included in the SCI, UE uses thresholds *sl-Thres-RSRP-List*, in its resource pool configuration *sl-UE-SelectedConfigRP*, corresponding to *ThresPSSCH-RSRP-List* specified in clause 16.3.0 of TS 38.213 [13]. Value 1 corresponds to using a (pre)configured RSRP threshold delta value *sl-DeltaRSRP-Thresh,* corresponding to *deltaRSRPThresh* specified in clause 16.3.0 of TS 38.213 [13].
sl-PSFCH-Occasion Indicates the reference slot from which a PSFCH occasion for inter-UE coordination information transmission is derived. Value 0 corresponds to the slot where UE-B's SCI is transmitted and value 1 corresponds to the slot where expected/potential resource conflict occurs on PSSCH resource indicated by UE-B's SCI.
sl-RB-SetPSFCH Indicates the set of PRBs that are actually used for inter-UE coordination information transmission and reception in Scheme 2. The leftmost bit of the bitmap refers to the lowest RB index in the resource pool, and so on.
sl-SlotLevelResourceExclusion Indicates that physical layer of UE-B reports resources in a slot including the next reserved resource indicated by the corresponding UE-B's SCI to higher layer.
sl-TypeUE-A Indicates that a non-destination UE of a TB transmitted by UE-B can be UE-A which sends inter-UE coordination information to UE-B, when UE-A is a destination UE of another TB conflicting with the TB transmitted by UE-B.

– *SL-LBT-FailureRecoveryConfig*

The IE *SL-LBT-FailureRecoveryConfig-r18* is used to configure the parameters used for detection and cancellation of Sidelink consistent LBT failures for operation with shared spectrum channel access, as specified in TS 38.321 [3].

SL-LBT-FailureRecoveryConfig information element

```
-- ASN1START
-- TAG-SL-LBT-FAILURERECOVERYCONFIG-START

SL-LBT-FailureRecoveryConfig-r18 ::=    SEQUENCE {
    sl-LBT-FailureInstanceMaxCount-r18     ENUMERATED {n4, n8, n16, n32, n64, n128, spare2, spare1}           OPTIONAL,   -- Need M
    sl-LBT-FailureDetectionTimer-r18       ENUMERATED {ms10, ms20, ms40, ms80, ms160, ms320, spare2, spare1}    OPTIONAL,   -- Need M
    sl-LBT-RecoveryTimer-r18             ENUMERATED {ms10, ms20, ms40, ms80, ms160, ms320, spare2, spare1}    OPTIONAL,   -- Need M
    ...
}

-- TAG-SL-LBT-FAILURERECOVERYCONFIG-STOP
-- ASN1STOP
```

SL-LBT-FailureRecoveryConfig field descriptions
sl-LBT-FailureDetectionTimer Timer for consistent sidelink LBT failure detection (see TS 38.321 [3]). Value ms10 corresponds to 10 ms, value ms20 corresponds to 20 ms, and so on.
sl-LBT-FailureInstanceMaxCount This field determines after how many LBT failure indications received from the physical layer the UE triggers sidelink LBT failure recovery (see TS 38.321 [3]). Value n4 corresponds to 4, value n8 corresponds to 8, and so on.
sl-LBT-RecoveryTimer Timer for consistent sidelink LBT failure cancellation (see TS 38.321 [3]). Value ms10 corresponds to 10 ms, value ms20 corresponds to 20 ms, and so on.

– *SL-LogicalChannelConfig*

The IE *SL-LogicalChannelConfig* is used to configure the sidelink logical channel parameters.

SL-LogicalChannelConfig information element

```
-- ASN1START
-- TAG-SL-LOGICALCHANNELCONFIG-START

}
-- TAG-SL-LOGICALCHANNELCONFIG-STOP
-- ASN1STOP
```

***SL-LogicalChannelConfig field* descriptions**
sl-AllowedCarriers If present, SL MAC SDUs from this logical channel can only be mapped to the sidelink carriers indicated in this list. Otherwise, SL MAC SDUs from this logical channel can be mapped to any configured sidelink carriers. The value 1 corresponds to the frequency of first entry in *sl-FreqInfoList* broadcast in *SIB12*, the value 2 corresponds to the frequency of first entry in *sl-FreqInfoListSizeExt* broadcast in *SIB12*, the value 3 corresponds to the frequency of second entry in *sl-FreqInfoListSizeExt* broadcast in *SIB12* and so on.
sl-AllowedCG-List This restriction applies only when the SL grant is a configured grant. If present, SL MAC SDUs from this logical channel can only be mapped to the indicated configured grant configuration. If the size of the sequence is zero, then SL MAC SDUs from this logical channel cannot be mapped to any configured grant configurations. If the field is not present, SL MAC SDUs from this logical channel can be mapped to any configured grant configurations. If the field *sl-ConfiguredGrantType1Allowed* is present, only those sidelink configured grant type 1 configurations indicated in this sequence are allowed for use by this sidelink logical channel; otherwise, this sequence shall not include any sidelink configured grant type 1 configuration. Corresponds to "sl-AllowedCG-List" as specified in TS 38.321 [3].
sl-AllowedSCS-List If present, it indicates the numerology of UL-SCH resources that this sidelink logical channel is mapped to, when checking the SR trigger condition. Corresponds to ' sl-AllowedSCS-List' in TS 38.321 [3].
sl-BucketSizeDuration Value in ms. *ms5* corresponds to 5 ms, value *ms10* corresponds to 10 ms, and so on.
sl-ChannelAccessPriority Indicates the Channel Access Priority Class (CAPC), as specified in TS 38.300 [2], to be used on sidelink transmissions for operation with shared spectrum channel access in FR1. The network configures this field only for DRBs.
sl-ConfiguredGrantType1Allowed If present and set to true, or if the capability *lcp-RestrictionSidelink* as specified in TS 38.306 [26] is not indicated, SL MAC SDUs from this sidelink logical channel can be transmitted on a sidelink configured grant type 1. Otherwise, SL MAC SDUs from this logical channel cannot be transmitted on a sidelink configured grant type 1. Corresponds to 'sl-configuredGrantType1Allowed' in TS 38.321 [3].
sl-HARQ-FeedbackEnabled Network always includes this field. It indicates the HARQ feedback enabled/disabled restriction in LCP for this sidelink logical channel. If set to *enabled*, the sidelink logical channel will be multiplexed only with a logical channel which enabling the HARQ feedback. If set to *disabled*, the sidelink logical channel cannot be multiplexed with a logical channel which enabling the HARQ feedback. Corresponds to 'sl-HARQ-FeedbackEnabled' in TS 38.321 [3]. If this field of at least one sidelink logical channel for the UE is set to enabled, *sl-PSFCH-Config* should be mandatory present in configuration *SL-ResourcePool* of at least one of the sidelink resource pools.
sl-LogicalChannelGroup ID of the sidelink logical channel group, as specified in TS 38.321 [3], which the sidelink logical channel belongs to.
sl-LogicalChannelSR-DelayTimerApplied Indicates whether to apply the delay timer for SR transmission for this sidelink logical channel. Set to false if *logicalChannelSR-DelayTimer* is not included in *sl-BSR-Config*.
sl-MaxPUSCH-Duration If present, it indicates the maximum PUSCH duration of UL-SCH resources that this sidelink logical channel is mapped to, when checking the SR trigger condition. Corresponds to "sl-MaxPUSCH-Duration" in TS 38.321 [3].
sl-PrioritisedBitRate Value in kiloBytes/s. Value *kBps0* corresponds to 0 kiloBytes/s, value *kBps8* corresponds to 8 kiloBytes/s, value *kBps16* corresponds to 16 kiloBytes/s, and so on.
sl-Priority Sidelink logical channel priority, as specified in TS 38.321 [3].
sl-SchedulingRequestId If present, it indicates the scheduling request configuration applicable for this sidelink logical channel, as specified in TS 38.321 [3].

Conditional Presence	Explanation
CONNECTED	This field is optionally present, Need M, in an RRCReconfiguration message, for a SL DRB with additional sidelink RLC bearer being configured. The field is absent otherwise.

– *SL-L2RelayUE-Config*

The IE *SL-L2RelayUE-Config* is used to configure L2 U2N relay operation related configurations used by L2 U2N Relay UE, or L2 U2U relay operation related configurations used by L2 U2U Relay UE.

SL-L2RelayUE-Config information element

    sl-QuantityConfig-r16              SL-QuantityConfig-r16                                    OPTIONAL,   -- Need M
    ...
}

SL-MeasObjectToRemoveList-r16 ::=   SEQUENCE (SIZE (1..maxNrofSL-ObjectId-r16)) OF SL-MeasObjectId-r16

SL-ReportConfigToRemoveList-r16 ::= SEQUENCE (SIZE (1..maxNrofSL-ReportConfigId-r16)) OF SL-ReportConfigId-r16

SL-MeasIdToRemoveList-r16 ::=      SEQUENCE (SIZE (1..maxNrofSL-MeasId-r16)) OF SL-MeasId-r16

-- TAG-SL-MEASCONFIGINFO-STOP
-- ASN1STOP
```

***SL-MeasConfigInfo* field descriptions**
sl-MeasIdToAddModList List of sidelink measurement identities to add and/or modify.
sl-MeasIdToRemoveList List of sidelink measurement identities to remove.
sl-MeasObjectToAddModList List of sidelink measurement objects to add and/or modify.
sl-MeasObjectToRemoveList List of sidelink measurement objects to remove.
sl-QuantityConfig Indicates the layer 3 filtering coefficient for sidelink measurement.
sl-ReportConfigToAddModList List of sidelink measurement reporting configurations to add and/or modify.
sl-ReportConfigToRemoveList List of sidelink measurement reporting configurations to remove.

– *SL-MeasIdList*

The IE *SL-MeasIdList* concerns a list of SL measurement identities to add or modify for a destination, with for each entry the *sl-MeasId*, the associated *sl-MeasObjectId* and the associated *sl-ReportConfigId*.

SL-MeasIdList information element

```
-- ASN1START
-- TAG-SL-MEASIDLIST-START

SL-MeasIdList-r16 ::=            SEQUENCE (SIZE (1..maxNrofSL-MeasId-r16)) OF SL-MeasIdInfo-r16
```

```
SL-MeasIdInfo-r16 ::=             SEQUENCE {
    sl-MeasId-r16                   SL-MeasId-r16,
    sl-MeasObjectId-r16              SL-MeasObjectId-r16,
    sl-ReportConfigId-r16            SL-ReportConfigId-r16,
    ...
}

SL-MeasId-r16 ::=               INTEGER (1..maxNrofSL-MeasId-r16)

-- TAG-SL-MEASIDLIST-STOP
-- ASN1STOP
```

– *SL-MeasObjectList*

The IE *SL-MeasObjectList* concerns a list of SL measurement objects to add or modify for a destination.

SL-MeasObjectList information element

```
-- ASN1START
-- TAG-SL-MEASOBJECTLIST-START

SL-MeasObjectList-r16 ::=            SEQUENCE (SIZE (1..maxNrofSL-ObjectId-r16)) OF SL-MeasObjectInfo-r16

SL-MeasObjectInfo-r16 ::=            SEQUENCE {
    sl-MeasObjectId-r16                SL-MeasObjectId-r16,
    sl-MeasObject-r16                  SL-MeasObject-r16,
    ...
}

SL-MeasObjectId-r16 ::=              INTEGER (1..maxNrofSL-ObjectId-r16)

SL-MeasObject-r16 ::=                SEQUENCE {
    frequencyInfoSL-r16                ARFCN-ValueNR,
    ...
}

-- TAG-SL-MEASOBJECTLIST-STOP
-- ASN1STOP
```

***SL-MeasObjectList* field descriptions**
frequencyInfoSL It indicates the lowest usable subcarrier on the carrier where SL RSRP is measured, determined according to *sl-AbsoluteFrequencyPointA* in IE *SL-FreqConfig/SL-FreqConfigCommon* and *offsetToCarrier* in IE *SCS-SpecificCarrier* configured for *sl-SCS-SpecificCarrierList* in IE *SL-FreqConfig/SL-FreqConfigCommon*. See TS 38.211 [16], clause 8.2.5.
sl-MeasObjectId It is used to identify a sidelink measurement object configuration.
sl-MeasObject It specifies information applicable for sidelink DMRS, SL-PRS measurement.

– *SL-PagingIdentityRemoteUE*

The IE *SL-PagingIdentityRemoteUE* includes the Remote UE's paging UE ID.

SL-PagingIdentityRemoteUE information element

```
-- ASN1START
-- TAG-SL-PAGINGIDENTITYREMOTEUE-START

SL-PagingIdentityRemoteUE-r17 ::=  SEQUENCE {
    ng-5G-S-TMSI-r17                NG-5G-S-TMSI,
    fullI-RNTI-r17                  I-RNTI-Value                  OPTIONAL   -- Need R
}

-- TAG-SL-PAGINGIDENTITYREMOTEUE-STOP
-- ASN1STOP
```

– *SL-PBPS-CPS-Config*

The IE *SL-PBPS-CPS-Config* specifies the operation information for a resource pool which can be (pre-)configured to enable full sensing only, partial sensing only, random resource selection only, or any combination(s) thereof.

SL-PBPS-CPS-Config information element

```
-- ASN1START
-- TAG-SL-PBPS-CPS-CONFIG-START

SL-PBPS-CPS-Config-r17 ::=              SEQUENCE {
sl-AllowedResourceSelectionConfig-r17     ENUMERATED {c1, c2, c3, c4, c5, c6, c7}                   OPTIONAL,   -- Need M
sl-MinNumCandidateSlotsPeriodic-r17       INTEGER (1..32)                                         OPTIONAL,   -- Need M
sl-PBPS-OccasionReservePeriodList-r17     SEQUENCE (SIZE (1..16)) OF INTEGER (1..16)                OPTIONAL,   -- Need M
sl-Additional-PBPS-Occasion-r17           ENUMERATED { monitored }                                  OPTIONAL,   -- Need M
sl-CPS-WindowPeriodic-r17                 INTEGER (5..30)                                         OPTIONAL,   -- Need M
sl-MinNumCandidateSlotsAperiodic-r17      INTEGER (1..32)                                         OPTIONAL,   -- Need M
```

```
sl-MinNumRssiMeasurementSlots-r17       INTEGER (1..800)                                    OPTIONAL,   -- Need M
sl-DefaultCBR-RandomSelection-r17       INTEGER (0..100)                                    OPTIONAL,   -- Need M
sl-DefaultCBR-PartialSensing-r17        INTEGER (0..100)                                    OPTIONAL,   -- Need M
sl-CPS-WindowAperiodic-r17             INTEGER (0..30)                                    OPTIONAL,   -- Need M
sl-PartialSensingInactiveTime-r17       ENUMERATED { enabled, disabled }                       OPTIONAL,   -- Need M
    ...
}

-- TAG-SL-PBPS-CPS-CONFIG-STOP
-- ASN1STOP
```

***SL-PBPS-CPS-Config* field descriptions**
sl-Additional-PBPS-Occasion Indicates that UE additionally monitors periodic sensing occasions that correspond to a set of values. (see TS 38.214 [19], clause 8.1.4).
sl-AllowedResourceSelectionConfig Indicates the allowed resource selection mechanism(s), i.e. full sensing only, partial sensing only, random resource selection only, or any combination(s) thereof. (see TS 38.214 [19], clause 8.1.4). Only *c1*, *c4*, *c5* or *c7* can be configured for a Rel-16 resource pool. Only *c1* can be configured for a resource pool included in *sl-TxPoolSelectedNormal*, for which *sl-NRPSFCH-EUTRA-ThresRSRP-List*/*sl-NRPSSCH-EUTRA-ThresRSRP-List* is configured. If this field is not configured for a resource pool included in *sl-TxPoolSelectedNormal*, only full sensing is allowed in the corresponding resource pool. *c1*: only full sensing allowed *c2*: only partial sensing allowed *c3*: only random selection allowed *c4*: full sensing+random selection allowed *c5*: full sensing+ partial sensing allowed *c6*: partial sensing + random selection allowed *c7*: full sensing+ partial sensing + random selection allowed.
sl-CPS-WindowAperiodic Parameter that indicates the minimum size of contiguous partial sensing window in logical slot units for a resource (re)selection procedure and re-evaluation/pre-emption checking triggered by aperiodic transmission. (see TS 38.214 [19], clause 8.1.4). If not configured, the size of contiguous partial sensing window in logical slot units is 31.
sl-CPS-WindowPeriodic Indicates the size of contiguous partial sensing window in logical slot units when UE performs periodic-based and contiguous partial sensing for a resource (re)selection procedure triggered by periodic transmission. If not configured, the size of contiguous partial sensing window in logical slot units is 31.
sl-DefaultCBR-PartialSensing Indicates default value of SL CBR measurement for a UE that is configured to perform partial sensing by its higher layer (including when SL DRX is configured) if the number of SL RSSI measurement slots over CBR measurement window is below *sl-MinNumRssiMeasurementSlots*, (see TS 38.214 [19], clause 8.1.6). Value 0 corresponds to 0, value 1 to 0.01, value 2 to 0.02, and so on.
sl-DefaultCBR-RandomSelection Indicates default value of CBR measurement for a UE that performs random resource selection if no SL CBR measurement result over SL CBR measurement window, (see TS 38.214 [19], clause 8.1.6). Value 0 corresponds to 0, value 1 to 0.01, value 2 to 0.02, and so on.
sl-MinNumCandidateSlotsAperiodic Indicates the minimum number of Y' slots that are included in the possible candidate resources corresponding to periodic-based partial sensing and/or contiguous partial sensing for resource (re)selection triggered by aperiodic transmission. (see TS 38.214 [19], clause 8.1.4).
sl-MinNumCandidateSlotsPeriodic Indicates the minimum number of Y slots that are included in the possible candidate resources corresponding to periodic-based partial sensing for resource (re)selection triggered by periodic transmission. (see TS 38.214 [19], clause 8.1.4).
sl-MinNumRssiMeasurementSlots Indicates a threshold for a minimum number of SL RSSI measurement slots over CBR measurement window for which the SL RSSI is measured for a UE that is configured to perform partial sensing by its higher layer (including when SL DRX is configured). (see TS 38.214 [19], clause 8.1.6).
sl-PartialSensingInactiveTime Indicates whether or not UE is required to perform SL reception of PSCCH and RSRP measurement for partial sensing on slots in SL DRX inactive time when partial sensing is configured by its higher layer. (see TS 38.214 [19], clause 8.1.4).

sl-PBPS-OccasionReservePeriodList
Indicates the subset of periodicity values from *sl-ResourceReservePeriodList* used to determine periodic sensing occasions in periodic-based partial sensing, by means of an index to the corresponding entry in *sl-ResourceReservePeriodList-r16*. If not configured, all periodicity values from *sl-ResourceReservePeriodList* are used to determine periodic sensing occasions in periodic-based partial sensing (see TS 38.214 [19], clause 8.1.4).

– *SL-PDCP-Config*

The IE *SL-PDCP-Config* is used to set the configurable PDCP parameters for a sidelink radio bearer.

***SL-PDCP-Config* information element**

```
-- ASN1START

***SL-PDCP-Config* field descriptions**
sl-DiscardTimer Value in ms of *discardTimer* specified in TS 38.323 [5]. Value *ms50* corresponds to 50 ms, value *ms100* corresponds to 100 ms and so on.
sl-OutOfOrderDelivery Indicates whether or not outOfOrderDelivery specified in TS 38.323 [5] is configured. This field should be either always present or always absent, after the radio bearer is established.
sl-PDCP-SN-Size PDCP sequence number size for unicast NR sidelink communication, 12 or 18 bits, as specified in TS 38.323 [5]. For groupcast and broadcast NR sidelink communication, only 12 bits is applicable, as specified in 9.1.1.5.

Conditional Presence	Explanation
Setup	The field is mandatory present in case of sidelink DRB setup via dedicated signaling and in case of sidelink DRB configuration via system information and pre-configuration; otherwise the field is optionally present, need M.
Setup2	The field is mandatory present in case of sidelink DRB setup via dedicated signaling and in case of sidelink DRB configuration via system information and pre-configuration for RLC-AM and RLC-UM for unicast NR sidelink communication; otherwise the field is not present, Need M.

- *SL-PosBWP-ConfigCommon*

The IE *SL-PosBWP-ConfigCommon* is used to configure the cell-specific configuration for sidelink positioning on one particular sidelink bandwidth part.

SL-PosBWP-ConfigCommon information element

SL-PosBWP-ConfigCommon field descriptions
sl-BWP-Generic This field indicates the generic parameters on the configured sidelink BWP.
sl-BWP-PRS-PoolConfigCommon This field indicates the dedicated SL-PRS resource pool configurations for SL-PRS on the configured sidelink BWP. Dedicated SL-PRS resource pool is not expected to be configured in the slots colliding with the slots (pre)configured for any other resource pool(s) or S-SSB resource(s) in other SL carriers.

– *SL-PRS-ResourcePool*

The IE *SL-PRS-ResourcePool* specifies the configuration information for NR sidelink PRS dedicated resource pool.

-- TAG-SL-PRS-RESOURCEPOOL-STOP
-- ASN1STOP
```

***SL-PRS-ResourcePool* field descriptions**
sl-CBR-ConfigIndexDedicatedSL-PRS-RP Indicates the CBR ranges to be used by an index to the entry of the CBR range configuration in *sl-CBR-RangeDedicatedSL-PRS-RP-List*.
sl-CBR-PriorityTxConfigDedicatedSL-PRS-RP-List Indicates the mapping between SL-PRS transmission parameter (such as transmission power, etc.) sets by using the indexes of the configurations in *sl-CBR-SL-PRS-TxConfigList*, CBR ranges by using the indexes to the entry of the CBR range configurations in *sl-CBR-RangeDedicatedSL-PRS-RP-List*, and priority ranges. It also indicates the default SL-PRS transmission parameters to be used when CBR measurement results are not available.
sl-DefaultTxConfigIndexDedicatedSL-PRS-RP Indicates the SL PRS transmission parameters to be used by the UEs which do not have available CBR measurement results, by means of an index to the corresponding entry in *sl-PRS-TxConfigIndexList*. Value 0 indicates the first entry in *sl-PRS-TxConfigIndexList*. The field is ignored if the UE has available CBR measurement results.
sl-FilterCoefficient This field indicates the filtering coefficient for long-term measurement and reference signal power derivation used for sidelink open-loop power control.
sl-MaxNumPerReserveDedicatedSL-PRS-RP Indicates the maximum number of SL PRS reservations that can be indicated by an SCI.
sl-NumReservedBitsSCI1B-DedicatedSL-PRS-RP Indicates the number of reserved bits in SCI format 1-B.
sl-NumSubchannelDedicatedSL-PRS-RP Indicates the number of subchannels in the corresponding resource pool, which consists of contiguous PRBs only.
sl-PosAllowedResourceSelectionConfig Indicates allowed resource allocation method configured per resource pool.

c1: only sensing allowed c2: only random resource selection allowed c3: sensing and random resource selection allowed
sl-PreemptionEnableDedicatedSL-PRS-RP Indicates whether pre-emption is disabled or enabled in a resource pool. If the field is present and the value is *pl1*, *pl2*, and so on (but not *enabled*), it means that pre-emption is enabled and a priority level p_preemption is configured. If the field is present and the value is *enabled*, the pre-emption is enabled (but p_preemption is not configured) and pre-emption is applicable to all levels.
sl-PriorityThreshold Indicates the threshold used to determine whether NR sidelink transmission in dedicated SL PRS resource pool is prioritized over uplink transmission of priority index 0 as specified in TS 38.213[13], clause 16.2.4.3, or whether PUCCH transmission carrying SL HARQ is prioritized over PUCCH transmission carrying UCI of priority index 0 if they overlap in time as specified in TS 38.213 [13], clause 9.2.5.0.
sl-PriorityThresholdDedicatedSL-PRS-RP Indicates the upper bound of priority range which is associated with the configurations in *sl-CBR-ConfigIndexDedicatedSL-PRS-RP* and in *sl-PRS-TxConfigIndexList*. The upper bounds of the priority ranges are configured in ascending order for consecutive entries of *SL-PriorityTxConfigIndexDedicatedSL-PRS-RP* in *sl-CBR-PriorityTxConfigDedicatedSL-PRS-RP-List*. For the first entry of *sl-PriorityThreshold-DedicatedSL-PRS-RP*, the lower bound of the priority range is 1.
sl-PriorityThreshold-UL-URLLC Indicates the threshold used to determine whether NR sidelink transmission in dedicated SL PRS resource pool is prioritized over uplink transmission of priority index 1 as specified in TS 38.213[13], clause 16.2.4.3, or whether PUCCH transmission carrying SL HARQ is prioritized over PUCCH transmission carrying UCI of priority index 1 if they overlap in time as specified in TS 38.213 [13], clause 9.2.5.0.
sl-PRS-ResourceReservePeriodList Indicates set of possible resource reservation period in the unit of ms allowed in the resource pool. Up to 16 values can be configured per resource pool. The value *ms0* is always configured.
sl-PRS-ResourcesDedicatedSL-PRS-RP Indicates SL PRS resources in a slot of dedicated SL PRS resource pool as defined in TS 38.211 [16].
sl-PRS-TxConfigIndexList Indicates list of *SL-PRS-Tx-ConfigIndex* indicating the SL PRS transmission configuration index.
sl-RB-Number Indicates the number of PRBs in the corresponding SL PRS dedicated resource pool, which consists of contiguous PRBs only.
sl-SCI-basedSL-PRS-TxTriggerSCI1-B Indicates presence of a bit-field in SCI format 1-B to trigger SL-PRS transmission by a receiving UE.
sl-SelectionWindowListDedicatedSL-PRS-RP Parameter that determines the end of the selection window in the resource selection for a SL-PRS with respect to priority indicated in SCI. Value n1 corresponds to $1*2^{\mu}$, value n5 corresponds to $5*2^{\mu}$, and so on, where μ = 0,1,2,3 refers to SCS 15,30,60,120 kHz respectively.
sl-SensingWindowDedicatedSL-PRS-RP Indicates the start of the sensing window for SL PRS in a dedicated resource pool.
sl-SRC-ID-LenDedicatedSL-PRS-RP Indicates the number of bits used for the source ID in SCI format 1-B.
sl-StartRB-SubchannelDedicatedSL-PRS-RP Indicates the lowest RB index of the SL PRS dedicated resource pool with respect to the lowest RB index of a SL BWP.
sl-SubchannelSizeDedicatedSL-PRS-RP Indicates size of a subchannel for PSCCH in number of RBs.
sl-Thres-RSRP-ListDedicatedSL-PRS-RP Indicates a list of 64 thresholds, the threshold should be selected based on the priority in the decoded SCI and the priority in the SCI to be transmitted.

sl-ThreshS-RSSI-PRS-CBR Indicates the S-RSSI threshold for determining the contribution of a sub-channel to the SL-PRS CBR measurement in a dedicated SL-PRS resource pool. Value 0 corresponds to -112 dBm, value 1 to -110 dBm, value n to (-112 + n*2) dBm, and so on.
sl-TimeResource This field indicates the bitmap of the SL PRS dedicated resource pool, which is defined by repeating the bitmap with a periodicity during a SFN or DFN cycle.
sl-TimeWindowSizeCBR-DedicatedSL-PRS-RP Indicates the time window size for CBR measurement in a dedicated SL-PRS resource pool.
sl-TimeWindowSizeCR-DedicatedSL-PRS-RP Indicates the time window size for CR evaluation in a dedicated SL-PRS resource pool.
sl-TxPercentageDedicatedSL-PRS-RP-List Indicates list of minimum Tx percentage (list per priority).

SL-PSCCH-ConfigDedicatedSL-PRS-RP **field descriptions**
sl-DMRS-ScrambleID-DedicatedSL-PRS-RP Indicates the initialization value for PSCCH DMRS scrambling in a dedicated SL PRS resource pool.
sl-FreqResourcePSCCH-DedicatedSL-PRS-RP Indicates the number of PRBs for PSCCH in a dedicated SL PRS resource pool.
sl-TimeResourcePSCCH-DedicatedSL-PRS-RP Indicates the number of symbols for PSCCH in a dedicated SL PRS resource pool.

SL-PRS-PowerControl **field descriptions**
dl-P0-SL-PRS Indicates P0 value for DL pathloss based open loop power control for SL PRS transmission in dedicated SL PRS resource pool.
dl-Alpha-SL-PRS Indicates alpha value for DL pathloss based open loop power control for SL PRS transmission in dedicated SL PRS resource pool.
sl-P0-SL-PRS Indicates P0 value for SL pathloss based open loop power control for SL PRS transmission in dedicated SL PRS resource pool.
sl-Alpha-SL-PRS Indicates alpha value for SL pathloss based open loop power control for SL PRS transmission in dedicated SL PRS resource pool. When the field is absent the UE applies the value 1.

– *SL-PSBCH-Config*

The IE *SL-PSBCH-Config* indicates PSBCH transmission parameters on each sidelink bandwidth part.

SL-PSBCH-Config information element

```
-- ASN1START
-- TAG-SL-PSBCH-CONFIG-START

SL-PSBCH-Config-r16 ::= SEQUENCE {
```

```
    dl-P0-PSBCH-r16         INTEGER (-16..15)                                                   OPTIONAL,    -- Need M
    dl-Alpha-PSBCH-r16      ENUMERATED {alpha0, alpha04, alpha05, alpha06, alpha07, alpha08, alpha09, alpha1}   OPTIONAL,    -- Need M

    [[
    dl-P0-PSBCH-r17         INTEGER (-202..24)                                                  OPTIONAL     -- Need M
    ]]
}

-- TAG-SL-PSBCH-CONFIG-STOP
-- ASN1STOP
```

***SL-PSBCH-Config* field descriptions**
dl-Alpha-PSBCH Indicates alpha value for DL pathloss based power control for PSBCH. When the field is not configured the UE applies the value 1.
dl-P0-PSBCH Indicates P0 value for DL pathloss based power control for PSBCH. If not configured, DL pathloss based power control is disabled for PSBCH. When *dl-P0-PSBCH-r17* is configured, the UE ignores *dl-P0-PSBCH-r16*. A Remote UE which is out of coverage, considers downlink pathloss based power control is disabled for PSBCH when *dl-P0-PSBCH* is configured.

– *SL-PSSCH-TxConfigList*

The IE *SL-PSSCH-TxConfigList* indicates PSSCH transmission parameters. When lower layers select parameters from the range indicated in IE *SL-PSSCH-TxConfigList*, the UE considers both configurations in IE *SL-PSSCH-TxConfigList* and the CBR-dependent configurations represented in IE *SL-CBR-PriorityTxConfigList*. Only one IE *SL-PSSCH-TxConfig* is provided per *SL-TypeTxSync*.

}

-- TAG-SL-PSSCH-TXCONFIGLIST-STOP
-- ASN1STOP
```

***SL-PSSCH-TxConfigList* field descriptions**
sl-MaxTxTransNumPSSCH Indicates the maximum transmission number (including new transmission and retransmission) for PSSCH.
sl-MaxTxPower This field indicates the maximum transmission power for transmission on PSSCH and PSCCH.
sl-MinMCS-PSSCH, sl-MaxMCS-PSSCH This field indicates the minimum and maximum MCS values used for transmissions on PSSCH. The UE shall ignore the minimum and maximum MCS values used for the associated MCS table(s) in *sl-ParametersAboveThres-r16* and *sl-ParametersBelowThres-r16* if *sl-ParametersAboveThres-v1650* and *sl-ParametersBelowThres-v1650* are present, respectively.
sl-MinSubChannelNumPSSCH, sl-MaxSubChannelNumPSSCH This field indicates the minimum and maximum number of sub-channels which may be used for transmissions on PSSCH.
sl-TypeTxSync This field indicates the synchronization reference type. For configurations by the eNB/gNB, only *gnbEnb* can be configured; and for pre-configuration or when this field is absent, the configuration is applicable for all synchronization reference types.
sl-ThresUE-Speed This field indicates a UE absolute speed threshold.

Conditional Presence	Explanation
CBR	The field is optionally present, Need R, when the IE *SL-PSSCH-TxParameters* is present in *SL-CBR-CommonTxConfigList, SL-UE-SelectedConfig, SIB12* or *SidelinkPreconfigNR*; otherwise the field is not present, need R.

– *SL-QoS-FlowIdentity*

The IE *SL-QoS-FlowIdentity* is used to identify a sidelink QoS flow.

***SL-QoS-FlowIdentity* information element**

```
-- ASN1START
-- TAG-SL-QOS-FLOWIDENTITY-START
```

```
SL-QoS-FlowIdentity-r16 ::=               INTEGER (1..maxNrofSL-QFIs-r16)

-- TAG-SL-QOS-FLOWIDENTITY-STOP
-- ASN1STOP
```

– *SL-QoS-Profile*

The IE *SL-QoS-Profile* is used to give the QoS parameters for a sidelink QoS flow. Need codes or conditions specified for *SL-QoS-Profile* do not apply, in case *SL-QoS-Profile* is included in *SidelinkUEInformationNR*.

SL-QoS-Profile information element

```

-- ASN1STOP
```

***SL-QoS-Profile* field descriptions**
sl-GFBR Indicate the guaranteed bit rate for a GBR QoS flow. The unit is: Kbit/s
sl-MFBR Indicate the maximum bit rate for a GBR QoS flow. The unit is: Kbit/s
sl-PQI This field indicates either the PQI for standardized PQI or non-standardized QoS parameters.
sl-Range This field indicates the range parameter of the Qos flow, as defined in clause 5.4.1.1.1, TS 23.287 [55]. It is present only for groupcast. The unit is meter.

***SL-PQI* field descriptions**
sl-AveragingWindow Indicates the Averaging Window for a QoS flow, and applies to GBR QoS flows only. Unit: ms. The default value of the IE is 2000ms.
sl-MaxDataBurstVolume Indicates the Maximum Data Burst Volume for a QoS flow, and applies to delay critical GBR QoS flows only. Unit: byte.
sl-PacketDelayBudget Indicates the Packet Delay Budget for a QoS flow. Upper bound value for the delay that a packet may experience expressed in unit of 0.5ms.
sl-PacketErrorRate Indicates the Packet Error Rate for a QoS flow. The packet error rate is expressed as Scalar x 10-k where k is the Exponent.
sl-PriorityLevel Indicates the Priority Level for a QoS flow. Values ordered in decreasing order of priority, i.e. with 1 as the highest priority and 8 as the lowest priority.
sl-StandardizedPQI Indicate the PQI for standardized PQI.

– *SL-QuantityConfig*

The IE *SL-QuantityConfig* specifies the layer 3 filtering coefficients for NR SL RSRP measurement for a destination.

***SL-QuantityConfig* information element**

```
-- ASN1START
-- TAG-SL-QUANTITYCONFIG-START

SL-QuantityConfig-r16 ::=            SEQUENCE {
    sl-FilterCoefficientDMRS-r16         FilterCoefficient                    DEFAULT fc4,
    ...
}

-- TAG-SL-QuantityConfig-STOP
-- ASN1STOP
```

***SL-QuantityConfig* field descriptions**
sl-FilterCoefficientDMRS DMRS based L3 filter configuration: Specifies L3 filter configuration for sidelink RSRP measurement result from the L1 fiter(s), as defined in TS 38.215 [9].

– *SL-RadioBearerConfig*

The IE *SL-RadioBearerConfig* specifies the sidelink DRB configuration information for NR sidelink communication.

***SL-RadioBearerConfig* information element**

```
-- ASN1START
-- TAG-SL-RADIOBEARERCONFIG-START

SL-RadioBearerConfig-r16 ::=    SEQUENCE {
   slrb-Uu-ConfigIndex-r16         SLRB-Uu-ConfigIndex-r16,
   sl-SDAP-Config-r16              SL-SDAP-Config-r16                                  OPTIONAL,    -- Cond SLRBSetup
   sl-PDCP-Config-r16              SL-PDCP-Config-r16                                  OPTIONAL,    -- Cond SLRBSetup
   sl-TransRange-r16               ENUMERATED {m20, m50, m80, m100, m120, m150, m180, m200, m220, m250, m270, m300, m350, m370,
                                       m400, m420, m450, m480, m500, m550, m600, m700, m1000, spare9, spare8, spare7, spare6,
                                       spare5, spare4, spare3, spare2, spare1}         OPTIONAL,    -- Need R
   ...
}

-- TAG-SL-RADIOBEARERCONFIG-STOP
-- ASN1STOP
```

***SL-RadioBearerConfig* field descriptions**
sl-PDCP-Config This field indicates the PDCP parameters for the sidelink DRB.
sl-SDAP-Config This field indicates how to map sidelink QoS flows to sidelink DRB.
slrb-Uu-ConfigIndex This field indicates the index of sidelink DRB configuration.
sl-TransRange This field indicates the transmission range of the sidelink DRB. The unit is meter.

Conditional Presence	Explanation
SLRBSetup	The field is mandatory present in case of sidelink DRB setup via the dedicated signalling and in case of sidelink DRB configuration via system information and pre-configuration; otherwise the field is optionally present, need M.

– *SL-RBSetConfig*

The IE SL-RBSetConfig specifies the configuration information for RB set for NR Sidelink Communication.

SL-RBSetConfig information element

```
-- ASN1START
-- TAG-SL-RBSETCONFIG-START

SL-RBSetConfig-r18 ::=           SEQUENCE {
    sl-RBSetIndex-r18               INTEGER (0..4),
    sl-NumOfSSSBRepetition-r18       INTEGER (2..9)                    OPTIONAL,     -- Need R
    sl-GapBetweenSSSBRepetition-r18   INTEGER (1..84)                   OPTIONAL      -- Need R
}

-- TAG-SL-RBSETCONFIG-STOP
-- ASN1STOP
```

SL-RBSetConfig field descriptions
sl-GapBetweenSSSBRepetition Indicate the gap between two adjacent S-SSB repetitions in frequency domain in one RB set, and the gap is between the lowest subcarrier of the upper PSBCH and the highest subcarrier of the lower PSBCH. The Unit is PRB.
sl-NumOfSSSBRepetition Indicate the number of S-SSB repetitions in frequency domain in one RB set. S-SSB in the frequency domain indicated by *sl-AbsoluteFrequencySSB* (i.e. S-SSB transmission without repetition) is applicable in region with no OCB requirement, or with OCB exemption.
sl-RBSetIndex Indicates the index of RB-set for which the configuration applies.

– *SL-RelayIndicationMP*

The IE *SL-RelayIndicationMP* is used to indicate the L2 U2N Relay UE supporting RRC connection establishment/resume for MP operation triggered by receiving *RemoteUEInformationSidelink* containing the *connectionForMP* as specified in 5.3.3.1a and 5.3.13.1a in Rel-18.

SL-RelayIndicationMP information element

```
-- ASN1START
-- TAG-SL-RELAYINDICATIONMP-START

SL-RelayIndicationMP-r18 ::=   ENUMERATED {support}

-- TAG-SL-RELAYINDICATIONMP-STOP
-- ASN1STOP
```

– *SL-RelayUE-Config*

The IE *SL-RelayUE-Config* specifies the configuration information for NR sidelink U2N Relay UE.

SL-RelayUE-Config information element

```
-- ASN1START
-- TAG-SL-RELAYUE-CONFIG-START

SL-RelayUE-Config-r17::=          SEQUENCE {
    threshHighRelay-r17               RSRP-Range                      OPTIONAL,     -- Need R
    threshLowRelay-r17                RSRP-Range                      OPTIONAL,     -- Need R
    hystMaxRelay-r17                  Hysteresis                      OPTIONAL,     -- Cond ThreshHighRelay
    hystMinRelay-r17                  Hysteresis                      OPTIONAL      -- Cond ThreshLowRelay
}

-- TAG-SL-RELAYUE-CONFIG-STOP
-- ASN1STOP
```

SL-RelayUE-Config field descriptions
threshHighRelay   Indicates the upper threshold of Uu RSRP for a UE that is in network coverage to evaluate AS layer conditions for U2N relay UE or Last U2N Relay UE operation.
threshLowRelay   Indicates the lower threshold of Uu RSRP for a UE that is in network coverage to evaluate AS layer conditions for U2N relay UE or Last U2N Relay UE operation.

Conditional Presence	Explanation
ThreshHighRelay	This field is mandatory present if threshHighRelay is included. Otherwise, the field is absent, Need R.
ThreshLowRelay	This field is mandatory present if threshLowRelay is included. Otherwise, the field is absent, Need R.

– *SL-RelayUE-ConfigMH*

The IE *SL-RelayUE-ConfigMH* specifies the threshold configuration information for NR sidelink Last U2N Relay UE or Intermediate U2N Relay UE or First U2N Relay UE during multi hop relay communication.

SL-RelayUE-ConfigMH information element

```
-- ASN1START
-- TAG-SL-RELAYUE-CONFIGMH-START

SL-RelayUE-ConfigMH-r19::=          SEQUENCE {
    sd-RSRP-ThreshDiscConfigMH-r19      SL-RSRP-Range-r16,
    sd-hystMaxRelayMH-r19               Hysteresis
}
```

```
-- TAG-SL-RELAYUE-CONFIGMH-STOP
-- ASN1STOP
```

***SL-RelayUE-ConfigMH* field descriptions**
sd-RSRP-ThreshDiscConfigMH Indicates the threshold of SD-RSRP for an Last U2N Relay UE or Intermediate U2N Relay UE to evaluate AS layer conditions for discovery. The Last U2N relay UE applies the value of this field to evaluate AS layer conditions to decide whether to respond to the discovery solicitation message when performing the multi hop U2N Relay Discovery with Model B as specified in TS 23.304 [65]. The Intermediate U2N relay UE or the First U2N relay UE applies the value of this field to evaluate AS layer conditions to decide whether to forward the discovery solicitation message when performing the multi hop U2N Relay Discovery with Model B as specified in TS 23.304 [65].

– *SL-RelayUE-ConfigU2U*

The IE *SL-RelayUE-ConfigU2U* specifies the threshold configuration information for NR sidelink U2U Relay UE.

***SL-RelayUE-ConfigU2U* information element**

```
-- ASN1START
-- TAG-SL-RELAYUE-CONFIGU2U-START

SL-RelayUE-ConfigU2U-r18::=         SEQUENCE {
    sl-RSRP-Thresh-DiscConfig-r18       SL-RSRP-Range-r16                       OPTIONAL,   -- Need R
    sd-RSRP-ThreshDiscConfig-r18        SL-RSRP-Range-r16                       OPTIONAL,   -- Need R
    sd-hystMaxRelay-r18                 Hysteresis                          OPTIONAL    -- Cond SD-RSRP-ThreshRelay
}

SL-RelayUE-ConfigU2U-v1840::=       SEQUENCE {
    sl-FilterCoefficientU2U-r18         FilterCoefficient                       OPTIONAL,   -- Need R
    sd-FilterCoefficientU2U-r18         FilterCoefficient                       OPTIONAL,   -- Need R
    ...
}

-- TAG-SL-RELAYUE-CONFIGU2U-STOP
-- ASN1STOP
```

***SL-RelayUE-ConfigU2U* field descriptions**
sd-FilterCoefficientU2U Specifies L3 filter coefficient for SD-RSRP measurement results from L1 filter, and for SL-RSRP measurements.
sd-RSRP-ThreshDiscConfig Indicates the threshold of SD-RSRP for a U2U Relay UE to evaluate AS layer conditions for discovery. The U2U relay UE applies the value of this field to evaluate AS layer conditions to decide which UE(s) can be announced as proximity UE(s) in the discovery message when performing U2U Relay Discovery with Model A, and decide whether to forward the discovery message when performing the U2U Relay Discovery with Model B or U2U relay communication with integrated Discovery as specified in TS 23.304 [65].
sl-FilterCoefficientU2U Specifies L3 filter coefficient for SL-RSRP measurement results from L1 filter.
sl-RSRP-Thresh-DiscConfig Indicates the threshold of SL-RSRP for a U2U Relay UE to evaluate AS layer conditions for discovery. The U2U relay UE applies the value of this field to decide which UE(s) can be announced as proximity UE(s) in the discovery message when performing U2U Relay Discovery with Model A.

Conditional Presence	Explanation
SD-RSRP-ThreshRelay	This field is mandatory present if *sd-RSRP-ThreshDiscConfig* is included. Otherwise, the field is absent, Need R.

– *SL-RemoteUE-Config*

The IE *SL-RemoteUE-Config* specifies the configuration information for NR sidelink U2N Remote UE.

***SL-RemoteUE-Config* information element**

```
-- ASN1START
-- TAG-SL-REMOTEUE-CONFIG-START

SL-RemoteUE-Config-r17::=          SEQUENCE {

    ...
}

-- TAG-SL-REMOTEUE-CONFIGU2U-STOP
-- ASN1STOP
```

***SL-RemoteUE-ConfigU2U* field descriptions**
sl-FilterCoefficientU2U Specifies L3 filter coefficient for SL-RSRP measurement results from L1 filter.
sl-RSRP-ThreshU2U Indicates the threshold of SL-RSRP for a U2U Remote UE to perform Relay UE selection/ reselection. The U2U remote UE applies the value of this field to evaluate AS layer conditions on direct PC5 link with the peer U2U Remote UE to trigger relay selection, and evaluate AS layer conditions on U2U relay link with U2U Relay UE to trigger relay reselection.
sd-RSRP-ThreshU2U Indicates the threshold of SD-RSRP for a U2U Remote UE to perform discovery and Relay UE selection/ reselection. For discovery, the U2U Remote UE applies the value of this field to evaluate AS layer conditions to decide whether to respond the discovery message when performing the U2U Relay Discovery with Model B as specified in TS 23.304 [65]. For relay selection and reselection, the U2U remote UE applies the value of this field to evaluate AS layer conditions on direct PC5 link to trigger relay selection, and evaluate AS layer conditions on U2U relay link to trigger relay reselection. The target U2U remote UE applies the value of this field to evaluate AS layer conditions trigger relay selection when performing U2U relay communication with integrated Discovery as specified in TS 23.304 [65].
sd-FilterCoefficientU2U Specifies L3 filter coefficient for SD-RSRP measurement results from L1 filter, and for SL-RSRP measurement.

Conditional Presence	Explanation
SL-RSRP-ThreshU2U	This field is mandatory present if *sl-RSRP-ThreshU2U* is included. Otherwise, the field is absent, Need R.
SD-RSRP-ThreshU2U	This field is mandatory present if *sd-RSRP-ThreshU2U* is included. Otherwise, the field is absent, Need R.

– *SL-ReportConfigList*

The IE *SL-ReportConfigList* concerns a list of SL measurement reporting configurations to add or modify for a destination.

SL-ReportConfigList information element

```
-- ASN1START
-- TAG-SL-REPORTCONFIGLIST-START

SL-ReportConfigList-r16 ::=         SEQUENCE (SIZE (1..maxNrofSL-ReportConfigId-r16)) OF SL-ReportConfigInfo-r16

SL-ReportConfigInfo-r16 ::=         SEQUENCE {
    sl-ReportConfigId-r16                SL-ReportConfigId-r16,
    sl-ReportConfig-r16                  SL-ReportConfig-r16,
    ...
}

SL-ReportConfigId-r16 ::=           INTEGER (1..maxNrofSL-ReportConfigId-r16)

SL-ReportConfig-r16 ::=             SEQUENCE {
    sl-ReportType-r16                  CHOICE {
        sl-Periodical-r16                  SL-PeriodicalReportConfig-r16,
        sl-EventTriggered-r16              SL-EventTriggerConfig-r16,
        ...
```

```
    },

```

***SL-ReportConfig* field descriptions**
sl-ReportType Type of the configured sidelink measurement report.

***SL-EventTriggerConfig* field descriptions**
sl-EventId Choice of sidelink measurement event triggered reporting criteria.
sl-ReportAmount Number of sidelink measurement reports applicable for *sl-EventTriggered* report type.
sl-ReportInterval Indicates the interval between periodical reports (i.e., when *sl-ReportAmount* exceeds 1) for *sl-EventTriggered* report type.
sl-ReportOnLeave indicates whether or not the UE shall initiate the sidelink measurement reporting procedure when the leaving condition is met for a frequency in *sl-FrequencyTriggeredList*, as specified in 5.8.10.4.1.
sl-ReportQuantity The sidelink measurement quantities to be included in the sidelink measurement report.
sl-TimeToTrigger Time during which specific criteria for the event needs to be met in order to trigger a sidelink measurement report.
sN-Threshold Threshold used for events S1 and S2 specified in clauses 5.8.10.4.2 and 5.8.10.4.3, respectively.

***SL-PeriodicalReportConfig* field descriptions**
sl-ReportAmount Number of sidelink measurement reports applicable for *sl-Periodical* report type.
sl-ReportInterval Indicates the interval between periodical reports (i.e., when *sl-ReportAmount* exceeds 1) for *sl-Periodical* report type.
sl-ReportQuantity The sidelink measurement quantities to be included in the sidelink measurement report.

– *SL-ResourcePool*

The IE *SL-ResourcePool* specifies the configuration information for NR sidelink communication resource pool.

***SL-ZoneConfigMCR* field descriptions**
sl-TransRange Indicates the communication range requirement for the corresponding *sl-ZoneConfigMCR-Index*. The unit is meter.
sl-ZoneConfig Indicates the zone configuration for the corresponding *sl-ZoneConfigMCR-Index*.
sl-ZoneConfigMCR-Index Indicates the codepoint of the communication range requirement field in SCI.

***SL-ResourcePool* field descriptions**
dummy, dummy1 This field is not used in the specification. If received it shall be ignored by the UE.
numSym-SL-PRS-2ndStageSCI Indicates the number symbols to be assumed for SL PRS in determining the number of coded modulation symbols for second stage SCI in a slot of a shared SL PRS resource pool.
sl-A2X-Service Presence of this field indicates the resource pool is dedicated for A2X service, i.e., not to be used for other than A2X service. Value *brid* indicates the resource pool is for BRID, value *daa* indicates the resource pool is for DAA, and value *bridAndDAA* indicates the resource pool is for both BRID and DAA. If this field is absent in all the configured resource pools, the UE may choose non-dedicated resource pool for A2X service.
sl-Additional-MCS-Table Indicates the MCS table(s) additionally used in the resource pool. 64QAM table is (pre-)configured as default. Zero, one or two can be additionally (pre-)configured using the 256QAM and/or low-SE MCS tables. If two MCS tables are indicated, 256QAM MCS table is the 1st table and qam64lowSE MCS table is the 2nd table as specified in TS 38.214 [19], clause 8.1.3.1.
sl-CPE-StartingPositionsPSCCH-PSSCH-InitiateCOT-Default Indicates CPE starting position index for the default CPE starting position, to be used for PSCCH/PSSCH transmission when UE initiating a COT.
sl-CPE-StartingPositionsPSCCH-PSSCH-InitiateCOT-List Indicates a set of selected indices that correspond to multiple candidate CPE starting positions to be used for PSCCH/PSSCH transmission when UE initiating a COT, associated per L1 priority of PSSCH.
sl-CPE-StartingPositionsPSCCH-PSSCH-WithinCOT-Default Indicates CPE starting position index for the default CPE starting position, to be used by UE for PSCCH/PSSCH transmission within a COT.
sl-CPE-StartingPositionsPSCCH-PSSCH-WithinCOT-List Indicates a set of one or multiple selected indices that correspond to one or multiple candidate CPE starting positions to be used by UE for PSCCH/PSSCH transmission within a COT, associated per L1 priority of PSSCH.
sl-CPE-StartingPositionPSFCH Indicates CPE starting position within the GP symbol before PSFCH transmission. The value is an index of the set of all candidate CPE starting positions specified in Table 5.3.1-3 of [16, TS38.211] for Ci=1 and the corresponding SCS of the SL BWP.
sl-FilterCoefficient This field indicates the filtering coefficient for long-term measurement and reference signal power derivation used for sidelink open-loop power control.
sl-InterUE-CoordinationConfig Indicates the configured sidelink inter-UE coordination parameters.
sl-IUC-RB-SetList The n-th value in the list indicates the set of PRBs of n-th PSFCH occasion that are actually used for inter-UE coordination information transmission and reception in Scheme 2. It shall be (pre-)configured such that N candidate PSFCH occasion(s) are associated with N different PRB sets. PRBs within intra-cell guard band are not used for PSFCH transmission. The length of this list is aligned with *sl-NumPSFCH-Occasions*. For each PSFCH occasion, the set of PRBs are indicated in the same format as in *sl-PSFCH-RB-Set*.
sl-NumDedicatedPRBs-ForPSFCH Indicates the value of K3 when each PSFCH transmission occupies "1 common interlace and K3 dedicated PRB(s)" (as indicated by *sl-TransmissionStructureForPSFCH*). Value prb1 corresponds to K3=1, value prb2 corresponds to K3=2, and so on. UE expects the same (pre-)configured value of *sl-NumDedicatedPRBs-ForPSFCH* across all resource pools.
sl-NumInterlacePerSubchannel Indicates the number of (K) interlaces per sub-channel within a resource pool. Value *sc1* corresponds to 1 interlace per sub-channel, and value *sc2* corresponds to 2 interlaces per sub-channel. The applicable values are related to the subcarrier spacing as below: For SCS = 15 kHz: K=1 or 2

For SCS = 30 kHz: K=1
sl-NumPSFCH-Occasions Indicates one PSCCH/PSSCH transmission has N associated candidate PSFCH occasion(s). Value *o1* corresponds to N=1, value *o2* corresponds to N=2, and so on. If the field is not configured, the UE shall use value *o1*.
sl-NumReferencePRBs-OfInterlace Indicate reference number of PRBs of one interlace within 1 RB set. Value *prb10* corresponds to 10 PRBs, and value *prb11* corresponds to 11 PRBs.
sl-NumRefSymbolLength Indicates a reference number of symbols for TBS determination.
sl-NumSubchannel Indicates the number of subchannels in the corresponding resource pool, which consists of contiguous PRBs only.
sl-PBPS-CPS-Config Indicates the allowed resource allocation schemes of full sensing only, partial sensing only, random resource selection only, or any combination(s), and the related configuration for power saving resource allocation schemes. This field is absent for *sl-TxPoolExceptional*.
sl-PreemptionEnable Indicates whether pre-emption is disabled or enabled in a resource pool. If the field is present and the value is *pl1*, *pl2*, and so on (but not *enabled*), it means that pre-emption is enabled and a priority level p_preemption is configured. If the field is present and the value is *enabled*, the pre-emption is enabled (but p_preemption is not configured) and pre-emption is applicable to all levels.
sl-PriorityThreshold-UL-URLLC Indicates the threshold used to determine whether NR sidelink transmission is prioritized over uplink transmission of priority index 1 as specified in TS 38.213[13], clause 16.2.4.3, or whether PUCCH transmission carrying SL HARQ is prioritized over PUCCH transmission carrying UCI of priority index 1 if they overlap in time as specified in TS 38.213 [13], clause 9.2.5.0.
sl-PriorityThreshold Indicates the threshold used to determine whether NR sidelink transmission is prioritized over uplink transmission of priority index 0 as specified in TS 38.213[13], clause 16.2.4.3, or whether PUCCH transmission carrying SL HARQ is prioritized over PUCCH transmission carrying UCI of priority index 0 if they overlap in time as specified in TS 38.213 [13], clause 9.2.5.0.
sl-PRS-ResourcesSharedSL-PRS-RP Indicates SL PRS resources in a slot of shared SL PRS resource pool as defined in TS 38.211 [16]. The UE can use the resource pool to transmit or receive SL-PRS only if this field is present.
sl-PSFCH-CommonInterlaceIndex Indicate the index of common interlace to meet OCB requirements when *transmissionStructureForPSFCH* is set to common interlace. Value 0 corresponds to interlace 0 is used as common interlace, value 1 corresponds to interlace 1 is used as common interlace and so on.
sl-PSFCH-PowerOffset Indicates the power offset between Tx power on one common PRB (P_common) and Tx power on one dedicated PRB (P_dedicated) when *sl-TransmissionStructureForPSFCH* is (pre-)configured as *commonInterlace*, i.e., P_common = P_dedicated - offset. UE expects the same (pre-)configured value of *sl-PSFCH-PowerOffset* across all resource pools. The unit is dB.
sl-PSFCH-RB-SetList The n-th value in the list indicates the set of PRBs that are actually used for PSFCH transmission and reception of n-th PSFCH occasion of a PSCCH/PSSCH transmission. It shall be (pre-)configured such that N candidate PSFCH occasion(s) are associated with N different PRB sets. PRBs within intra-cell guard band are not used for PSFCH transmission. The length of this list is aligned with *sl-NumPSFCH-Occasions*. For each PSFCH occasion, the set of PRBs are indicated in the same format as in *sl-PSFCH-RB-Set*.
sl-RB-Number Indicates the number of PRBs in the corresponding resource pool, which consists of contiguous PRBs only. The remaining RB cannot be used (See TS 38.214[19], clause 8).
sl-RBSetIndexOfResourcePool For interlace RB based PSCCH/PSSCH, indicates the RB set index(s) included in the resource pool. Contiguous RB sets are (pre-)configured for a resource pool.

sl-SCI-basedSL-PRS-TxTriggerSCI2-D Indicates presence of a bit-field in SCI format 2-D to trigger SL-PRS transmission by a receiving UE.
sl-StartRB-Subchannel Indicates the lowest RB index of the subchannel with the lowest index in the resource pool with respect to the lowest RB index of a SL BWP.
sl-SubchannelSize Indicates the minimum granularity in frequency domain for the sensing for PSSCH resource selection in the unit of PRB.
sl-SyncAllowed Indicates the allowed synchronization reference(s) which is (are) allowed to use the configured resource pool.
sl-SyncConfigIndex Indicates the synchronisation configuration that is associated with a reception pool, by means of an index to the corresponding entry *SL-SyncConfigList* of in *SIB12* for NR sidelink communication.
sl-TDD-Configuration Indicates the TDD configuration associated with the reception pool of the cell indicated by *sl-SyncConfigIndex*.
sl-ThreshS-RSSI-CBR Indicates the S-RSSI threshold for determining the contribution of a sub-channel to the CBR measurement. Value 0 corresponds to -112 dBm, value 1 to -110 dBm, value n to (-112 + n*2) dBm, and so on.
sl-TimeResource Indicates the bitmap of the resource pool, which is defined by repeating the bitmap with a periodicity during a SFN or DFN cycle.
sl-TimeWindowSizeCBR Indicates the time window size for CBR measurement.
sl-TimeWindowSizeCR Indicates the time window size for CR evaluation.
sl-TransmissionStructureForPSFCH Indicate each PSFCH transmission occupies "1 common interlace and K3 dedicated PRB(s)", or "1 dedicated interlace". Value *commonInterlace* corresponds to "1 common interlace and K3 dedicated PRB(s)", and value *dedicatedInterlace* corresponds to "1 dedicated interlace". UE expects the same (pre-)configured value of *transmissionStructureForPSFCH* across all resource pools.
sl-TxPercentageList Indicates the portion of candidate single-slot PSSCH resources over the total resources. Value p20 corresponds to 20%, and so on.
sl-Type1-LBT-BlockingOption1 Indicates UE may avoid selection of N consecutive resource(s) before a reserved resource of another UE when the L1 SL priority value for the transmission is higher than the L1 SL priority value of the reserved resource, and UE may also avoid selection of M consecutive resource(s) after a reserved resource of another UE when the transmitting symbols of the reserved resource overlap with LBT of the selected resource. The selection of the value N is up to UE implementation from {0, 1, 2}. M is determined based on UE implementation (at least including 0).
sl-Type1-LBT-BlockingOption2 Indicates UE may prioritize/select resource(s) in the slot(s) for transmission, if UE's transmission in slot(s) before a reserved resource is able to share its initiated COT to the reservation.
sl-X-Overhead Accounts for overhead from CSI-RS, PT-RS. If the field is absent, the UE applies value *n0* (see TS 38.214 [19], clause 8.1.3.2).

***SL-SyncAllowed* field descriptions**
gnbEnb-Sync If configured, the (pre-) configured resources can be used if the UE is directly or indirectly synchronized to eNB or gNB (i.e., synchronized to a reference UE which is directly synchronized to eNB or gNB).
gnss-Sync If configured, the (pre-) configured resources can be used if the UE is directly or indirectly synchronized to GNSS (i.e., synchronized to a reference UE which is directly synchronized to GNSS).
ue-Sync If configured, the (pre-) configured resources can be used if the UE is synchronized to a reference UE which is not synchronized to eNB, gNB and GNSS directly or indirectly.

***SL-PSCCH-Config* field descriptions**
sl-FreqResourcePSCCH Indicates the number of PRBs for PSCCH in a resource pool where it is not greater than the number PRBs of the subchannel.
sl-DMRS-ScrambleID Indicates the initialization value for PSCCH DMRS scrambling.
sl-NumReservedBits Indicates the number of reserved bits in first stage SCI.
sl-TimeResourcePSCCH Indicates the number of symbols of PSCCH in a resource pool.

***SL-PSSCH-Config* field descriptions**
sl-BetaOffsets2ndSCI Indicates candidates of beta-offset values to determine the number of coded modulation symbols for second stage SCI. The value indicates the index of Table 9.3-2 of TS 38.213 [13].
sl-PSSCH-DMRS-TimePatternList Indicates the set of PSSCH DMRS time domain patterns in terms of PSSCH DMRS symbols in a slot that can be used in the resource pool.
sl-Scaling Indicates a scaling factor to limit the number of resource elements assigned to the second stage SCI on PSSCH. Value *f0p5* corresponds to 0.5, value *f0p65* corresponds to 0.65, and so on.

***SL-PSFCH-Config* field descriptions**
sl-MinTimeGapPSFCH The minimum time gap between PSFCH and the associated PSSCH in the unit of slots.
sl-NumMuxCS-Pair Indicates the number of cyclic shift pairs used for a PSFCH transmission that can be multiplexed in a PRB.
sl-PSFCH-CandidateResourceType Indicates the number of PSFCH resources available for multiplexing HARQ-ACK information in a PSFCH transmission (see TS 38.213 [13], clause 16.3).
sl-PSFCH-HopID Scrambling ID for sequence hopping of the PSFCH used in the resource pool.
sl-PSFCH-Period Indicates the period of PSFCH resource in the unit of slots within this resource pool. If set to *sl0*, no resource for PSFCH, and HARQ feedback for all transmissions in the resource pool is disabled.
sl-PSFCH-RB-Set Indicates the set of PRBs that are actually used for PSFCH transmission and reception. The leftmost bit of the bitmap refers to the lowest RB index in the resource pool, and so on. Value 0 in the bitmap indicates that the corresponding PRB is not used for PSFCH transmission and reception while value 1 indicates that the corresponding PRB is used for PSFCH transmission and reception (see TS 38.213 [13]).

***SL-PRS-ResourceSharedSL-PRS-RP* field descriptions**
mNumberOfSymbols Indicates the number of symbols in the SL PRS resource in the shared resource pool. The maximum value that is configured for this field is 4.
sl-PRS-CombSizeN-AndReOffset Indicates a comb offset and a comb size of the SL PRS resource in a shared SL PRS resource pool (see TS 38.214 [19], clause 8.2.4).
sl-PRS-ResourceID Indicates the index of the SL PRS resource in shared resource pool.

***SL-PTRS-Config* field descriptions**
sl-PTRS-FreqDensity Presence and frequency density of SL PT-RS as a function of scheduled BW. If the field is not configured, the UE uses K_PT-RS = 2
sl-PTRS-TimeDensity Presence and time density of SL PT-RS as a function of MCS. If the field is not configured, the UE uses L_PT-RS = 1
sl-PTRS-RE-Offset Indicates the subcarrier offset for SL PT-RS . If the field is not configured, the UE applies the value *offset00* (see TS 38.211 [16], clause 8.4.1.2.2).

***SL-UE-SelectedConfigRP* field descriptions**
sl-CBR-PriorityTxConfigList Indicates the mapping between PSSCH transmission parameter (such as MCS, PRB number, retransmission number, CR limit) sets by using the indexes of the configurations in *sl-CBR-PSSCH-TxConfigList*, CBR ranges by using the indexes to the entry of the CBR range configurations in *sl-CBR-RangeConfigList*, and priority ranges. It also indicates the default PSSCH transmission parameters to be used when CBR measurement results are not available, and MCS range for the MCS tables used in the resource pool. The field *sl-CBR-PriorityTxConfigList-v1650* is present only when *sl-CBR-PriorityTxConfigList-r16* is configured.
sl-MaxNumPerReserve Indicates the maximum number of reserved PSCCH/PSSCH resources that can be indicated by an SCI.
sl-MultiReserveResource Indicates if it is allowed to reserve a sidelink resource for an initial transmission of a TB by an SCI associated with a different TB, based on sensing and resource selection procedure.
sl-NRPSFCH-EUTRA-ThresRSRP-List Indicates a list of 64 thresholds from which a threshold should be selected based on the priority in the decoded EUTRA SCI and the priority in the NR SCI to be transmitted. A NR SL resource is excluded if the corresponding PSFCH transmission occasions overlap with resources indicated or reserved by the decoded EUTRA SCI in time domain and EUTRA PSSCH RSRP in the associated data resource is above the threshold.
sl-NRPSSCH-EUTRA-ThresRSRP-List Indicates a list of 64 thresholds, and a threshold should be selected based on the priority in the decoded EUTRA SCI and the priority in the NR SCI to be transmitted. A NR SL resource is excluded if it is indicated or reserved by the decoded EUTRA SCI and EUTRA PSSCH RSRP in the associated data resource is above the threshold. If the field is present, the UE shall perform the dynamic co-channel coexistence of LTE sidelink and NR sidelink as specified in TS 38.214; otherwise it shall not perform it.
sl-ResourceReservePeriodList Set of possible resource reservation period allowed in the resource pool in the unit of ms. Up to 16 values can be configured per resource pool. The value *ms0* is always configured.
sl-RS-ForSensing Indicates whether DMRS of PSCCH or PSSCH is used for L1 RSRP measurement in the sensing operation.
sl-SensingWindow Parameter that indicates the start of the sensing window.
sl-SelectionWindowList Parameter that determines the end of the selection window in the resource selection for a TB with respect to priority indicated in SCI. Value n1 corresponds to $1*2^{\mu}$, value n5 corresponds to $5*2^{\mu}$, and so on, where μ = 0,1,2,3 refers to SCS 15,30,60,120 kHz respectively.
sl-Thres-RSRP-List Indicates a list of 64 thresholds, and the threshold should be selected based on the priority in the decoded SCI and the priority in the SCI to be transmitted. A resource is excluded if it is indicated or reserved by a decoded SCI and PSSCH/PSCCH RSRP in the associated data resource is above a threshold.

***SL-PowerControl* field descriptions**
sl-MaxTransPower Indicates the maximum value of the UE's sidelink transmission power on this resource pool when the sidelink transmission is performed only on this resource pool. The unit is dBm. If the sidelink transmission is PSFCH, and multiple resource pools are used, the maximum transmission power for PSFCH is configured as sum of fields *sl-maxTransPower* over multiple resource pools, as specified in TS 38.101-1 [15].
sl-Alpha-PSSCH-PSCCH Indicates alpha value for sidelink pathloss based power control for PSCCH/PSSCH when *sl-P0-PSSCH-PSCCH* is configured. When the field is absent the UE applies the value 1.
sl-P0-PSSCH-PSCCH Indicates P0 value for sidelink pathloss based power control for PSCCH/PSSCH. If not configured, sidelink pathloss based power control is disabled for PSCCH/PSSCH. When *sl-P0-PSSCH-PSCCH-r17* is configured, the UE ignores *sl-P0-PSSCH-PSCCH-r16*.
dl-Alpha-PSSCH-PSCCH Indicates alpha value for downlink pathloss based power control for PSCCH/PSSCH when *dl-P0-PSSCH-PSCCH* is configured. When the field is absent the UE applies the value 1.
dl-P0-PSSCH-PSCCH Indicates P0 value for downlink pathloss based power control for PSCCH/PSSCH. If not configured, downlink pathloss based power control is disabled for PSCCH/PSSCH. When *dl-P0-PSSCH-PSCCH-r17* is configured, the UE ignores *dl-P0-PSSCH-PSCCH-r16*. A Remote UE which is out of coverage, considers downlink pathloss based power control is disabled for PSCCH/PSSCH when *dl-P0-PSSCH-PSCCH* is configured.
dl-Alpha-PSFCH Indicates alpha value for downlink pathloss based power control for PSFCH when *dl-P0-PSFCH* is configured. When the field is absent the UE applies the value 1. For resource pools configured with PSFCH resources overlapping in time, this field is either not configured in any of the resource pools or configured with the same value for all the resource pools.
dl-P0-PSFCH Indicates P0 value for downlink pathloss based power control for PSFCH. If not configured, downlink pathloss based power control is disabled for PSFCH. When *dl-P0-PSFCH-r17* is configured, the UE ignores *dl-P0-PSFCH-r16.* For resource pools configured with PSFCH resources overlapping in time, this field is either not configured in any of the resource pools or configured with the same value for all the resource pools. A Remote UE which is out of coverage, considers downlink pathloss based power control is disabled for PSFCH when *dl-P0-PSFCH* is configured.

***SL-MinMaxMCS-Config* field descriptions**
sl-MaxMCS-PSSCH Indicates the maximum MCS value when using the associated MCS table. If no MCS is configured, UE autonomously selects MCS from the full range of values.
sl-MinMCS-PSSCH Indicates the minimum MCS value when using the associated MCS table. If no MCS is configured, UE autonomously selects MCS from the full range of values.

***SL-CPE-StartingPositionsPSCCH-PSSCH* field descriptions**
sl-Priority Indicates L1 priority of PSSCH.
sl-CPE-StartingPositions Indicates a set of candidate CPE starting positions specified in Table 5.3.1-3 [16, TS38.211],

Conditional Presence	Explanation
A2X	The field is mandatory present in *sl-BWP-PoolConfigA2X* and *sl-BWP-PoolConfigCommonA2X*; otherwise the field is optionally present, Need M.

– *SL-RLC-BearerConfig*

The IE *SL-RLC-BearerConfig* specifies the SL RLC bearer configuration information for NR sidelink communication.

SL-RLC-BearerConfig information element

```
-- ASN1START
-- TAG-SL-RLC-BEARERCONFIG-START

SL-RLC-BearerConfig-r16 ::=               SEQUENCE {
    sl-RLC-BearerConfigIndex-r16              SL-RLC-BearerConfigIndex-r16,
    sl-ServedRadioBearer-r16                  SLRB-Uu-ConfigIndex-r16                   OPTIONAL,   -- Cond LCH-SetupOnly
    sl-RLC-Config-r16                         SL-RLC-Config-r16                       OPTIONAL,   -- Cond LCH-Setup
    sl-MAC-LogicalChannelConfig-r16             SL-LogicalChannelConfig-r16               OPTIONAL,   -- Cond LCH-Setup
    ...,
    [[
    sl-RLC-BearerConfigIndex-v1800              SL-RLC-BearerConfigIndex-v1800              OPTIONAL    -- Need R
    ]]
}

-- TAG-SL-RLC-BEARERCONFIG-STOP
-- ASN1STOP
```

***SL-RLC-BearerConfig* field descriptions**
sl-MAC-LogicalChannelConfig The field is used to configure MAC SL logical channel parameters.
sl-RLC-BearerConfigIndex The index of the RLC bearer configuration. If the field *sl-RLC-BearerConfigIndex-v1800* is present, the UE shall ignore the *sl-RLC-BearerConfigIndex-r16* field.
sl-RLC-Config Determines the RLC mode (UM, AM) and provides corresponding parameters.
sl-ServedRadioBearer Associates the sidelink RLC Bearer with a sidelink DRB. It indicates the index of SL radio bearer configuration, which is corresponding to the RLC bearer configuration.

Conditional Presence	Explanation
LCH-Setup	The field is mandatory present upon creation of a new sidelink logical channel via the dedicated signalling and in case of sidelink DRB configuration via system information and pre-configuration; otherwise the field is optionally present, Need M.
LCH-SetupOnly	This field is mandatory present upon creation of a new sidelink logical channel via the dedicated signalling and in case of sidelink DRB configuration via system information and pre-configuration. Otherwise, it is absent, Need M.

– *SL-RLC-BearerConfigIndex*

The IE *SL-RLC-BearerConfigIndex* is used to identify a SL RLC bearer configuration.

SL-RLC-BearerConfigIndex information element

```
-- ASN1START
-- TAG-SL-RLC-BEARERCONFIGINDEX-START

SL-RLC-BearerConfigIndex-r16 ::=                INTEGER (1..maxSL-LCID-r16)

SL-RLC-BearerConfigIndex-v1800 ::=              INTEGER (maxSL-LCID-Plus1-r18..maxSL-LCID-r18)

-- TAG-RLC-BEARERCONFIGINDEX-STOP
-- ASN1STOP
```

– *SL-RLC-ChannelConfig*

The IE *SL-RLC-ChannelConfig* specifies the configuration information for PC5 Relay RLC channel between L2 U2N Relay UE and L2 U2N Remote UE, or between L2 U2U Remote UE and L2 U2U Relay UE or between L2 U2N Relay UEs (in case of multi-hop L2 U2N relay communication).

SL-RLC-ChannelConfig information element

```
-- ASN1START
-- TAG-SL-RLC-RLC-CHANNEL-CONFIG-START

SL-RLC-ChannelConfig-r17 ::=              SEQUENCE {
    sl-RLC-ChannelID-r17                    SL-RLC-ChannelID-r17,
    sl-RLC-Config-r17                       SL-RLC-Config-r16                       OPTIONAL,   -- Need M
    sl-MAC-LogicalChannelConfig-r17           SL-LogicalChannelConfig-r16               OPTIONAL,   -- Need M
    sl-PacketDelayBudget-r17                INTEGER (0..1023)                       OPTIONAL,   -- Need M
    ...}

-- TAG-SL-RLC-CHANNEL-CONFIG-STOP
-- ASN1STOP
```

***SL-RLC-ChannelConfig* field descriptions**
sl-MAC-LogicalChannelConfig The field is used to configure MAC SL logical channel parameters.
sl-RLC-ChannelID Indicates the PC5 Relay RLC channel in the link between L2 U2N Relay UE and L2 U2N Remote UE, or between L2 U2U Remote UE and L2 U2U Relay UE or between L2 U2N Relay UEs (in case of multi-hop L2 U2N relay communication).
sl-RLC-Config Determines the RLC mode (UM, AM) and provides corresponding parameters.
sl-PacketDelayBudget Indicates the Packet Delay Budget for a PC5 Relay RLC channel used in L2 U2N relay operation. Upper bound value for the delay that a packet may experience expressed in unit of 0.5ms.

– *SL-RLC-ChannelID*

The IE *SL-RLC-ChannelID* is used to identify a PC5 Relay RLC channel in the link between L2 U2N Relay UE and L2 U2N Remote UE, or between L2 U2U Relay UE and L2 U2U Remote UE.

SL-RLC-ChannelID information element

```
-- ASN1START
-- TAG-SL-RLC-CHANNELID-START

SL-RLC-ChannelID-r17 ::=    INTEGER (1..maxSL-LCID-r16)

-- TAG-SL-RLC-CHANNELID-STOP
-- ASN1STOP
```

– *SL-RLC-Config*

The IE *SL-RLC-Config* is used to specify the RLC configuration of sidelink DRB. RLC AM configuration is only applicable to the unicast NR sidelink communication.

SL-RLC-Config information element

```
-- ASN1START
-- TAG-SL-RLC-CONFIG-START

SL-RLC-Config-r16 ::=                   CHOICE {
   sl-AM-RLC-r16                          SEQUENCE {
      sl-SN-FieldLengthAM-r16                  SN-FieldLengthAM                        OPTIONAL,   -- Cond SLRBSetup
      sl-T-PollRetransmit-r16                  T-PollRetransmit,
      sl-PollPDU-r16                             PollPDU,
      sl-PollByte-r16                            PollByte,
      sl-MaxRetxThreshold-r16                    ENUMERATED { t1, t2, t3, t4, t6, t8, t16, t32 },
   ...
```

```
    },
    sl-UM-RLC-r16                           SEQUENCE {
        sl-SN-FieldLengthUM-r16                 SN-FieldLengthUM                        OPTIONAL,    -- Cond SLRBSetup
    ...
    },
    ...
}

-- TAG-SL-RLC-CONFIG-STOP
-- ASN1STOP
```

***SL-RLC-Config* field descriptions**
sl-MaxRetxThreshold Parameter value of *maxRetxThreshold* for RLC AM for NR sidelink communications, see TS 38.322 [4]. Value *t1* corresponds to 1 retransmission, value *t2* corresponds to 2 retransmissions and so on.
sl-PollByte Parameter value of *pollByte* for RLC AM for NR sidelink communications, see TS 38.322 [4]. Value *kB25* corresponds to 25 kBytes, value *kB50* corresponds to 50 kBytes and so on. *infinity* corresponds to an infinite amount of kBytes.
sl-PollPDU Parameter value of *pollPDU* for RLC AM for NR sidelink communications, seeTS 38.322 [4]. Value *p4* corresponds to 4 PDUs, value *p8* corresponds to 8 PDUs and so on. *infinity* corresponds to an infinite number of PDUs.
sl-SN-FieldLength This field indicates the RLC SN field size for NR sidelink communication, see TS 38.322 [4]. For groupcast and broadcast, only value *size6* (6 bits) is configured for the field *sl-SN-FieldLengthUM*.
sl-T-PollRetransmit Timer value of *t-PollRetransmit* for RLC AM for NR sidelink communications, see TS 38.322 [4], in milliseconds. Value *ms5* means 5 ms, value *ms10* means 10 ms and so on.

Conditional Presence	Explanation
SLRBSetup	The field is mandatory present in case of sidelink DRB setup via the dedicated signalling and in case of sidelink DRB configuration via system information and pre-configuration; otherwise the field is optionally present, need M.

– *SL-ScheduledConfig*

The IE *SL-ScheduledConfig* specifies sidelink communication/positioning configurations used for network scheduled NR sidelink communication/positioning.

***SL-ScheduledConfig* information element**

```
-- ASN1START
-- TAG-SL-SCHEDULEDCONFIG-START

SL-ScheduledConfig-r16 ::=              SEQUENCE {
    sl-RNTI-r16                          RNTI-Value,
```

```
    mac-MainConfigSL-r16                    MAC-MainConfigSL-r16                                OPTIONAL,    -- Need M
    sl-CS-RNTI-r16                         RNTI-Value                                         OPTIONAL,    -- Need M
    sl-PSFCH-ToPUCCH-r16                    SEQUENCE (SIZE (1..8)) OF INTEGER (0..15)           OPTIONAL,    -- Need M

}

-- TAG-SL-SCHEDULEDCONFIG-STOP
-- ASN1STOP
```

***SL-ScheduledConfig* field descriptions**
sl-CS-RNTI Indicate the RNTI used to scramble CRC of DCI format 3_0, see TS 38.321 [3].
sl-DCI-ToSL-Trans Indicate the time gap between DCI reception and the first sidelink transmission scheduled by the DCI (see TS 38.214 [19], clause 8.1.2.1). Value 1 included in this field corresponds to 1 slot, value 2 corresponds to 2 slots and so on, based on the numerology of sidelink BWP.
sl-PRS-CS-RNTI Indicates the RNTI used to scramble CRC of DCI format 3_2 for configured grants.
sl-PRS-RNTI Indicates the SL-PRS-RNTI used for monitoring the network scheduling to transmit NR sidelink positioning reference signal (i.e. the mode 1) for dynamic grants.
sl-PSFCH-ToPUCCH For dynamic grant and configured grant type 2, this field configures the values (in number of slot lengths) of the PSFCH to PUCCH gap. The field PSFCH-to-HARQ_feedback timing indicator in DCI format 3_0 selects one of the configured values of the PSFCH to PUCCH gap.
sl-RNTI Indicate the SL-RNTI used for monitoring the network scheduling to transmit NR sidelink communication (i.e. the mode 1).

***MAC-MainConfigSL* field descriptions**
sl-BSR-Config This field is to configure the sidelink buffer status report.
sl-PrioritizationThres Indicates the SL priority threshold, which is used to determine whether SL TX is prioritized over UL TX, as specified in TS 38.321 [3]. Network does not configure the *sl-PrioritizationThres* and the *ul-PrioritizationThres* to the UE separately.
ul-PrioritizationThres Indicates the UL priority threshold, which is used to determine whether SL TX is prioritized over UL TX, as specified in TS 38.321 [3]. Network does not configure the *sl-PrioritizationThres* and the *ul-PrioritizationThres* to the UE separately.

– *SL-SDAP-Config*

The IE *SL-SDAP-Config* is used to set the configurable SDAP parameters for a Sidelink DRB.

***SL-SDAP-Config* information element**

```
-- ASN1START
-- TAG-SL-SDAP-CONFIG-START

SL-SDAP-Config-r16 ::=              SEQUENCE {
    sl-SDAP-Header-r16                 ENUMERATED {present, absent},
    sl-DefaultRB-r16                   BOOLEAN,
    sl-MappedQoS-Flows-r16              CHOICE {
        sl-MappedQoS-FlowsList-r16           SEQUENCE (SIZE (1..maxNrofSL-QFIs-r16)) OF SL-QoS-Profile-r16,
        sl-MappedQoS-FlowsListDedicated-r16    SL-MappedQoS-FlowsListDedicated-r16
    }                                                                                  OPTIONAL,   -- Need M
    sl-CastType-r16                    ENUMERATED {broadcast, groupcast, unicast, spare1}              OPTIONAL,   -- Need M
```

```
    ...
}

SL-MappedQoS-FlowsListDedicated-r16 ::= SEQUENCE {
    sl-MappedQoS-FlowsToAddList-r16        SEQUENCE (SIZE (1..maxNrofSL-QFIs-r16)) OF SL-QoS-FlowIdentity-r16  OPTIONAL,    -- Need N
    sl-MappedQoS-FlowsToReleaseList-r16     SEQUENCE (SIZE (1..maxNrofSL-QFIs-r16)) OF SL-QoS-FlowIdentity-r16  OPTIONAL     -- Need N
}

-- TAG-SL-SDAP-CONFIG-STOP
-- ASN1STOP
```

***SL-SDAP-Config* field descriptions**
sl-DefaultRB Indicates whether or not this is the default sidelink DRB for this NR sidelink communication transmission destination. Among all configured instances of *SL-SDAP-Config* for this destination, this field shall be set to *true* in at most one instance of *SL-SDAP-Config* and to *false* in all other instances.
sl-MappedQoS-Flows Indicates QoS flows to be mapped to the sidelink DRB. If the field is included in dedicated signalling, it is set to *sl-MappedQoS-FlowsListDedicated*; otherwise, it is set to *sl-MappedQoS-FlowsList*.
sl-MappedQoS-FlowsList Indicates the list of QoS profiles of the NR sidelink communication transmission destination mapped to this sidelink DRB.
sl-MappedQoS-FlowsToAddList Indicates the list of SL QoS flows ID of the NR sidelink communication transmission destination to be additionally mapped to this sidelink DRB.
sl-MappedQoS-FlowsToReleaseList Indicates the list of SL QoS flows ID of the NR sidelink communication transmission destination to be released from existing QoS flow to SLRB mapping of this sidelink DRB.
sl-SDAP-Header Indicates whether or not a SDAP header is present on this sidelink DRB. The field cannot be changed after a sidelink DRB is established. This field is set to present if the field *sl-DefaultRB* is set to *true*.

– *SL-ServingCellInfo*

The IE *SL-ServingCellInfo* is used to indicate the L2 U2N Relay UE's PCell/camping cell, which is considered as PCell/camping cell by the L2 U2N Remote UEs connecting with this L2 U2N Relay UE.

SL-ServingCellInfo information element

```
-- ASN1START
-- TAG-SL-SERVINGCELLINFO-START

SL-ServingCellInfo-r17 ::=    SEQUENCE {
    sl-PhysCellId-r17           PhysCellId,
    sl-CarrierFreqNR-r17         ARFCN-ValueNR
}

-- TAG-SL-SERVINGCELLINFO-STOP
```

```
-- ASN1STOP
```

***SL-ServingCellInfo* field descriptions**
sl-CarrierFreqNR Indicates the DL frequency of the cell indicated by *sl-PhysCellId*.
sl-PhysCellId Indicates the PCI of the PCell.

– *SL-SourceIdentity*

The IE *SL-SourceIdentity* is used to identify a source of a NR sidelink communication.

SL-SourceIdentity information element

```
-- ASN1START
-- TAG-SL-SOURCEIDENTITY-START

SL-SourceIdentity-r17 ::=   BIT STRING (SIZE (24))

-- TAG-SL-SOURCEIDENTITY-STOP
-- ASN1STOP
```

– *SL-SRAP-Config*

The IE *SL-SRAP-Config* is used to set the configurable SRAP parameters used by L2 U2N Relay UE and L2 U2N Remote UE as specified in TS 38.351 [66].

SL-SRAP-Config information element

```
-- ASN1START
-- TAG-SL-SRAP-CONFIG-START

SL-SRAP-Config-r17 ::=              SEQUENCE {
    sl-LocalIdentity-r17               INTEGER (0..255)                                          OPTIONAL, -- Need M
    sl-MappingToAddModList-r17          SEQUENCE (SIZE (1..maxLC-ID)) OF SL-MappingToAddMod-r17        OPTIONAL, -- Need N
    sl-MappingToReleaseList-r17         SEQUENCE (SIZE (1..maxLC-ID)) OF SL-RemoteUE-RB-Identity-r17    OPTIONAL, -- Need N
    ...
}

SL-MappingToAddMod-r17 ::=          SEQUENCE {
    sl-RemoteUE-RB-Identity-r17         SL-RemoteUE-RB-Identity-r17,
    sl-EgressRLC-ChannelUu-r17          Uu-RelayRLC-ChannelID-r17                                  OPTIONAL, -- Cond L2RelayUE
    sl-EgressRLC-ChannelPC5-r17         SL-RLC-ChannelID-r17                                      OPTIONAL, -- Need N
    ...,
    [[
```

```
   sl-EgressRLC-Channel-UL-r19          SL-RLC-ChannelID-r17                                  OPTIONAL, -- Need N
   sl-EgressRLC-Channel-DL-r19          SL-RLC-ChannelID-r17                                  OPTIONAL  -- Need N
   ]]
}

SL-RemoteUE-RB-Identity-r17 ::=       CHOICE {
   srb-Identity-r17                    INTEGER (0..3),
   drb-Identity-r17                    DRB-Identity,
   ...
}

-- TAG-SL-SRAP-CONFIG-STOP
-- ASN1STOP
```

***SL-SRAP-Config* field descriptions**
sl-LocalIdentity Indicates the local UE ID of the L2 U2N Remote UE (in case of single hop) or local UE ID of the directly or indirectly connected remote UE (in case of multi hop) used in SRAP as specified in TS 38.351 [66].
sl-MappingToAddModList Indicates the list of mappings between the bearer identity of the L2 U2N Remote UE and the egress RLC channel as specified in TS 38.351 [66] to be added or modified.
sl-MappingToReleaseList Indicates the list of mappings between the bearer identity of the L2 U2N Remote UE and the egress RLC channel as specified in TS 38.351 [66] to be released.
sl-RemoteUE-RB-Identity Identity of the end-to-end Uu bearer identity of the L2 U2N Remote UE. The value 3 for the field *srb-identity-r17* (i.e., for configuring SRB3) is not supported in this version of the specification.
sl-EgressRLC-Channel-DL Indicates the egress RLC channel on PC5 Hop for downlink transmissions at the L2 Intermediate U2N Relay UE.
sl-EgressRLC-Channel-UL Indicates the egress RLC channel on PC5 Hop for uplink transmissions at the L2 Intermediate U2N Relay UE.
sl-EgressRLC-ChannelUu Indicates the egress RLC channel on Uu Hop for uplink transmissions at the L2 U2N Relay UE or L2 Last U2N Relay UE.
sl-EgressRLC-ChannelPC5 Indicates the egress RLC channel on PC5 Hop for downlink transmissions at the L2 U2N Relay UE or L2 Last U2N Relay UE and for uplink transmissions at the L2 U2N Remote UE.

Conditional Presence	Explanation
L2RelayUE	For L2 U2N Relay UE for single hop or for L2 Last U2N Relay UE for multi hop, the field is optionally present, Need M. Otherwise, it is absent.

– *SL-SRAP-ConfigId*

The IE *SL-SRAP-ConfigId* is used to identify a SRAP configuration for a indirectly connected L2 U2N Remote UE at the L2 U2N Relay UE.

SL-SRAP-ConfigId information element

```
-- ASN1START
-- TAG-SL-SRAP-CONFIGID-START

SL-SRAP-ConfigId-r19 ::=    INTEGER (1.. maxNrofRemoteUE-r17)

-- TAG-SL-SRAP-CONFIGID-STOP
-- ASN1STOP
```

– *SL-SRAP-ConfigU2U*

The IE *SL-SRAP-ConfigU2U* is used to set the configurable SRAP parameters used by L2 U2U Relay UE and L2 U2U Remote UE as specified in TS 38.351 [66].

SL-SRAP-ConfigU2U information element

```
-- ASN1START
-- TAG-SL-SRAP-CONFIGU2U-START

SL-SRAP-ConfigU2U-r18 ::=             SEQUENCE {
    sl-MappingToAddMod-U2U-List-r18       SEQUENCE (SIZE (1..maxSL-LCID-r16)) OF SL-MappingConfig-U2U-r18      OPTIONAL, -- Need N
    sl-MappingToRelease-U2U-List-r18      SEQUENCE (SIZE (1..maxSL-LCID-r16)) OF SLRB-Uu-ConfigIndex-r16       OPTIONAL  -- Need N
}

SL-MappingConfig-U2U-r18 ::=          SEQUENCE {
    sl-RemoteUE-SLRB-Identity-r18         SLRB-Uu-ConfigIndex-r16,
    sl-EgressRLC-ChannelPC5-r18           SL-RLC-ChannelID-r17,
    ...
}

SL-SRAP-ConfigU2U field descriptions
sl-MappingToAddMod-U2U-List Indicates the list of mappings between the end-to-end sidelink DRB of a given L2 U2U Remote UE and the egress PC5 Relay RLC channel used by L2 U2U Remote UE and L2 U2U Relay UE when acting as Tx UE, as specified in TS 38.351 [66] to be added or modified.
sl-MappingToRelease-U2U-List Indicates the list of mappings between the end-to-end sidelink DRB of a given L2 U2U Remote UE and the egress PC5 Relay RLC channel as specified in TS 38.351 [66] to be released.
sl-EgressRLC-ChannelPC5 Indicates the egress PC5 Relay RLC channel for sidelink transmissions at the L2 U2U Relay UE and at the L2 U2U Remote UE.
sl-RemoteUE-SLRB-Identity Identity of the end-to-end sidelink DRB of the L2 U2U Remote UE.

– *SL-SyncConfig*

The IE *SL-SyncConfig* specifies the configuration information concerning reception of synchronisation signals from neighbouring cells as well as concerning the transmission of synchronisation signals for sidelink communication.

SL-SyncConfig information element

```
-- ASN1START
-- TAG-SL-SYNCCONFIG-START

SL-SyncConfigList-r16 ::=        SEQUENCE (SIZE (1..maxSL-SyncConfig-r16)) OF SL-SyncConfig-r16

SL-SyncConfig-r16 ::=            SEQUENCE {

***SL-SyncConfig* field descriptions**
gnss-Sync If configured, the synchronization configuration is used for SLSS transmission/reception when the UE is synchronized to GNSS. If not configured, the synchronization configuration is used for SLSS transmission/reception when the UE is synchronized to eNB/gNB.
sl-SyncRefMinHyst Hysteresis when evaluating a SyncRef UE using absolute comparison.
sl-SyncRefDiffHyst Hysteresis when evaluating a SyncRef UE using relative comparison.
sl-NumSSB-WithinPeriod Indicates the number of sidelink SSB transmissions within one sidelink SSB period. The applicable values are related to the subcarrier spacing and frequency as follows: FR1, SCS = 15 kHz: 1 FR1, SCS = 30 kHz: 1, 2 FR1, SCS = 60 kHz: 1, 2, 4 FR2, SCS = 60 kHz: 1, 2, 4, 8, 16, 32 FR2, SCS = 120 kHz: 1, 2, 4, 8, 16, 32, 64 All values in *sl-NumSSB-WithinPeriod* in *sl-SSB-TimeAllocation1* is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured. All values in *sl-NumSSB-WithinPeriod* in *sl-SSB-TimeAllocation2* is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured. All values in *sl-NumSSB-WithinPeriod* in *sl-SSB-TimeAllocation3* is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured.
sl-TimeOffsetSSB Indicates the slot offset from the start of sidelink SSB period to the first sidelink SSB. All values in *sl-TimeOffsetSSB* in *sl-SSB-TimeAllocation1* is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured. All values in *sl-TimeOffsetSSB* in *sl-SSB-TimeAllocation2* is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured. All values in *sl-TimeOffsetSSB* in *sl-SSB-TimeAllocation3* is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured.
sl-TimeInterval Indicates the slot interval between neighboring sidelink SSBs. This value is applicable when there are more than one sidelink SSBs within one sidelink SSB period. All values in *sl-TimeInterval* in *sl-SSB-TimeAllocation1* is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured. All values in *sl-TimeInterval* in *sl-SSB-TimeAllocation2* is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured. All values in *sl-TimeInterval* in *sl-SSB-TimeAllocation3* is set to be same across all carrier frequencies configured for UEs performing NR sidelink communication on multiple carrier frequencies, if configured.
sl-SSID Indicates the ID of sidelink synchronization signal associated with different synchronization priorities.
syncInfoReserved Reserved for future use.
syncTxThreshIC, syncTxThreshOoC Indicates the thresholds used while in coverage and out of coverage, respectively. Value 0 corresponds to -infinity, value 1 to -115 dBm, value 2 to -110 dBm, and so on (i.e. in steps of 5 dBm) until value 12, which corresponds to -60 dBm, while value 13 corresponds to +infinity.

– *SL-Thres-RSRP-List*

IE *SL-Thres-RSRP-List* indicates a threshold used for sensing based UE autonomous resource selection (see TS 38.215 [9]). A resource is excluded if it is indicated or reserved by a decoded SCI and PSSCH/PSCCH RSRP in the associated data resource is above the threshold defined by IE *SL-Thres-RSRP-List*. A NR sidelink resource is excluded if the corresponding PSFCH transmission occasions overlap with resources indicated or reserved by the decoded EUTRA SCI in time domain and EUTRA PSSCH RSRP in the associated data resource is above the threshold defined by IE *sl-NRPSFCH-EUTRA-ThresRSRP-List*. A NR sidelink resource is excluded if it is indicated or reserved by the decoded EUTRA SCI and EUTRA PSSCH RSRP in the associated data resource is above the threshold defined by IE *sl-NRPSSCH-EUTRA-ThresRSRP-List*. Value 0 corresponds to minus infinity dBm, value 1 corresponds to -128dBm, value 2 corresponds to -126dBm, value n corresponds to (-128 + (n-1)*2) dBm and so on, value 66 corresponds to infinity dBm.

SL-Thres-RSRP-List information element

```
-- ASN1START
-- TAG-SL-THRES-RSRP-LIST-START

SL-Thres-RSRP-List-r16 ::=    SEQUENCE (SIZE (64)) OF SL-Thres-RSRP-r16

SL-Thres-RSRP-r16 ::=        INTEGER (0..66)

-- TAG-SL-THRES-RSRP-LIST-STOP
-- ASN1STOP
```

– *SL-TxPower*

The IE *SL-TxPower* is used to limit the UE's sidelink transmission power on a carrier frequency. The unit is dBm. Value minusinfinity corresponds to –infinity.

SL-TxPower information element

```
-- ASN1START
-- TAG-SL-TXPOWER-START

SL-TxPower-r16 ::=                CHOICE{
    minusinfinity-r16                NULL,
    txPower-r16                     INTEGER (-30..33)
}

-- TAG-SL-TXPOWER-STOP
-- ASN1STOP
```

– *SL-TypeTxSync*

The IE *SL-TypeTxSync* indicates the synchronization reference type.

SL-TypeTxSync information element

```
-- ASN1START
-- TAG-SL-TYPETXSYNC-START

SL-TypeTxSync-r16 ::=                ENUMERATED {gnss, gnbEnb, ue}

-- TAG-SL-TYPETXSYNC-STOP
-- ASN1STOP
```

– *SL-UE-SelectedConfig*

IE *SL-UE-SelectedConfig* specifies sidelink communication/positioning configurations used for UE autonomous resource selection.

SL-UE-SelectedConfig information element

```
-- ASN1START
-- TAG-SL-UE-SELECTEDCONFIG-START

SL-UE-SelectedConfig-r16 ::=             SEQUENCE {
    sl-PSSCH-TxConfigList-r16               SL-PSSCH-TxConfigList-r16                               OPTIONAL,    -- Cond SIB12
    sl-ProbResourceKeep-r16                 ENUMERATED {v0, v0dot2, v0dot4, v0dot6, v0dot8}            OPTIONAL,    -- Need R
    sl-ReselectAfter-r16                    ENUMERATED {n1, n2, n3, n4, n5, n6, n7, n8, n9}            OPTIONAL,    -- Need R
    sl-CBR-CommonTxConfigList-r16            SL-CBR-CommonTxConfigList-r16                           OPTIONAL,    -- Need R
    ul-PrioritizationThres-r16              INTEGER (1..16)                                         OPTIONAL,    -- Need R
    sl-PrioritizationThres-r16              INTEGER (1..8)                                          OPTIONAL,    -- Need R
    ...,

    ]]
}

-- TAG-SL-UE-SELECTEDCONFIG-STOP
-- ASN1STOP
```

***SL-UE-SelectedConfig* field descriptions**
sl-PrioritizationThres Indicates the SL priority threshold, which is used to determine whether SL TX is prioritized over UL TX, as specified in TS 38.321 [3]. Network does not configure the *sl-PrioritizationThres* and the *ul-PrioritizationThres* to the UE separately.
sl-ProbResourceKeep Indicates the probability with which the UE keeps the current resource when the resource reselection counter reaches zero for sensing based UE autonomous resource selection (see TS 38.321 [3]).
sl-PSSCH-TxConfigList Indicates PSSCH TX parameters such as MCS, sub-channel number, retransmission number, associated to different UE absolute speeds and different synchronization reference types for UE autonomous resource selection.
sl-ReselectAfter Indicates the number of consecutive skipped transmissions before triggering resource reselection for sidelink communication (see TS 38.321 [3]).
ul-PrioritizationThres Indicates the UL priority threshold, which is used to determine whether SL TX is prioritized over UL TX, as specified in TS 38.321 [3]. Network does not configure the *sl-PrioritizationThres* and the *ul-PrioritizationThres* to the UE separately.

Conditional Presence	Explanation
SIB12	This field is optional present if included within *SIB12*, need R. Otherwise, the field is absent.
notSIB12	The field is absent in *SIB12*. Otherwise, it is optional present, Need R

– *SL-ZoneConfig*

The IE *SL-ZoneConfig* is used to configure the zone ID related parameters.

***SL-ZoneConfig* information element**

```
-- ASN1START
-- TAG-SL-ZONECONFIG-START

SL-ZoneConfig-r16 ::=           SEQUENCE {
    sl-ZoneLength-r16              ENUMERATED { m5, m10, m20, m30, m40, m50, spare2, spare1},
    ...
}

-- TAG-SL-ZONECONFIG-STOP
-- ASN1STOP
```

***SL-ZoneConfig* field descriptions**
sl-ZoneLength Indicates the length of each geographic zone.

– *SLRB-Uu-ConfigIndex*

The IE *SLRB-Uu-ConfigIndex* is used to identify a sidelink DRB configuration from the network side, or to indicate an end-to-end sidelink DRB by L2 U2U Relay UE in *SidelinkUEInformation* message.

SLRB-Uu-ConfigIndex information element

```
-- ASN1START
-- TAG-SLRB-UU-CONFIGINDEX-START

SLRB-Uu-ConfigIndex-r16 ::=               INTEGER (1..maxNrofSLRB-r16)

-- TAG-SLRB-UU-CONFIGINDEX-STOP
-- ASN1STOP
```

6.3.6 MBS information elements

– *CarrierFreqListMBS*

The IE *CarrierFreqListMBS* is used to inform network of the frequencies on which the UE is receiving or interested to receive MBS broadcast service via a broadcast MRB.

CarrierFreqListMBS information element

```
-- ASN1START
-- TAG-CARRIERFREQLISTMBS-START

CarrierFreqListMBS-r17 ::=     SEQUENCE (SIZE (1..maxFreqMBS-r17)) OF ARFCN-ValueNR

-- TAG-CARRIERFREQLISTMBS-STOP
-- ASN1STOP
```

– *CFR-ConfigMCCH-MTCH*

The IE *CFR-ConfigMCCH-MTCH* is used to configure the common frequency resource used for MCCH, multicast MCCH and MTCH reception.

CFR-ConfigMCCH-MTCH information element

```
-- ASN1START
-- TAG-CFR-CONFIGMCCH-MTCH-START

CFR-ConfigMCCH-MTCH-r17 ::= SEQUENCE {
    locationAndBandwidthBroadcast-r17        LocationAndBandwidthBroadcast-r17  OPTIONAL,  -- Need S
    pdsch-ConfigMCCH-r17                   PDSCH-ConfigBroadcast-r17        OPTIONAL,  -- Need S
    commonControlResourceSetExt-r17          ControlResourceSet              OPTIONAL   -- Cond NotSIB1CommonControlResource
```

```
}

LocationAndBandwidthBroadcast-r17 ::= CHOICE {
    sameAsSib1ConfiguredLocationAndBW        NULL,
    locationAndBandwidth                   INTEGER (0..37949)
}

-- TAG-CFR-CONFIGMCCH-MTCH-STOP
-- ASN1STOP
```

***CFR-ConfigMCCH-MTCH* field descriptions**
commonControlResourceSetExt An additional common control resource set which may be configured and used for *searchSpaceMCCH*/*searchSpaceMTCH* or UE-specific search space in the BWP where *searchSpaceMCCH* is configured. It is contained in the bandwidth of the CFR for broadcast and larger than CORESET#0.
locationAndBandwidthBroadcast Indicates starting PRB and the number of PRBs of CFR used for MCCH, multicast MCCH and MTCH reception. Value *sameAsSib1ConfiguredLocationAndBW* means the CFR for broadcast or multicast has the same location and size as the *locationAndBandwidth* for initial BWP (for (e)RedCap UEs: *initialDownlinkBWP-RedCap* if it is configured and includes CD-SSB and the entire CORESET#0) configured in *SIB1*. Value *locationAndBandwidth* is used to configure CFR with bandwidth that is larger than and fully contains the bandwidth for the initial DL BWP (for (e)RedCap UEs: *initialDownlinkBWP-RedCap* if it is configured and includes CD-SSB and the entire CORESET#0) configured in *SIB1* and CORESET#0. The value of the field shall be interpreted as defined in TS 38.214 [19] with assumptions as described in TS 38.213 [13]. This field is not included in *cfr-ConfigMCCH-MTCH-RedCap* if *initialDownlinkBWP-RedCap* in *SIB1* is configured but does not include CD-SSB and the entire CORESET#0. If the field is absent, the CFR for broadcast or multicast has the same location and size as CORESET#0.
pdsch-ConfigMCCH Indicates PDSCH parameters used for MCCH or multicast MCCH transmission. If the field is absent, PDSCH parameters used for MCCH or multicast MCCH are the same as those of PDSCH configuration provided in *initialDownlinkBWP* in *SIB1*.

Conditional Presence	Explanation
NotSIB1CommonControlResource	The field is optional present in case *commonControlResourceSet* is not configured in SIB1, Need R, otherwise it is absent.

– *DRX-ConfigPTM*

The IE *DRX-ConfigPTM* is used to configure DRX related parameters for PTM transmission as specified in TS 38.321 [3].

DRX-ConfigPTM information element

```
-- ASN1START
-- TAG-DRX-CONFIGPTM-START

DRX-ConfigPTM-r17 ::=           SEQUENCE {

      ms10240                       INTEGER(0..10239)
   },
   drx-SlotOffsetPTM-r17              INTEGER (0..31)
}

-- TAG-DRX-CONFIGPTM-STOP
-- ASN1STOP
```

***DRX-ConfigPTM* field descriptions**
drx-HARQ-RTT-TimerDL-PTM Value in number of symbols of the CFR where the transport block was received.
drx-InactivityTimerPTM Value in multiple integers of 1 ms. *ms0* corresponds to 0, *ms1* corresponds to 1 ms, *ms2* corresponds to 2 ms, and so on.
drx-LongCycleStartOffsetPTM *drx-LongCycle-PTM* in ms and *drx-StartOffset-PTM* in multiples of 1 ms.
drx-onDurationTimerPTM Value in multiples of 1/32 ms (subMilliSeconds) or in ms (milliSecond). For the latter, value *ms1* corresponds to 1 ms, value *ms2* corresponds to 2 ms, and so on.
drx-RetransmissionTimerDL-PTM Value in number of slot lengths of the CFR where the transport block was received. value *sl0* corresponds to 0 slots, *sl1* corresponds to 1 slot, *sl2* corresponds to 2 slots, and so on.
drx-SlotOffsetPTM Value in 1/32 ms. Value 0 corresponds to 0 ms, value 1 corresponds to 1/32 ms, value 2 corresponds to 2/32 ms, and so on.

Conditional Presence	Explanation
HARQFeedback	The field is mandatory present if HARQ feedback is enabled for a G-RNTI/G-CS-RNTI associated with this DRX configuration. It is optionally present. Need R, otherwise.

– *MBS-NeighbourCellList*

The IE *MBS-NeighbourCellList* indicates a list of neighbour cells where ongoing MBS sessions provided via broadcast/multicast MRB in the current cell may also be provided, as indicated in the *mtch-NeighbourCell*.

MBS-NeighbourCellList information element

```
-- ASN1START
-- TAG-MBS-NEIGHBOURCELLLIST-START

MBS-NeighbourCellList-r17 ::=    SEQUENCE (SIZE (0..maxNeighCellMBS-r17)) OF MBS-NeighbourCell-r17

   physCellId-r17                 PhysCellId,
   carrierFreq-r17                ARFCN-ValueNR                              OPTIONAL  -- Need S
}

-- TAG-MBS-NEIGHBOURCELLLIST-STOP
-- ASN1STOP
```

***MBS-NeighbourCellList* field descriptions**
carrierFreq Indicates the frequency of the neighbour cell indicated by *physCellId*. Absence of the IE means that the neighbour cell is on the same frequency as the current cell.

– *MBS-NonServingInfoList*

The IE *MBS-NonServingInfoList* is used to inform network of the frequencies, CFR information and subcarrier spacing for MBS broadcast reception on the non-serving cell.

***MBS-NonServingInfoList* information element**

```
-- ASN1START
-- TAG-MBS-NONSERVINGINFOLIST-START

MBS-NonServingInfoList-r18 ::=   SEQUENCE (SIZE (1..maxFreqMBS-r17)) OF NonServingInfo-r18

NonServingInfo-r18 ::=          SEQUENCE {
   freqInfoMBS-r18               FreqInfoMBS-r18                                  OPTIONAL,
   cfr-InfoMBS-r18               CHOICE {

-- ASN1STOP
```

***MBS-NonServingInfoList* field descriptions**
freqInfoMBS Indicates MBS frequency of interest and the frequency band of the non-serving cell for MBS broadcast reception as specified in clause 5.9.4.3.
cfr-infoMBS Indicates the CFR information of the non-serving cell for MBS broadcast reception. It is up to UE implementation to choose *cfr-Bandwidth* or *cfr-LocationAndBW* as the reported CFR information.
cfr-Bandwidth Indicates the CFR bandwidth of the non-serving cell for MBS broadcast reception.
cfr-LocationAndBW Indicates the CFR location and bandwidth of the non-serving cell for MBS broadcast reception.
subcarrierSpacing Indicates the subcarrier spacing of the CORESET#0 of the non-serving cell for MBS broadcast reception.

***CFR-LocationAndBW* field descriptions**
locationAndBandwidthMBS Indicates the starting PRB and the number of PRBs of CFR used for MBS broadcast reception from non-serving cell. The value of the field shall be interpreted as resource indicator value (RIV) as defined in TS 38.214 [19] with assumptions as described in TS 38.213 [13]. The first PRB is a PRB determined by *subcarrierSpacing*, *offsetToCarrierMBS* and *absoluteFrequencyPointA-MBS* of the non-serving cell.
absoluteFrequencyPointA-MBS Indicates the absolute frequency position of the reference resource block (common RB 0) of the non-serving cell for MBS broadcast reception. Its lowest subcarrier is also known as Point A (see TS 38.211 [16], clause 4.4.4.2).
offsetToCarrierMBS Indicates the offset in frequency domain between Point A (lowest subcarrier of common RB 0) and the lowest usable subcarrier on this carrier in number of PRBs (using the *subcarrierSpacing* indicated for the non-serving cell).

– *MBS-ServiceList*

The IE *MBS- ServiceList* is used to inform the network of the MBS services that the UE is receiving or interested to receive.

MBS-ServiceList information element

```
-- ASN1START
-- TAG-MBS-SERVICELIST-START

MBS-ServiceList-r17 ::=        SEQUENCE (SIZE (1..maxNrofMBS-ServiceListPerUE-r17)) OF MBS-ServiceInfo-r17

MBS-ServiceInfo-r17 ::=        SEQUENCE {

```

***MBS-SessionInfoList* field descriptions**
g-RNTI G-RNTI used to scramble the scheduling and transmission of MTCH.
headerCompression If *rohc* is configured, the UE shall apply the configured ROHC profile(s) in downlink.
mbs-SessionAreaList Indicates the list of intended service areas associated with an MBS broadcast session in an NTN cell. If this field is absent, the MBS broadcast session can be received within the MBS Service Area.
mbs-SessionId Indicates an identifier of the MBS session provided by the MTCH.
mrb-listBroadcast A list of broadcast MRBs to which the associated broadcast MBS session is mapped to.
mtch-neighbourCell Indicates neighbour cells which provide this service on MTCH. The first bit is set to 1 if the service is provided on MTCH in the first cell in *mbs-NeighbourCellList*, otherwise it is set to 0. The second bit is set to 1 if the service is provided on MTCH in the second cell in *mbs-NeighbourCellList*, and so on. If the service is not available in any neighbouring cell and *mbs-NeighbourCellList* is signalled, the network sets all bits in this field to 0. The field is absent when *mbs-NeighbourCellList* is absent or an empty *mbs-NeighbourCellList* is signalled. If this field is absent when *mbs-NeighbourCellList* is absent or a non-empty *mbs-NeighbourCellList* is signalled, the related service may or may not be available in any neighbouring cell, i.e. the UE cannot determine the presence or absence of an MBS service in neighbouring cells based on the absence of this field. If this field is absent and an empty *mbs-NeighbourCellList* is signalled, then the UE shall assume that MBS broadcast services signalled in *mbs-SessionInfoList* in the *MBSBroadcastConfiguration* message are not provided in any neighbour cell.
mtch-schedulingInfo Indicates the index of DRX configuration entry in *drx-ConfigPTM-List* that is used for scheduling the MTCH. The value 0 corresponds to the first entry in *drx-ConfigPTM-List*, the value 1 corresponds to the second entry in *drx-ConfigPTM-List* and so on. In case *mtch-schedulingInfo* is absent for a G-RNTI (i.e. no PTM DRX), the UE shall monitor for PDCCH scrambled with G-RNTI in any slot according to the search space configured for MTCH [see TS 38.213 [13], clause 10.1].
mtch-SSB-MappingWindowIndex Indicates the index of *MTCH-SSB-MappingWindowCycleOffset* configuration entry in *MTCH-SSB-MappingWindowList*. The value 0 corresponds to the first entry in *MTCH-SSB-MappingWindowList*, the value 1 corresponds to the second entry in *MTCH-SSB-MappingWindowList* and so on. This field is set to the same value for all MBS sessions mapped to the same G-RNTI.
pdcp-SN-SizeDL Indicates that PDCP sequence number size of 12 bits is used, as specified in TS 38.323 [5]. When the field is absent the UE applies the value as specified in 9.1.1.7.
pdschConfigIndex Indicates the index of PDSCH configuration entry in *pdschConfigList* for MTCH. Value 0 corresponds to the first entry in *pdschConfigList*, the value 1 corresponds to the second entry in *pdschConfigList* and so on. When the field is absent the UE applies the first entry in pdschConfigList for MTCH.
sn-FieldLength Indicates that the RLC SN field size of 6 bits is used, see TS 38.322 [4]. When the field is absent the UE applies the value as specified in 9.1.1.7.
t-Reassembly Timer for reassembly in TS 38.322 [4], in milliseconds. Value ms0 means 0 ms, value ms5 means 5 ms and so on. When the field is absent the UE applies the value in specified in 9.1.1.7.
t-Reordering Value in ms of t-Reordering specified in TS 38.323 [5]. Value ms1 corresponds to 1 ms, value ms10 corresponds to 10 ms, and so on. When the field is absent the UE applies the value as specified in 9.1.1.7.

Conditional Presence	Explanation
MTCH-Mapping	The field is mandatory present if the number of actual transmitted SSBs determined according to *ssb-PositionsInBurst* in SIB1 is more than 1, and *searchspaceMTCH* is not set to zero (including the case where *searchSpaceMTCH* is absent and *searchSpaceMCCH* is not set to zero). Otherwise, it is absent, Need R.

– *MBS-SessionInfoListMulticast*

The IE *MBS-SessionInfoListMulticast* provides a list of MBS multicast sessions transmitted via multicast MRB for RRC_INACTIVE UEs and, for each MBS multicast session, the associated G-RNTI and scheduling information.

MBS-SessionInfoListMulticast information element

```
-- ASN1START
-- TAG-MBS-SESSIONINFOLISTMULTICAST-START

```

***MBS-SessionInfoListMulticast* field descriptions**
g-RNTI G-RNTI used to scramble the scheduling and transmission of multicast MTCH.
mbs-SessionId Indicates an identifier of the MBS session to be received by the UE in RRC_INACTIVE.
mrb-ListMulticast A list of multicast MRBs to which the associated MBS multicast session is mapped to.
mtch-NeighbourCell Indicates neighbour cells which provide this service on MTCH for RRC_INACTIVE. The first bit is set to 1 if the service is provided on MTCH in the first cell in *mbs-NeighbourCellList*, otherwise it is set to 0. The second bit is set to 1 if the service is provided on MTCH in the second cell in *mbs-NeighbourCellList*, and so on. If the service is not available in any neighbouring cell and *mbs-NeighbourCellList* is signalled, the network sets all bits in this field to 0. The field is absent when *mbs-NeighbourCellList* is absent or an empty *mbs-NeighbourCellList* is signalled. If this field is absent when *mbs-NeighbourCellList* is absent or a non-empty *mbs-NeighbourCellList* is signalled, the related service may or may not be available in any neighbouring cell, i.e. the UE cannot determine the presence or absence of an MBS service in neighbouring cells based on the absence of this field. If this field is absent and an empty *mbs-NeighbourCellList* is signalled, then the UE shall assume that MBS multicast services signalled in *mbs-SessionInfoListMulticast* in the *MBSMulticastConfiguration* message are not provided in any neighbour cell.
mtch-SchedulingInfo Indicates the index of DRX configuration entry in *drx-ConfigPTM-List* that is used for scheduling the MTCH. The value 0 corresponds to the first entry in *drx-ConfigPTM-List*, the value 1 corresponds to the second entry in *drx-ConfigPTM-List* and so on. In case *mtch-schedulingInfo* is absent for a G-RNTI (i.e. no PTM DRX), the UE shall monitor for PDCCH scrambled with G-RNTI in any slot according to the search space configured for MTCH.
mtch-SSB-MappingWindowIndex Indicates the index of *MTCH-SSB-MappingWindowCycleOffset* configuration entry in *MTCH-SSB-MappingWindowList*. The value 0 corresponds to the first entry in *MTCH-SSB-MappingWindowList*, the value 1 corresponds to the second entry in *MTCH-SSB-MappingWindowList* and so on. This field is set to the same value for all MBS sessions mapped to the same G-RNTI.
pdcp-SN-SizeDL Indicates PDCP sequence number size of 12 or 18 bits, as specified in TS 38.323 [5].
pdsch-ConfigIndex Indicates the index of PDSCH configuration entry in *pdsch-ConfigList* for MTCH. Value 0 corresponds to the first entry in *pdsch-ConfigList*, the value 1 corresponds to the second entry in *pdsch-ConfigList* and so on. When the field is absent the UE applies the first entry in *pdsch-ConfigList* for MTCH.
pdcp-SyncIndicator Indicates the PDCP COUNT of the corresponding multicast session is synchronized in the RNA, i.e. the cells in the RNA follow a common QoS flow to MRB mapping rule and at the same time PDCP COUNT is set according to the MBS QoS Flow SN.
sn-FieldLength Indicates RLC SN field size of 6 or12 bits, as specified in TS 38.322 [4].
stopMonitoringRNTI Indicates the UE to stop monitoring the G-RNTI for the corresponding multicast session.
t-Reassembly Timer for reassembly in TS 38.322 [4], in milliseconds. Value ms0 means 0 ms, value ms5 means 5 ms and so on.
t-Reordering Value in ms of *t-Reordering* specified in TS 38.323 [5]. Value ms1 corresponds to 1 ms, value ms10 corresponds to 10 ms, and so on.
thresholdIndex Indicates the index of *thresholdMBS* entry in *thresholdMBS-List* that is used for RRC connection resume for a UE receiving the corresponding multicast session in RRC_INACTIVE. Value 0 corresponds to the first entry in *thresholdMBS-List*, the value 1 corresponds to the second entry in *thresholdMBS-List* and so on.

Conditional Presence	Explanation
G-RNTI	The field is optionally present, Need R, if *g-RNTI* is included. Otherwise, it is absent.
MTCH-Mapping	The field is mandatory present if the number of actual transmitted SSBs determined according to *ssb-PositionsInBurst* in SIB1 is more than 1, and *searchSpaceMulticastMTCH* is not set to zero (including the case where *searchSpaceMulticastMTCH* is absent and *searchSpaceMulticastMCCH* is not set to zero). Otherwise, it is absent, Need R.
RRCRelease	The field is optionally present, Need R, if *mbs-SessionInfoListMulticast* is included in *RRCRelease* message. Otherwise, it is absent.

– *MTCH-SSB-MappingWindowList*

The IE *MTCH-SSB-MappingWindowList* is used to configure MTCH PDCCH ocassions to SSB mapping window related periodic and offset parameters.

MTCH-SSB-MappingWindowList information element

```
-- ASN1START
-- TAG-MTCH-SSB-MAPPINGWINDOWLIST-START

MTCH-SSB-MappingWindowList-r17 ::= SEQUENCE (SIZE (1..maxNrofMTCH-SSB-MappingWindow-r17)) OF MTCH-SSB-MappingWindowCycleOffset-r17

MTCH-SSB-MappingWindowCycleOffset-r17 ::= CHOICE {
    ms10                                INTEGER(0..9),
    ms20                                INTEGER(0..19),
    ms32                                INTEGER(0..31),
    ms64                                INTEGER(0..63),
    ms128                               INTEGER(0..127),
    ms256                               INTEGER(0..255)
}

-- TAG-MTCH-SSB-MAPPINGWINDOWLIST-STOP
-- ASN1STOP
```

MTCH-SSB-MappingWindowList field descriptions
MTCH-SSB-MappingWindowCycleOffset
Indicates the *cycle* and *offset* for MTCH PDCCH ocassions to SSB mapping. Values in unit of ms. *ms10* corresponds to cycle of 10 ms with corresponding offset between 0 and 9 ms, value *ms20* corresponds to cycle of 20 ms with corresponding offset between 0 and 19 ms, and so on. The mapping window starts at a subframe in a SFN where [(SFN number × 10) + subframe number] modulo (*cycle*) = *offset.* PDCCH monitoring occasions for MTCH in a mapping window which are not overlapping with UL symbols (determined according to *tdd-UL-DL-ConfigurationCommon*) are sequentially numbered starting from 1 in the maping window. The $[x \times N+K]^{th}$ PDCCH monitoring occasion for MTCH in this mapping window corresponds to the K^{th} transmitted SSB, where x = 0, 1, ...X-1, K = 1, 2, …N, N is the number of actual transmitted SSBs determined according to *ssb-PositionsInBurst* in *SIB1* and X is equal to CEIL(number of PDCCH monitoring occasions in MTCH to SSB mapping transmission window/N). The actual transmitted SSBs are sequentially numbered from one in ascending order of their SSB indexes.

– *PDSCH-ConfigBroadcast*

The IE *PDSCH-ConfigBroadcast* is used to configure parameters for acquiring the PDSCH for MCCH, multicast MCCH and MTCH.

PDSCH-ConfigBroadcast information element

```
-- ASN1START
-- TAG-PDSCH-CONFIGBROADCAST-START

PDSCH-ConfigBroadcast-r17 ::= SEQUENCE {

PDSCH-ConfigBroadcast field descriptions
lte-CRS-ToMatchAround Parameters to determine an LTE CRS pattern that the UE shall rate match around.
pdschConfigList List of PDSCH parameters which can be configured per G-RNTI. Only one entry is allowed to be configured if included in *SIB20* or *SIB24*.
pdsch-TimeDomainAllocationList List of time-domain configurations for timing of DL assignment to DL data. The field *pdsch-TimeDomainAllocationList* applies to DCI format 4_0 (see table 5.1.2.1.1-1 in TS 38.214 [19]). When the field is absent, the UE follows PDSCH time domain resource allocation determination rule as specified in TS 38.214 [19], clause 5.1.2.1.1.
rateMatchPatternToAddModList Resources patterns which the UE should rate match PDSCH around. The UE rate matches around the union of all resources indicated in the rate match patterns (see TS 38.214 [19], clause 5.1.4.1).
mcs-Table Indicates which MCS table the UE shall use for PDSCH. If the field is absent the UE applies the value 64QAM. The field *mcs-Table* applies to DCI format 4_0 with CRC scrambled by MCCH-RNTI/G-RNTI for MBS broadcast or by Multicast MCCH-RNTI for MBS multicast in RRC_INACTIVE, and applies to DCI format 4_1 with CRC scrambled by G-RNTI for MBS multicast in RRC_INACTIVE (see TS 38.214 [19], clause 5.1.3.1).
xOverhead Accounts for an overhead from CSI-RS, CORESET, etc. If the field is absent, the UE applies value xOh0 (see TS 38.214 [19], clause 5.1.3.2).

***PDSCH-ConfigPTM* field descriptions**
dataScramblingIdentityPDSCH Identifier(s) used to initialize data scrambling (c_init) for PDSCH as specified in TS 38.211 [16], clause 7.3.1.1. When the field is absent the UE applies the value physCellId configured for this serving cell.
dmrs-ScramblingID0 DL DMRS scrambling initialization (see TS 38.211 [16], clause 7.4.1.1.1). When the field is absent the UE applies the value *physCellId* configured for this serving cell.
pdsch-AggregationFactor Number of repetitions for dynamic scheduling of MBS broadcast data for MTCH PDSCH (see TS 38.214 [19], clause 5.1.2.1). When the field is absent the UE applies the value 1.

– *TMGI*

The IE *TMGI* is used to identify the MBS session.

TMGI information element

```
-- ASN1START
-- TAG-TMGI-START

TMGI-r17 ::=                SEQUENCE {
    plmn-Id-r17                CHOICE {
        plmn-Index                INTEGER (1..maxPLMN),
        explicitValue              PLMN-Identity
    },
    serviceId-r17              OCTET STRING (SIZE (3))
}

-- TAG-TMGI-STOP
-- ASN1STOP
```

***TMGI* field descriptions**
plmn-Index PLMN index or NPN index according to the *plmn-IdentityInfoList* and *npn-IdentityInfoList* fields included in *SIB1*. If this field is included in the *MRB-ToAddMod-r17*, the UE translates the *plmn-Index* into the PLMN Identity or SNPN Identity based on the configuration in *SIB1* (which is the *SIB1* of the target cell in case of handover). The *explicitValue* is not used for MBS service(s) of an SNPN.
serviceId Uniquely identifies the identity of an MBS service within a PLMN. The field contains octet 3- 5 of the IE Temporary Mobile Group Identity (TMGI) as defined in TS 24.008 [38]. The first octet contains the third octet of the TMGI, the second octet contains the fourth octet of the TMGI and so on.

6.4 RRC multiplicity and type constraint values

6.5 Short Message

Short Messages can be transmitted on PDCCH using P-RNTI with or without associated *Paging* message using Short Message field in DCI format 1_0 (see TS 38.212 [17], clause 7.3.1.2.1).

Table 6.5-1 defines Short Messages. Bit 1 is the most significant bit.

Table 6.5-1: Short Messages

Bit	Short Message
1	***systemInfoModification*** If set to 1: indication of a BCCH modification other than *SIB6*, *SIB7*, *SIB8* and *posSIBs*.
2	***etwsAndCmasIndication*** If set to 1: indication of an ETWS primary notification and/or an ETWS secondary notification and/or a CMAS notification.
3	***stopPagingMonitoring*** This bit can be used for only operation with shared spectrum channel access and if *nrofPDCCH-MonitoringOccasionPerSSB-InPO* is present. If set to 1: indication that the UE may stop monitoring PDCCH occasion(s) for paging in this Paging Occasion as specified in TS 38.304 [20], clause 7.1.
4	***systemInfoModification-eDRX*** If set to 1: indication of a BCCH modification other than *SIB6*, *SIB7*, *SIB8* and *posSIB*s. This indication applies only to UEs using IDLE eDRX cycle longer than the BCCH modification period.
5	***adaptiveRAResources*** If set to 1: Indication of activation for adaptive random access resources.
6 – 8	Not used in this release of the specification, and shall be ignored by UE if received.

}

-- TAG-MASTERINFORMATIONBLOCKSIDELINK-STOP
-- ASN1STOP
```

***MasterInformationBlockSidelink* field descriptions**
directFrameNumber Indicates the frame number in which S-SSB transmitted.
inCoverage Value true indicates that the UE transmitting the *MasterInformationBlockSidelink* is in network coverage, or UE selects GNSS timing as the synchronization reference source.
slotIndex Indicates the slot index in which S-SSB transmitted.

– *MeasurementReportSidelink*

The *MeasurementReportSidelink* message is used for the indication of measurement results of NR sidelink.

Signalling radio bearer: SL-SRB3

***MeasurementReportSidelink* field descriptions**
sl-MeasId Identifies the sidelink measurement identity for which the reporting is being performed.
sl-MeasResult Measured RSRP results of a unicast destination.
sl-RSRP-DedicatedSL-PRS-RP Measured SL PRS-based filtered RSRP.
sl-RelayIndicationMP Indicate the reported L2 U2N Relay UE supports RRC connection establishment/resume for MP operation triggered by receiving *RemoteUEInformationSidelink* containing the *connectionForMP* as specified in 5.3.3.1a and 5.3.13.1a in Rel-18.
sl-RelayUE-HopType ***I***ndicates the hop type as single-hop if the relay service offered by the concerned L2 U2N Relay UE is single hop relay service or to multi-hop if the relay service offered by the concerned L2 U2N Relay UE is multi hop relay service.

– *NotificationMessageSidelink*

The *NotificationMessageSidelink* message is used to send notification message from U2N Relay UE to the connected U2N Remote UE or from U2U Relay UE to the connected U2U Remote UE.

Signalling radio bearer: SL-SRB3

RLC-SAP: AM

***RemoteUEInformationSidelink-IEs* field descriptions**
connectionForMP Indicates the connected L2 U2N Relay UE by the L2 U2N Remote UE that the access is for MP.
sl-DestinationIdentityRemoteUE Indicates the peer L2 U2U Remote UE upon end-to-end PC5 connection failure or release.
sl-PagingCycleRemoteUE Indicates the L2 U2N Remote UE's UE specific DRX cycle as the minimum value of the one provided by upper layers (if configured) and the one provided by RRC layer (if configured). Value rf32 corresponds to 32 radio frames, value rf64 corresponds to 64 radio frames and so on.
sl-PagingIdentityRemoteUE Indicates the L2 U2N Remote UE's paging UE ID.
sl-PagingInfo-RemoteUE Indicates the paging information used by L2 U2N Relay UE in case of single hop or L2 Last U2N Relay UE to perform the connected L2 U2N Remote UE's or the child UE's paging monitoring.
SL-PagingInfo-RemoteUE-List Contains a list of paging information for the downstream remote UEs
sl-RequestedPosSIB-List Contains a list of requested PosSIBs.
sl-RequestedSIB-List Contains a list of requested SIBs.
sl-SFN-DFN-OffsetRequested If present, this field indicates that the L2 U2N Remote UE requests the L2 U2N Relay UE to provide the SFN-DFN offset in a subsequent *RRCReconfigurationSidelink* message.
SL-SIB-ReqInfo Indicates the requested SIB type. Values sibNotReq11, sibNotReq10, …, sibNotReq1 shall be ignored by L2 U2N relay UE (i.e., no SIB requested).

Conditional presence	Explanation
GNSS-ID-SBAS	The field is mandatory present if *gnss-id* is set to *sbas*. It is absent otherwise.

– *RRCReconfigurationSidelink*

The *RRCReconfigurationSidelink* message is the command to AS configuration of the PC5 RRC connection. It is only applied to unicast of NR sidelink communication.

Signalling radio bearer: SL-SRB3

RLC-SAP: AM

Logical channel: SCCH

Direction: UE to UE

RRCReconfigurationSidelink message

***RRCReconfigurationSidelink* field descriptions**
sl-AbsoluteFrequencyPointA Absolute frequency of the reference resource block (Common RB 0). Its lowest subcarrier is also known as Point A.
sl-CarrierToAddModList Indicate the carrier(s) to be added/modified for transmission by UE transmitting *RRCReconfigurationSidelink* message, corresponding to the frequency in *sl-FreqInfoListSizeExt* broadcast in *SIB12* or corresponding to the frequency in *sl-PreconfigFreqInfoListSizeExt* in *SL-PreconfigurationNR*.
sl-CarrierToReleaseList Indicate the carrier(s) to be released for the transmission by UE transmitting *RRCReconfigurationSidelink* message.
sl-CSI-RS-FreqAllocation Indicates the frequency domain position for sidelink CSI-RS.
sl-CSI-RS-FirstSymbol Indicates the position of first symbol of sidelink CSI-RS.
sl-DRX-ConfigUC-PC5 Indicates the NR sidelink DRX configuration for unicast communication, as specified in TS 38.321 [3]
sl-LatencyBoundCSI-Report Indicates the latency bound of SL CSI report from the associated SL CSI triggering in terms of number of slots.
sl-LatencyBoundIUC-Report Indicates the latency bound of SL Inter-UE coordination report from the associated SL Inter-UE coordination explicit request triggering in terms of number of slots.
sl-LocalID-PairList Indicate a list of local ID pair which is assigned for one end-to-end PC5 connection by the L2 U2U Relay UE.
sl-LogicalChannelIdentity Indicates the identity of the sidelink logical channel, as specified in TS 38.321 [3], clause 6.2.4. If the *sl-LogicalChannelIdentity-v1800* is present, the UE shall ignore the *sl-LogicalChannelIndentity-r16* field.
sl-MappedQoS-FlowsToAddList Indicate the QoS flows to be mapped to the configured sidelink DRB. Each entry is indicated by the *SL-PQFI*, which is used between UEs, as defined in TS 23.287 [55].
sl-MappedQoS-FlowsToReleaseList Indicate the QoS flows to be released from the configured sidelink DRB. Each entry is indicated by the *SL-PQFI*, which is used between UEs, as defined in TS 23.287 [55].
sl-MeasConfig Indicates the sidelink measurement configuration for the unicast destination.
sl-OffsetToCarrier Offset in frequency domain between Point A (lowest subcarrier of common RB 0) and the lowest usable subcarrier on this carrier in number of PRBs (using the subcarrierSpacing defined for this carrier). The maximum value corresponds to 275*8-1. See TS 38.211 [16], clause 4.4.2.
sl-OutOfOrderDelivery Indicates whether or not outOfOrderDelivery specified in TS 38.323 [5] is configured. This field should be either always present or always absent, after the sidelink radio bearer is established.
sl-PDCP-SN-Size Indicates the PDCP SN size of the configured sidelink DRB.
sl-Resetconfig Indicates that the full configuration should be applicable for the *RRCReconfigurationSidelink* message.
sl-RLC-BearerToAddModList Indicate the additional Sidelink RLC bearer to be added / modified for the configured sidelink SRB/DRB.
sl-RLC-BearerToReleaseList Indicate the additional Sidelink RLC bearer to be released for the configured sidelink SRB/DRB.

sl-SDAP-Header Indicates whether or not a SDAP header is present on this sidelink DRB.
sl-SFN-DFN-Offset Indicates the SFN-DFN offset to be used for determining the SFN timeline based on the DFN timeline.
sl-SRB-IdentityWithDuplication Indicate the sidelink SRB for which duplication is configured.
slrb-PC5-ConfigIndex Indicates the identity of the configuration of a sidelink DRB. In case of L2 U2U relay, only value 4-31 can be signaled for an end-to-end sidelink DRB, and all other values are reserved.

SL-SRAP-ConfigPC5 **field descriptions**
sl-RemoteUE-LocalIdentity Indicates the local UE ID of the L2 U2U Remote UE used in SRAP as specified in TS 38.351 [66].
sl-RemoteUE-L2Identity Indicates the Source L2 ID of the L2 U2U Remote UE as specified in TS 23.304 [65].
sl-PeerRemoteUE-LocalIdentity Indicates the local UE ID of the peer L2 U2U Remote UE used in SRAP as specified in TS 38.351 [66].
sl-PeerRemoteUE-L2Identity Indicates the destination L2 ID identifying the peer L2 U2U Remote UE as specified in TS 23.304 [65].

– *RRCReconfigurationCompleteSidelink*

The *RRCReconfigurationCompleteSidelink* message is used to confirm the successful completion of a PC5 RRC AS reconfiguration. It is only applied to unicast of NR sidelink communication.

Signalling radio bearer: SL-SRB3

***UEInformationRequestSidelink* field descriptions**
sl-E2E-QoS-InfoListPC5 Indicates the per-QoS flow QoS info for a list of end-to-end PC5 connections with each connection indicated by the destination L2 ID of the peer L2 U2U Remote UE. In addition, the end-to-end SLRB index is included to indicate the mapping from the QoS flow to the SLRB.

***SL-E2E-QoS-InfoPC5* field descriptions**
sl-DestinationIdentityRemoteUE Indicates the destination L2 ID of the peer L2 U2U Remote UE for an end-to-end PC5 connection.
sl-E2E-SLRB-Index Indicates the index of an end-to-end SLRB.
sl-QoS-InfoList List of QoS profile of the sidelink QoS flow for an end-to-end PC5 connection, with each QoS flow indicated by *sl-QoS-FlowIdentity* which is unique for different end-to-end PC5 connection in the scope of UE, and uniquely identifies one sidelink QoS flow between the L2 U2U Remote UE and the L2 U2U Relay UE.

– *UEInformationResponseSidelink*

The *UEInformationResponseSidelink* message is used to deliver UE information in sidelink, e.g. the split QoS information for L2 U2U Relay operation.

Signalling radio bearer: SL-SRB3

7 Variables and constants

7.1 Timers

7.1.1 Timers (Informative)

Timer	Start	Stop	At expiry
T300	Upon transmission of *RRCSetupRequest.*	Upon reception of *RRCSetup* or *RRCReject* message, cell re-selection, relay (re)selection or cell selection by a L2 U2N Remote UE, and upon abortion of connection establishment by upper layers.	Perform the actions as specified in 5.3.3.7.
T301	Upon transmission of *RRCReestabilshmentRequest*	Upon reception of *RRCReestablishment* or *RRCSetup* message as well as when the selected cell becomes unsuitable or the (re)selected L2 U2N Relay UE becomes unsuitable, upon reception of *NotificationMessageSidelink* indicating *relayUE-HO* or *relayUE-CellReselection*.	Go to RRC_IDLE
T302	Upon reception of *RRCReject* while performing RRC connection establishment or resume, upon reception of *RRCRelease* with *waitTime*.	Upon entering RRC_CONNECTED or RRC_IDLE, upon cell re-selection, upon cell change due to relay (re)selection or cell selection by a L2 U2N Remote UE, and upon reception of *RRCReject* message.	Inform upper layers about barring alleviation as specified in 5.3.14.4

Timer	Start	Stop	At expiry
T304	Upon reception of *RRCReconfiguration* message including *reconfigurationWithSync* for the MCG which does not include *sl-PathSwitchConfig*, or upon reception of *RRCReconfiguration* message including *reconfigurationWithSync* for the SCG not indicated as deactivated in the NR or E-UTRA message containing the *RRCReconfiguration* message or upon conditional reconfiguration execution i.e. when applying a stored *RRCReconfiguration* message including *reconfigurationWithSync*. Also, for the MCG and SCG upon an indication from lower layer that an LTM cell switch procedure is triggered and, for the MCG, upon performing an LTM cell switch procedure following cell selection performed while timer T311 is running.	Upon successful completion of random access on the corresponding SpCell. Upon receiving an indication from lower layers of successful completion of Rach-less handover, or upon receiving an indication from lower layers of successful completion of an LTM RACH-less cell switch. For T304 of SCG, upon SCG release.	For T304 of MCG, in case of the handover from NR or intra-NR handover, or path switch from a L2 U2N Relay UE to a NR cell, or an LTM cell switch procedure, initiate the RRC re-establishment procedure; In case of handover to NR, perform the actions defined in the specifications applicable for the source RAT. If any DAPS bearer is configured and if there is no RLF in source PCell, initiate the failure information procedure. For T304 of SCG, inform network about the reconfiguration with sync failure by initiating the SCG failure information procedure as specified in 5.7.3.

Timer	Start	Stop	At expiry
T310	Upon detecting physical layer problems for the SpCell i.e. upon receiving N310 consecutive out-of-sync indications from lower layers.	Upon receiving N311 consecutive in-sync indications from lower layers for the SpCell, upon receiving RRCReconfiguration with *reconfigurationWithSync* for that cell group, upon reception of *MobilityFromNRCommand*, upon the reconfiguration of *rlf-TimersAndConstant,* upon initiating the connection re-establishment procedure, upon conditional reconfiguration execution i.e. when applying a stored RRCReconfiguration message including *reconfigurationWithSync* for that cell group, upon an indication from lower layers that an LTM cell switch procedure is triggered, and upon initiating the MCG failure information procedure. Upon SCG release, if the T310 is kept in SCG.	If the T310 is kept in MCG: If AS security is not activated: go to RRC_IDLE else: initiate the MCG failure information procedure as specified in 5.7.3b or the connection re-establishment procedure as specified in 5.3.7 or the procedure as specified in 5.3.10.3 if any DAPS bearer is configured. If the T310 is kept in SCG, Inform E-UTRAN/NR about the SCG radio link failure by initiating the SCG failure information procedure as specified in 5.7.3.
T311	Upon initiating the RRC connection re-establishment procedure	Upon selection of a suitable NR cell, or upon selection of a suitable L2 U2N Relay UE, or a cell using another RAT.	Enter RRC_IDLE

Timer	Start	Stop	At expiry
T312	If T312 is configured in MCG: Upon triggering a measurement report for a measurement identity for which T312 has been configured and *useT312* has been set to true, while T310 in PCell is running. If T312 is configured in SCG and *useT312* has been set to true: Upon triggering a measurement report for a measurement identity for which T312 has been configured, while T310 in PSCell is running.	Upon receiving N311 consecutive in-sync indications from lower layers for the SpCell, receiving *RRCReconfiguration* with *reconfigurationWithSync* for that cell group, upon reception of *MobilityFromNRCommand*, upon initiating the connection re-establishment procedure, upon the reconfiguration of *rlf-TimersAndConstant*, upon initiating the MCG failure information procedure, upon conditional reconfiguration execution i.e. when applying a stored RRCReconfiguration message including *reconfigurationWithSync* for that cell group, upon an indication from lower layers that an LTM cell switch procedure is triggered, and upon the expiry of T310 in corresponding SpCell. Upon SCG release, if the T312 is kept in SCG	If the T312 is kept in MCG, initiate the MCG failure information procedure as specified in 5.7.3b or the connection re-establishment procedure. If the T312 is kept in SCG, Inform E-UTRAN/NR about the SCG radio link failure by initiating the SCG failure information procedure.as specified in 5.7.3.
T316	Upon transmission of the *MCGFailureInformation* message	Upon receiving *RRCRelease*, *RRCReconfiguration* with *reconfigurationwithSync* for the PCell, *MobilityFromNRCommand,* or upon initiating the re-establishment procedure	Perform the actions as specified in 5.7.3b.5.
T319	Upon transmission of *RRCResumeRequest* or *RRCResumeRequest1 when the resume procedure is not initiated for SDT*.	Upon reception of *RRCResume, RRCSetup, RRCRelease, RRCRelease* with *suspendConfig* or *RRCReject* message, upon cell re-selection or upon relay (re)selection.	Perform the actions as specified in 5.3.13.5.

Timer	Start	Stop	At expiry
T319a	Upon transmission of *RRCResumeRequest* or *RRCResumeRequest1* when the resume procedure is initiated for SDT.	Upon reception of *RRCResume, RRCSetup, RRCRelease, RRCReject* message or upon failure to resume RRC connection for SDT as specified in 5.3.13.5 or upon cell reselection.	Perform the actions as specified in 5.3.13.5.
T320	Upon reception of *t320* or upon cell (re)selection to NR from another RAT with validity time configured for dedicated priorities (in which case the remaining validity time is applied).	Upon entering RRC_CONNECTED, upon reception of *RRCRelease*, when PLMN selection or SNPN selection is performed on request by NAS, when the UE enters RRC_IDLE from RRC_INACTIVE, or upon cell (re)selection to another RAT (in which case the timer is carried on to the other RAT).	Discard the cell reselection priority information provided by dedicated signalling.
T321	Upon receiving *measConfig* including a *reportConfig* with the *reportType* set to *reportCGI*	Upon acquiring the information needed to set all fields of *cgi-info*, upon receiving *measConfig* that includes removal of the *reportConfig* with the *reportType* set to *reportCGI* and upon detecting that a cell is not broadcasting SIB1.	Initiate the measurement reporting procedure, stop performing the related measurements.
T322	Upon receiving *measConfig* including *reportConfigNR* with the *reportType* set to *reportSFTD* and *drx-SFTD-NeighMeas* is set to *true*.	Upon acquiring the SFTD measurement results, upon receiving *measConfig* that includes removal of the *reportConfig* with the *reportType* set to *reportSFTD*.	Initiate the measurement reporting procedure, stop performing the related measurements.
T325	Upon reception of *RRCRelease* message with *deprioritisationTimer*.	When PLMN selection or SNPN selection is performed on request by NAS according to TS 38.304 [20].	Stop deprioritisation of all frequencies or NR signalled by *RRCRelease* and discard the stored deprioritisation request(s).

Timer	Start	Stop	At expiry
T330	Upon receiving *LoggedMeasurementConfiguration* message	Upon log volume exceeding the suitable UE memory, upon initiating the release of *LoggedMeasurementConfiguration* procedure	Perform the actions specified in 5.5a.1.4
T331	Upon receiving *RRCRelease* message with *measIdleDuration*	Upon receiving *RRCSetup, RRCResume*, *RRCRelease* with idle/inactive measurement configuration, upon cell selection/reselection to a cell that does not belong to the *validityArea* (if configured), or upon cell re-selection to another RAT.	Perform the actions as specified in 5.7.8.3.
T342	Upon transmitting *UEAssistanceInformation* message with *DelayBudgetReport*.	Upon releasing *delayBudgetReportingConfig* during the connection re-establishment/resume procedures, and upon receiving *delayBudgetReportingConfig* set to *release.*	No action.
T345	Upon transmitting *UEAssistanceInformation* message with *overheatingAssistance*	Upon releasing *overheatingAssistanceConfig* during the connection re-establishment procedure, upon initiating the connection resumption procedure, and upon receiving *overheatingAssistanceConfig* set to *release.*	No action.
T346a (The UE maintains one instance of this timer per cell group)	Upon transmitting *UEAssistanceInformation* message with *drx-Preference*.	Upon releasing *drx-PreferenceConfig* during the connection re-establishment/resume procedures, upon receiving *drx-PreferenceConfig* set to *release*, or upon performing MR-DC release.	No action.

Timer	Start	Stop	At expiry
T346b (The UE maintains one instance of this timer per cell group)	Upon transmitting *UEAssistanceInformation* message with *maxBW-Preference*.	Upon releasing *maxBW-PreferenceConfig* during the connection re-establishment/resume procedures, upon receiving *maxBW-PreferenceConfig* set to *release*, or upon performing MR-DC release.	No action.
T346c (The UE maintains one instance of this timer per cell group)	Upon transmitting *UEAssistanceInformation* message with *maxCC-Preference*.	Upon releasing *maxCC-PreferenceConfig* during the connection re-establishment/resume procedures, upon receiving *maxCC-PreferenceConfig* set to *release*, or upon performing MR-DC release.	No action.
T346d (The UE maintains one instance of this timer per cell group)	Upon transmitting *UEAssistanceInformation* message with *maxMIMO-LayerPreference*.	Upon releasing *maxMIMO-LayerPreferenceConfig* during the connection re-establishment/resume procedures, upon receiving *maxMIMO-LayerPreferenceConfig* set to *release*, or upon performing MR-DC release.	No action.
T346e (The UE maintains one instance of this timer per cell group)	Upon transmitting *UEAssistanceInformation* message with *minSchedulingOffsetPreference*.	Upon releasing *minSchedulingOffsetPreferenceConfig* during the connection re-establishment/resume procedures, upon receiving *minSchedulingOffsetPreferenceConfig* set to *release*, or upon performing MR-DC release.	No action.
T346f	Upon transmitting *UEAssistanceInformation* message with *releasePreference*.	Upon releasing *releasePreferenceConfig* during the connection re-establishment/resume procedures, or upon receiving *releasePreferenceConfig* set to *release.*	No action.

Timer	Start	Stop	At expiry
T346g	Upon transmitting *UEAssistanceInformation* message with *musim-PreferredRRC-State*.	Upon receiving *RRCRelease*, or upon receiving *musim-LeaveAssistanceConfig* set to *release*.	Perform the actions as specified in 5.3.8.6.
T346h	Upon transmitting *UEAssistanceInformation* message with *musim-GapPreferenceList* and/or *musim-GapPriorityPreferenceList* and/or *musim-GapKeepPreference* Information.	Upon releasing *musim-GapAssistanceConfig* during the connection re-establishment/resume procedures, or upon receiving *musim-GapAssistanceConfig* set to *release*.	No action.
T346i	Upon transmitting *UEAssistanceInformation* message with *scg-DeactivationPreference*	Upon releasing *scg-DeactivationPreferenceConfig* during RRC connection re-establishment/resume or upon receiving *scg-DeactivationPreferenceConfig* set to *release*.	No action.
T346j (The UE maintains one instance of this timer per cell group)	Upon transmitting *UEAssistanceInformation* message with *rlm-RelaxationReportingConfig*.	Upon releasing *rlm-RelaxationReportingConfig* during the connection re-establishment/resume procedures, upon receiving *rlm-RelaxationReportingConfig* set to *release*, or upon performing MR-DC release.	No action.
T346k (The UE maintains one instance of this timer per cell group)	Upon transmitting *UEAssistanceInformation* message with *bfd-RelaxationReportingConfig*.	Upon releasing *bfd-RelaxationReportingConfig* during the connection re-establishment/resume procedures, upon receiving *bfd-RelaxationReportingConfig* set to *release*, or upon performing MR-DC release.	No action.

Timer	Start	Stop	At expiry
T346l (The UE maintains one instance of this timer per QoS flow)	Upon transmitting *UEAssistanceInformation* message with *ul-TrafficInfo* for the concerned QoS flow.	Upon releasing *ul-TrafficInfoReportingConfig* during the connection re-establishment/resume procedures, or upon receiving *ul-TrafficInfoReportingConfig* set to *release.*	No action.
T346m	Upon transmitting *UEAssistanceInformation* message with *multiRx-PreferenceFR2*.	Upon releasing *multiRx-PreferenceReportingConfigFR2* during the connection re-establishment/resume procedures, upon receiving *multiRx-PreferenceReportingConfigFR2* set to release.	No action.
T346n	Upon transmission of MUSIM temporary restriction of *musim-CapRestriction* for affected bands or combination of bands and/or avoided band(s) or combination of bands.	Upon releasing *musim-CapabilityRestrictionConfig* during the connection re-establishment/resume procedures, or upon receiving *musim-CapabilityRestrictionConfig* set to *release.*	No action.
T346o	Upon transmission of *UEAssistanceInformation* message with *gapOccasionCancelRatio* .	Upon releasing *gapOccasionCancelRatioReportConfig* during the connection re-establishment/resume procedure or upon receiving *gapOccasionCancelRatioReportConfig* set to release.	No action.
T346p (The UE maintains one instance of this timer per cell group)	Upon transmitting *UEAssistanceInformation* message with *lpwus-OffsetPreference*.	Upon releasing *lpwus-OffsetPreferenceConfig* during the connection re-establishment/resume procedures, upon receiving *lpwus-OffsetPreferenceConfig* set to *release*, or upon performing MR-DC release.	No action.

Timer	Start	Stop	At expiry
T346q	Upon transmitting *UEAssistanceInformation* message with *fbs-Preference*.	Upon releasing *fbs-PreferenceReportingConfig* during the connection re-establishment/resume procedures, upon receiving *fbs-PreferenceReportingConfig* set to *release*.	No action.
T348	Upon transmission of MUSIM temporary restriction of *musim-CapRestriction* for serving cell(s) with capabilities restricted, release of SCell or PSCell or release of SCG.	Upon reception of *RRCReconfiguration* message that does not exceed UE temporary capability restriction indicated via *musim-CapRestriction*.	UE may apply the temporary UE capability restriction in accordance with the one indicated in the last transmission of the *UEAssistanceInformation* message including *musim-CapRestriction*. UE may apply the temporary capability restriction that SCG is not supported if *ServCellIndex* of PSCell was included in indicated *MUSIM-CellToRelease-r18*.
T350	Upon transmitting *DedicatedSIBRequest* message with *requestedSIB-List* and/or *requestedPosSIB-List* or *requestedPeriodicAD-PosSIB-List*.	Upon acquiring the requested SIB(s) or posSIB(s), upon releasing *onDemandSIB-Request* during the connection re-establishment procedures, upon receiving *onDemandSIB-Request* set to release, upon reception of *RRCRelease* or upon successful change of PCell while in RRC_CONNECTED.	No action
T380	Upon reception of t380 in *RRCRelease*.	Upon reception of *RRCResume*, *RRCSetup* or *RRCRelease*.	Perform the actions as specified in 5.3.13.
T390	When access attempt is barred at access barring check for an Access Category. The UE maintains one instance of this timer per Access Category.	Upon cell (re)selection, upon relay (re)selection, upon entering RRC_CONNECTED, upon reception of *RRCReconfiguration* including *reconfigurationWithSync*, upon change of PCell while in RRC_CONNECTED, upon reception of *MobilityFromNRCommand*, or upon reception of *RRCRelease*.	Perform the actions as specified in 5.3.14.4.

Timer	Start	Stop	At expiry
T400	Upon transmission of RRCReconfigurationSidelink	Upon reception of RRCReconfigurationFailureSidelink or RRCReconfigurationCompleteSidelink	Perform the Sidelink radio link failure related actions as specified in 5.8.9.3.
T420	Upon reception of the *RRCReconfiguration* message including *sl-PathSwitchConfig* where *sl-IndirectPathMaintain* is not included in *reconfigurationWithSync*	Upon successfully sending *RRCReconfigurationComplete* message (i.e., PC5 RLC acknowledgement is received from target L2 U2N Relay UE)	Perform the RRC re-establishment procedure as specified in 5.3.7.
T421	Upon reception of the *RRCReconfiguration* message including *sl-IndirectPathAddChange* where *sl-IndirectPathMaintain* is not included in *reconfigurationWithSync*	Upon successfully sending *RRCReconfigurationComplete* message (i.e., PC5 RLC acknowledgement is received from target L2 U2N Relay UE) if split SRB1 with duplication is configured, or upon reception of *RRCReconfigurationCompleteSidelink* if split SRB1 with duplication is not configured, or upon initiation of indirect path failure information procedure.	Perform the Failure Information Reporting as specified in 5.7.3c.
T430	Start or restart from the subframe indicated by *epochTime* upon reception of *SIB19*, or upon reception of *RRCReconfiguration* message for the target cell including *reconfigurationWithSync*, or upon conditional reconfiguration execution i.e. when applying a stored *RRCReconfiguration* message for the target cell including *reconfigurationWithSync,* or upon satellite switch with resynchronization.	Stop T430, if it is running, for the source cell upon reception of *RRCReconfiguration* message including *reconfigurationWithSync*, or upon conditional reconfiguration execution i.e. when applying a stored *RRCReconfiguration* message including *reconfigurationWithSync,* or upon satellite switch with resynchronization.	Perform the actions as specified in 5.2.2.6.

7.1.2 Timer handling

When the UE applies zero value for a timer, the timer shall be started and immediately expire unless explicitly stated otherwise.

7.2 Counters

Counter	Reset	Incremented	When reaching max value
N310	Upon reception of "in-sync" indication from lower layers; upon receiving *RRCReconfiguration* with *reconfigurationWithSync* for that cell group; upon initiating the connection re-establishment procedure.	Upon reception of "out-of-sync" from lower layer while the timer T310 is stopped.	Start timer T310
N311	Upon reception of "out-of-sync" indication from lower layers; upon receiving *RRCReconfiguration* with *reconfigurationWithSync* for that cell group; upon initiating the connection re-establishment procedure.	Upon reception of the "in-sync" from lower layer while the timer T310 is running.	Stop the timer T310.

7.3 Constants

Constant	Usage
N310	Maximum number of consecutive "out-of-sync" indications for the SpCell received from lower layers
N311	Maximum number of consecutive "in-sync" indications for the SpCell received from lower layers

7.4 UE variables

NOTE: To facilitate the specification of the UE behavioural requirements, UE variables are represented using ASN.1. Unless explicitly specified otherwise, it is however up to UE implementation how to store the variables. The optionality of the IEs in ASN.1 is used only to indicate that the values may not always be available.

– *NR-UE-Variables*

This ASN.1 segment is the start of the NR UE variable definitions.

   nid-r18                   NID-r16
}
-- TAG-VARCONNESTFAILREPORT-STOP
-- ASN1STOP
```

– *VarConnEstFailReportList*

The UE variable *VarConnEstFailReportList* includes a list of the connection establishment failure and/or connection resume failure information.

VarConnEstFailReportList UE variable

```
-- ASN1START
-- TAG-VARCONNESTFAILREPORTLIST-START

VarConnEstFailReportList-r17 ::= SEQUENCE {
    connEstFailReportList-r17       SEQUENCE (SIZE (1..maxCEFReport-r17)) OF VarConnEstFailReport-r16
}

-- TAG-VARCONNESTFAILREPORTLIST-STOP
-- ASN1STOP
```

– *VarCSI-LogMeasReport*

The UE variable *VarCSI-LogMeasReport* includes the logged CSI measurements information for network-side data collection in accordance with *CSI-LoggedMeasurementConfig*.

VarCSI-LogMeasReport UE variable

```
-- ASN1START
-- TAG-VARCSI-LOGMEASREPORT-START

VarCSI-LogMeasReport-r19 ::=    SEQUENCE {
    csi-LogMeasInfoCellList-r19     CSI-LogMeasInfoCellList-r19
}

-- TAG-VARCSI-LOGMEASREPORT-STOP
-- ASN1STOP
```

– *VarLogMeasConfig*

The UE variable *VarLogMeasConfig* includes the configuration of the logging of measurements to be performed by the UE while in RRC_IDLE, RRC_INACTIVE, covering intra-frequency, inter-frequency and inter-RAT mobility related measurements. The UE performs logging of measurements only while in RRC_IDLE and RRC_INACTIVE.

VarLogMeasConfig UE variable

```
-- ASN1START
-- TAG-VARLOGMEASCONFIG-START
```

```
VarLogMeasConfig-r16 ::=    SEQUENCE {
    areaConfiguration-r16       AreaConfiguration-r16       OPTIONAL,

    }
}

-- TAG-VARLOGMEASREPORT-STOP
-- ASN1STOP
```

– *VarLTM-ExecutionConditionList*

The UE variable *VarLTM-ExecutionConditionList* is used to store the LTM execution conditions for MCG LTM currently used by the UE.

VarLTM-ExecutionConditionList UE variable

```
-- ASN1START
-- TAG-VARLTM-EXECUTIONCONDITIONLIST-START

VarLTM-ExecutionConditionList-r19 ::=    SEQUENCE {
   ltm-ExecutionConditionList-r19          LTM-ExecutionConditionList-r19
}

-- TAG-VARLTM-EXECUTIONCONDITIONLIST-STOP
-- ASN1STOP
```

– *VarLTM-ServingCellNoResetID*

The IE *VarLTM-ServingCellNoResetID* is used to store the ID associated with the serving cell based on which the UE determines whether a L2 reset is needed or not upon an LTM cell switch procedure which does not involve security key change.

VarLTM-ServingCellNoResetID UE variable

```
-- ASN1START
-- TAG-VARLTM-SERVINGCELLNORESETID-START

VarLTM-ServingCellNoResetID-r18 ::=    SEQUENCE {
   ltm-ServingCellNoResetID-r18          INTEGER (1..maxNrofLTM-Configs-plus1-r18)                  OPTIONAL
}

-- TAG-VARLTM-SERVINGCELLNORESETID-STOP
-- ASN1STOP
```

– *VarLTM-ServingCellNoSecurityChange*

The IE *VarLTM-ServingCellNoSecurityChange* is used to store the ID associated with the serving cell based on which the UE determines whether a security change is needed or not upon an LTM cell switch procedure and the list of *sk-counter* value that can be used when a security key change is performed at the SCG.

VarLTM-ServingCellNoSecurityChange UE variable

```
-- ASN1START
-- TAG-VARLTM-SERVINGCELLNOSECURITYCHANGE-START

VarLTM-ServingCellNoSecurityChange-r19 ::=    SEQUENCE {
   ltm-ServingCellNoSecurityChangeID-r19        INTEGER (1..maxNrofLTM-Configs-plus1-r18)                        OPTIONAL,
```

```
    ltm-SK-Counters-r19                     SEQUENCE (SIZE (1..maxSecurityCellSet-r18)) OF SK-CounterConfigLTM-r19    OPTIONAL
}

-- TAG-VARLTM-SERVINGCELLNOSECURITYCHANGE-STOP
-- ASN1STOP
```

– *VarLTM-ServingCellUE-MeasuredTA-ID*

The IE *VarLTM-ServingCellUE-MeasuredTA-ID* is used to store the ID associated with the serving cell based on which the UE determines whether UE-based TA measurements are needed or not.

***VarLTM-ServingCellUE-MeasuredTA-ID* UE variable**

```
-- ASN1START
-- TAG-VARLTM-SERVINGCELLUE-MEASUREDTA-ID-START

VarLTM-ServingCellUE-MeasuredTA-ID-r18 ::=    SEQUENCE {
    ltm-ServingCellUE-MeasuredTA-ID-r18         INTEGER (1..maxNrofLTM-Configs-plus1-r18)               OPTIONAL
}

-- TAG-VARLTM-SERVINGCELLUE-MEASUREDTA-ID-STOP
-- ASN1STOP
```

– *VarMeasConfig*

The UE variable *VarMeasConfig* includes the accumulated configuration of the measurements to be performed by the UE, covering intra-frequency, inter-frequency and inter-RAT mobility related measurements.

VarMeasConfig UE variable

```
-- ASN1START
-- TAG-VARMEASCONFIG-START

VarMeasConfig ::=               SEQUENCE {
    -- Measurement identities
    measIdList                    MeasIdToAddModList              OPTIONAL,
    -- Measurement objects
    measObjectList                 MeasObjectToAddModList           OPTIONAL,
    -- Reporting configurations
    reportConfigList               ReportConfigToAddModList          OPTIONAL,
    -- Other parameters
    quantityConfig                 QuantityConfig                  OPTIONAL,
    s-MeasureConfig                    CHOICE {

-- TAG-VARMEASREPORTLIST-STOP
-- ASN1STOP
```

– *VarMeasReportListSL*

The UE variable *VarMeasReportListSL* includes information about the NR sidelink measurements for which the triggering conditions have been met.

VarMeasReportListSL UE variable

```
-- ASN1START
-- TAG-VARMEASREPORTLISTSL-START

VarMeasReportListSL-r16 ::=            SEQUENCE (SIZE (1..maxNrofSL-MeasId-r16)) OF VarMeasReportSL-r16

VarMeasReportSL-r16 ::=               SEQUENCE {
    -- List of NR sidelink measurement that have been triggered
    sl-MeasId-r16                       SL-MeasId-r16,
    sl-FrequencyTriggeredList-r16          SEQUENCE (SIZE (1..maxNrofFreqSL-r16)) OF ARFCN-ValueNR           OPTIONAL,
    sl-NumberOfReportsSent-r16            INTEGER
}

-- TAG-VARMEASREPORTLISTSL-STOP
-- ASN1STOP
```

– *VarMeasReselectionConfig*

The UE variable *VarMeasReselectionConfig* includes the configuration for reporting the NR inter-frequency and inter-RAT (i.e. EUTRA) reselection measurements while in RRC_IDLE or RRC_INACTIVE for.

***VarMeasReselectionConfig UE* variable**

```
-- ASN1START
-- TAG-VARMEASRESELECTIONCONFIG-START

VarMeasReselectionConfig-r18 ::=    SEQUENCE {
   measReselectionCarrierListNR-r18    SEQUENCE (SIZE (1..maxFreqIdle-r16)) OF MeasReselectionCarrierNR-r18    OPTIONAL,
   measReselectionValidityDuration-r18  MeasurementValidityDuration-r18                                        OPTIONAL
}

-- TAG-VARMEASRESELECTIONCONFIG-STOP
-- ASN1STOP
```

– *VarMobilityHistoryReport*

The UE variable *VarMobilityHistoryReport* includes the mobility history information.

***VarMobilityHistoryReport* UE variable**

```
-- ASN1START
-- TAG-VARMOBILITYHISTORYREPORT-START

VarMobilityHistoryReport-r16 ::= VisitedCellInfoList-r16

VarMobilityHistoryReport-r17 ::= SEQUENCE {
   visitedCellInfoList-r16        VisitedCellInfoList-r16,
   visitedPSCellInfoList-r17      VisitedPSCellInfoList-r17       OPTIONAL
}

-- TAG-VARMOBILITYHISTORYREPORT-STOP
-- ASN1STOP
```

– *VarPendingRNA-Update*

The UE variable *VarPendingRNA-Update* indicates whether there is a pending RNA update procedure or not. The setting of this BOOLEAN variable to *true* means that there is a pending RNA Update procedure.

VarPendingRNA-Update UE variable

```
-- ASN1START
```

```
-- TAG-VARPENDINGRNA-UPDATE-START

VarPendingRNA-Update ::=              SEQUENCE {
    pendingRNA-Update               BOOLEAN                       OPTIONAL
}

-- TAG-VARPENDINGRNA-UPDATE-STOP
-- ASN1STOP
```

– *VarRA-Report*

The UE variable *VarRA-Report* includes the random-access related information.

VarRA-Report UE variable

```
-- ASN1START
-- TAG-VARRA-REPORT-START

VarRA-Report-r16 ::=     SEQUENCE {
    ra-ReportList-r16       RA-ReportList-r16,
    identityList-r18        CHOICE {
        plmn-IdentityList-r18    PLMN-IdentityList2-r16,
        snpn-IdentityList-r18    SEQUENCE (SIZE (1..maxNPN-r16)) OF SNPN-Identity-r18
    }
}

-- TAG-VARRA-REPORT-STOP
-- ASN1STOP
```

– *VarResumeMAC-Input*

The UE variable *VarResumeMAC-Input* specifies the input used to generate the *resumeMAC-I* during RRC Connection Resume procedure.

VarResumeMAC-Input UE variable

```
-- ASN1START
-- TAG-VARRESUMEMAC-INPUT-START

VarResumeMAC-Input  ::=    SEQUENCE {
    sourcePhysCellId                  PhysCellId,
    targetCellIdentity                CellIdentity,
    source-c-RNTI                    RNTI-Value
}

-- TAG-VARRESUMEMAC-INPUT-STOP
-- ASN1STOP
```

***VarResumeMAC-Input* field descriptions**
targetCellIdentity An input variable used to calculate the *resumeMAC-I*. Set to the *cellIdentity* of the first *PLMN-Identity* included in the *PLMN-IdentityInfoList* broadcasted in *SIB1* of the target cell i.e. the cell the UE is trying to resume.
source-c-RNTI Set to C-RNTI that the UE had in the PCell it was connected to prior to suspension of the RRC connection.
sourcePhysCellId Set to the physical cell identity of the PCell the UE was connected to prior to suspension of the RRC connection.

– *VarRLF-Report*

The UE variable *VarRLF-Report* includes the radio link failure information or handover failure information.

VarRLF-Report UE variable

```
-- ASN1START
-- TAG-VARRLF-REPORT-START

VarRLF-Report-r16 ::=   SEQUENCE {
   rlf-Report-r16         RLF-Report-r16,
   identityList-r18       CHOICE {
      plmn-IdentityList-r18   PLMN-IdentityList2-r16,
      snpn-IdentityList-r18   SEQUENCE (SIZE (1..maxNPN-r16)) OF SNPN-Identity-r18
   }
}

-- TAG-VARRLF-REPORT-STOP
-- ASN1STOP
```

– *VarServingSecurityCellSetID*

The UE variable *VarServingSecurityCellSetID* includes the security cell set ID of serving PSCell.

VarServingSecurityCellSetID UE variable

```
-- ASN1START
-- TAG-VARSERVINGSECURITYCELLSETID-START

VarServingSecurityCellSetID ::=     SEQUENCE {
   servingSecurityCellSetId-r18        INTEGER (1.. maxSecurityCellSet-r18)
}
```

```
-- TAG-VARSERVINGSECURITYCELLSETID-STOP
-- ASN1STOP
```

– *VarShortMAC-Input*

The UE variable *VarShortMAC-Input* specifies the input used to generate the *shortMAC-I* during RRC Connection Reestablishment procedure.

VarShortMAC-Input UE variable

```
-- ASN1START
-- TAG-VARSHORTMAC-INPUT-START

VarShortMAC-Input   ::=              SEQUENCE {
    sourcePhysCellId                    PhysCellId,
    targetCellIdentity                  CellIdentity,
    source-c-RNTI                      RNTI-Value
}

-- TAG-VARSHORTMAC-INPUT-STOP
-- ASN1STOP
```

***VarShortMAC-Input* field descriptions**
targetCellIdentity An input variable used to calculate the *shortMAC-I*. Set to the *cellIdentity* of the first *PLMN-Identity* in the *PLMN-IdentityInfoList* broadcasted in *SIB1* of the target cell i.e. the cell the UE is trying to reestablish the connection.
source-c-RNTI Set to C-RNTI that the UE had in the PCell it was connected to prior to the reestablishment.
sourcePhysCellId Set to the physical cell identity of the PCell the UE was connected to prior to the reestablishment.

– *VarSuccessHO-Report*

The UE variable *VarSuccessHO-Report* includes the successful handover information.

VarSuccessHO-Report UE variable

```
-- ASN1START
-- TAG-VARSUCCESSHO-Report-START

VarSuccessHO-Report-r17 ::=    SEQUENCE {
    successHO-Report-r17          SuccessHO-Report-r17,
    identityList-r18              CHOICE {
        plmn-IdentityList-r18         PLMN-IdentityList2-r16,
```

```
      snpn-IdentityList-r18         SEQUENCE (SIZE (1..maxNPN-r16)) OF SNPN-Identity-r18
   }
}
-- TAG-VARSUCCESSHO-Report-STOP
-- ASN1STOP
```

– *VarSuccessPSCell-Report*

The UE variable *VarSuccessPSCell-Report* includes the successful PSCell change or addition information.

VarSuccessPSCell-Report UE variable

```
-- ASN1START
-- TAG-VARSUCCESSPSCELL-Report-START

VarSuccessPSCell-Report-r18 ::=    SEQUENCE {
   successPSCell-Report-r18      SuccessPSCell-Report-r18,
   identityList-r18             CHOICE {
      plmn-IdentityList-r18         PLMN-IdentityList2-r16,
      snpn-IdentityList-r18         SEQUENCE (SIZE (1..maxNPN-r16)) OF SNPN-Identity-r18
   }
}

-- TAG-VARSUCCESSPSCELL-Report-STOP
-- ASN1STOP
```

– *VarTSS-Info*

The UE variable *VarTSS-Info* includes information about the current value of *eventID-TSS* and the current value of the global gNB Identity.

VarTSS-Info UE variable

```
-- ASN1START
-- TAG-VARTSS-INFO-START

VarTSS-Info-r18 ::= SEQUENCE {

```

8 Protocol data unit abstract syntax

8.1 General

The RRC PDU contents in clause 6 and clause 10 are described using abstract syntax notation one (ASN.1) as specified in ITU-T Rec. X.680 [6] and X.681 [7]. Transfer syntax for RRC PDUs is derived from their ASN.1 definitions by use of Packed Encoding Rules, unaligned as specified in ITU-T Rec. X.691 [8].

The following encoding rules apply in addition to what has been specified in X.691:

- When a bit string value is placed in a bit-field as specified in 15.6 to 15.11 in X.691, the leading bit of the bit string value shall be placed in the leading bit of the bit-field, and the trailing bit of the bit string value shall be placed in the trailing bit of the bit-field;

NOTE: The terms 'leading bit' and 'trailing bit' are defined in ITU-T Rec. X.680. When using the 'bstring' notation, the leading bit of the bit string value is on the left, and the trailing bit of the bit string value is on the right.

- When decoding types constrained with the ASN.1 Contents Constraint ("CONTAINING"), automatic decoding of the contained type should not be performed because errors in the decoding of the contained type should not cause the decoding of the entire RRC message PDU to fail. It is recommended that the decoder first decodes the outer PDU type that contains the OCTET STRING or BIT STRING with the Contents Constraint, and then decodes the contained type that is nested within the OCTET STRING or BIT STRING as a separate step;

- When decoding a) RRC message PDUs, b) BIT STRING constrained with a Contents Constraint, or c) OCTET STRING constrained with a Contents Constraint, PER decoders are required to never report an error if there are extraneous zero or non-zero bits at the end of the encoded RRC message PDU, BIT STRING or OCTET STRING.

8.2 Structure of encoded RRC messages

An RRC PDU, which is the bit string that is exchanged between peer entities/across the radio interface contains the basic production as defined in X.691.

RRC PDUs shall be mapped to and from PDCP SDUs (in case of DCCH) or RLC SDUs (in case of PCCH, BCCH or CCCH) upon transmission and reception as follows:

- when delivering an RRC PDU as an PDCP SDU to the PDCP layer for transmission, the first bit of the RRC PDU shall be represented as the first bit in the PDCP SDU and onwards; and

- when delivering an RRC PDU as an RLC SDU to the RLC layer for transmission, the first bit of the RRC PDU shall be represented as the first bit in the RLC SDU and onwards; and

- upon reception of an PDCP SDU from the PDCP layer, the first bit of the PDCP SDU shall represent the first bit of the RRC PDU and onwards; and

- upon reception of an RLC SDU from the RLC layer, the first bit of the RLC SDU shall represent the first bit of the RRC PDU and onwards.

8.3 Basic production

The 'basic production' is obtained by applying UNALIGNED PER to the abstract syntax value (the ASN.1 description) as specified in X.691. It always contains a multiple of 8 bits.

8.4 Extension

The following rules apply with respect to the use of protocol extensions:

- A transmitter compliant with this version of the specification shall, unless explicitly indicated otherwise on a PDU type basis, set the extension part empty. Transmitters compliant with a later version may send non-empty extensions;

- A transmitter compliant with this version of the specification shall set spare bits to zero.

8.5 Padding

If the encoded RRC message does not fill a transport block, the RRC layer shall add padding bits. This applies to PCCH and BCCH.

Padding bits shall be set to 0 and the number of padding bits is a multiple of 8.

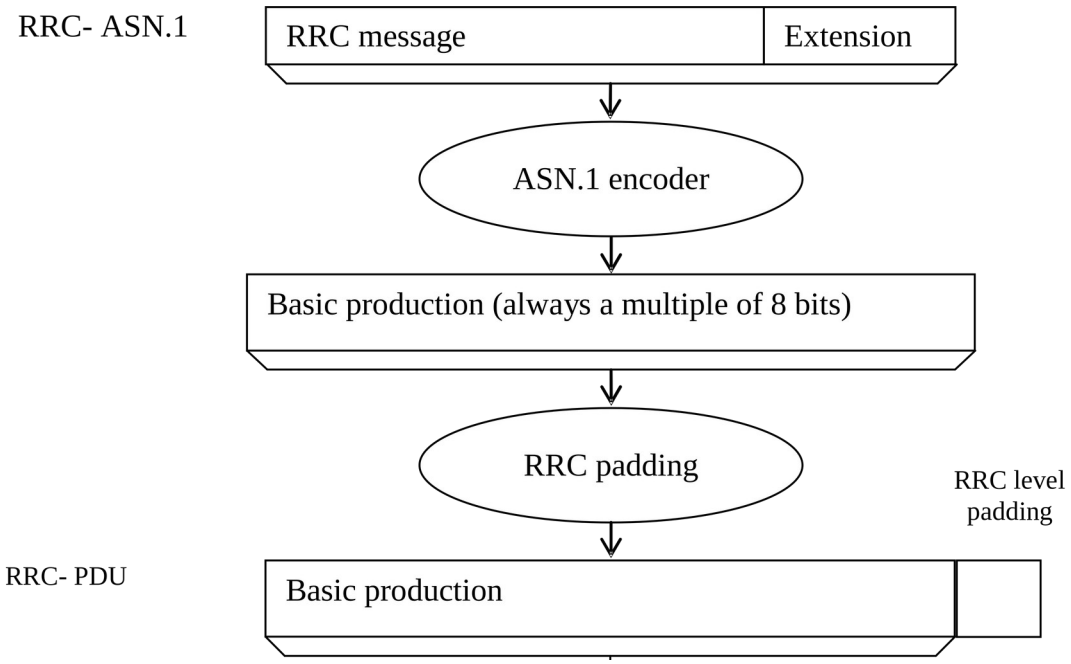

Figure 8.5-1: RRC level padding

9 Specified and default radio configurations

Specified and default configurations are configurations of which the details are specified in the standard. Specified configurations are fixed while default configurations can be modified using dedicated signalling. The default value for the parameters not listed in following clauses shall be set such as the corresponding features are not configured, i.e. *release* or *false* unless explicitly stated otherwise.

NOTE: The UE applies the default values specified in the field description of ASN.1 parameters only when the parent IE is present. Hence, the UE does not apply all default values in field descriptions when it applies the "default radio configuration" in accordance with this clause.

9.1 Specified configurations

9.1.1 Logical channel configurations

9.1.1.1 BCCH configuration

Parameters

Name	Value	Semantics description	Ver
SDAP configuration	Not used		
PDCP configuration	Not used		
RLC configuration	TM		
Logical channel configuration	Not used		

NOTE: RRC will perform padding, if required due to the granularity of the TF signalling, as defined in 8.5.

9.1.1.2 CCCH configuration

Parameters

Name	Value	Semantics description	Ver
SDAP configuration	Not used		
PDCP configuration	Not used		
RLC configuration	TM		
Logical channel configuration			
>priority	1	Highest priority	
>prioritisedBitRate	infinity		
>bucketSizeDuration	ms1000		
>logicalChannelGroup	0		

9.1.1.3 PCCH configuration

Parameters

Name	Value	Semantics description	Ver
SDAP configuration	Not used		
PDCP configuration	Not used		
RLC configuration	TM		
Logical channel configuration	Not used		

NOTE: RRC will perform padding, if required due to the granularity of the TF signalling, as defined in 8.5.

9.1.1.4 SCCH configuration

Parameters that are specified for unicast of NR sidelink communication, which is used for the sidelink signalling radio bearer of PC5-RRC message. The SL-SRB using this SCCH configuration is named as SL-SRB3.

Name	Value	Semantics description	Ver
PDCP configuration			
>*t-Reordering*	Undefined	Selected by the receiving UE, up to UE implementation

9.1.2 Void

9.2 Default radio configurations

The following clauses only list default values for REL-15 parameters included in protocol version v15.3.0. For all fields introduced in a later protocol version, the default value is "released" or "false" unless explicitly specified otherwise. If the UE is to apply default configuration while it is configured with some critically extended fields, the UE shall apply the original version of those fields with only default values.

NOTE 1: In general, the signalling should preferably support a "release" option for fields introduced after v15.3.0. The "value not applicable" should be used restrictively, mainly limited to for fields which value is relevant only if another field is set to a value other than its default.

NOTE 2: For parameters in *ServingCellConfig*, the default values are specified in the corresponding specification.

9.2.1 Default SRB configurations

Parameters

Name	Value			Semantics description	Ver

-- ASN1STOP
```

***SL-PreconfigurationNR* field descriptions**
sl-DRX-PreConfig-GC-BC This field indicates the sidelink DRX configuration for groupcast and broadcast communication, as specified in TS 38.321 [3].
sl-OffsetDFN Indicates the timing offset for the UE to determine DFN timing when GNSS is used for timing reference. Value 1 corresponds to 0.001 milliseconds, value 2 corresponds to 0.002 milliseconds, and so on. If the field is absent, no offset is applied.
sl-PosPreconfigFreqInfoList, sl-PosPreconfigFreqInfoListExt This field indicates the NR sidelink positioning carrier frequencies of SL-PRS dedicated resource pool for SL-PRS transmission and reception. In this release, only one entry of *SL-FreqConfigCommon* is included in the list. If network includes *sl-PosPreconfigFreqInfoListExt*, it includes the same number of entries, and listed in the same order, as in *sl-PosPreconfigFreqInfoList*. The first entry in *sl-PosPreconfigFreqInfoListExt* corresponds to the *AdditionalSpectrumEmission* of the frequency of first entry in *sl-PosPreconfigFreqInfoList*.
sl-PreconfigDiscConfig This field indicates the configuration for discovery message transmission used by NR sidelink U2N Remote UE, used by NR sidelink U2U Relay UE or used by NR sidelink U2U Remote UE.
sl-PreconfigEUTRA-AnchorCarrierFreqList This field indicates the EUTRA anchor carrier frequency list, which can provide the NR sidelink communication configuration.
sl-PreconfigFreqInfoList, sl-PreconfigFreqInfoListSizeExt, sl-PreconfigFreqInfoListExt This field indicates the NR sidelink communication and/ or NR sidelink discovery configuration some carrier frequency(ies). In this release, only one *SL-FreqConfig* can be configured in *sl-PreconfigFreqInfoList*. More entries of SL-FreqConfig can be configured in *sl-PreconfigFreqInfoListSizeExt*. If *sl-PreconfigFreqInfoListExt* is included, it contains the same number of entries, and listed in the same order, as in *sl-PreconfigFreqInfoList* together with *sl-PreconfigFreqInfoListSizeExt*. The first entry corresponds to the AdditionalSpectrumEmission of the frequency of first entry in *sl-PreconfigFreqInfoList*, the second entry corresponds to the AdditionalSpectrumEmission of the frequency of first entry in *sl-PreconfigFreqInfoListSizeExt*, the third entry corresponds to the AdditionalSpectrumEmission of the frequency of second entry in *sl-PreconfigFreqInfoListSizeExt* and so on.
sl-PreconfigNR-AnchorCarrierFreqList This field indicates the NR anchor carrier frequency list, which can provide the NR sidelink communication configuration.
sl-RadioBearerPreConfigList This field indicates one or multiple sidelink radio bearer configurations.
sl-RLC-BearerPreConfigList, sl-RLC-BearerPreConfigListSizeExt This field indicates one or multiple sidelink RLC bearer configurations.
sl-RoHC-Profiles This field indicates the supported RoHC profiles for NR sidelink communications.
sl-SSB-PriorityNR This field indicates the priority of NR sidelink SSB transmission and reception.
sl-SyncFreqList Indicates a list of candidate carrier frequencies that can be used for the synchronisation of NR sidelink communication. For *SL-Freq-Id-r16*, the value 1 corresponds to the frequency of first entry in *sl-PreconfigFreqInfoList*, the value 2 corresponds to the frequency of first entry in *sl-PreconfigFreqInfoListSizeExt*, the value 3 corresponds to the frequency of second entry in *sl-PreconfigFreqInfoListSizeExt* and so on.
sl-SyncTxMultiFreq Indicates that the UE transmits S-SSB on multiple carrier frequencies for NR sidelink communication. If this field is absent, the UE transmits S-SSB only on the synchronisation carrier frequency.
sl-TxProfileList List of one or multiple Tx profiles, indicating the compatibility of supporting SL DRX as specified in TS 38.321 [3]. Value *drx-Compatible* means SL DRX is supported, and value *drx-Incompatible* means SL DRX is not supported. It is up to the UE implementation whether/how to apply this field.

***SL-PreconfigurationNR* field descriptions**
sl-DRX-PreConfig-GC-BC This field indicates the sidelink DRX configuration for groupcast and broadcast communication, as specified in TS 38.321 [3].
t400 Indicates the value for timer T400 as described in clause 7.1. Value *ms100* corresponds to 100 ms, value *ms200* corresponds to 200 ms and so on.
t400-U2U Indicates the value for timer T400 to be applied for end-to-end PC5 connection in sidelink U2U relay operation as described in clause 7.1. Value *ms200* corresponds to 200 ms, value *ms400* corresponds to 400 ms and so on.

9.5 Void

10 Generic error handling

10.1 General

The generic error handling defined in the subsequent clauses applies unless explicitly specified otherwise e.g. within the procedure specific error handling.

The UE shall consider a value as not comprehended when it is set:

- to an extended value that is not defined in the version of the transfer syntax supported by the UE;
- to a spare or reserved value unless the specification defines specific behaviour that the UE shall apply upon receiving the concerned spare/reserved value.

The UE shall consider a field as not comprehended when it is defined:

- as spare or reserved unless the specification defines specific behaviour that the UE shall apply upon receiving the concerned spare/reserved field.

10.2 ASN.1 violation or encoding error

The UE shall:

1> when receiving an RRC message on the BCCH, CCCH, PCCH, MCCH, multicast MCCH or a PC5 RRC message on SBCCH for which the abstract syntax is invalid [6]:

2> ignore the message.

NOTE: This clause applies in case one or more fields is set to a value, other than a spare, reserved or extended value, not defined in this version of the transfer syntax. E.g. in the case the UE receives value 12 for a field defined as INTEGER (1..11). In cases like this, it may not be possible to reliably detect which field is in the error hence the error handling is at the message level.

10.3 Field set to a not comprehended value

The UE shall, when receiving an RRC message or PC5 RRC message on any logical channel:

1> if the message includes a field that has a value that the UE does not comprehend:

2> if a default value is defined for this field:

3> treat the message while using the default value defined for this field;

2> else if the concerned field is optional:

3> treat the message as if the field were absent and in accordance with the need code for absence of the concerned field;

2> else:

3> treat the message as if the field were absent and in accordance with clause 10.4.

10.4 Mandatory field missing

The UE shall:

1> if the message includes a field that is mandatory to include in the message (e.g. because conditions for mandatory presence are fulfilled) and that field is absent or treated as absent:

2> if the RRC message was not received on DCCH or CCCH; or

2> if the PC5 RRC message was not received on SCCH:

3> if the field concerns a (sub-field of) an entry of a list (i.e. a SEQUENCE OF):

4> treat the list as if the entry including the missing or not comprehended field was absent;

3> else if the field concerns a sub-field of another field, referred to as the 'parent' field i.e. the field that is one nesting level up compared to the erroneous field:

4> consider the 'parent' field to be set to a not comprehended value;

4> apply the generic error handling to the subsequent 'parent' field(s), until reaching the top nesting level i.e. the message level;

3> else (field at message level):

4> ignore the message.

NOTE 1: The error handling defined in these clauses implies that the UE ignores a message with the message type or version set to a not comprehended value.

NOTE 2: The nested error handling for messages received on logical channels other than DCCH, CCCH and SCCH applies for errors in extensions also, even for errors that can be regarded as invalid network operation e.g. the network not observing conditional presence.

NOTE 3: UE behaviour on receipt of an RRC message on DCCH or CCCH or a PC5 RRC message on SCCH that does not include a field that is mandatory (e.g. because conditions for mandatory presence are fulfilled) is unspecified.

The following ASN.1 further clarifies the levels applicable in case of nested error handling for errors in extension fields.

```
-- /example/ ASN1START

-- Example with extension addition group

ItemInfoList ::=                SEQUENCE (SIZE (1..max)) OFItemInfo

ItemInfo ::=                    SEQUENCE {
    itemIdentity                    INTEGER (1..max),
    field1                        Field1,
    field2                        Field2              OPTIONAL,         -- Need N
    ...
    [[
    field3-r9                   Field3-r9           OPTIONAL,          -- Cond Cond1
    field4-r9                   Field4-r9           OPTIONAL           -- Need N
    ]]
}

-- Example with traditional non-critical extension (empty sequence)

BroadcastInfoBlock1 ::=           SEQUENCE {
    itemIdentity                    INTEGER (1..max),
    field1                        Field1,
    field2                        Field2              OPTIONAL,         -- Need N
    nonCriticalExtension            BroadcastInfoBlock1-v940-IEs    OPTIONAL
}

BroadcastInfoBlock1-v940-IEs::= SEQUENCE {
    field3-r9                     Field3-r9           OPTIONAL,          -- Cond Cond1
    field4-r9                     Field4-r9           OPTIONAL,          -- Need N
    nonCriticalExtension            SEQUENCE {}         OPTIONAL          -- Need S
}

-- ASN1STOP
```

The UE shall, apply the following principles regarding the levels applicable in case of nested error handling:

- an extension addition group is not regarded as a level on its own. E.g. in the ASN.1 extract in the previous, a error regarding the conditionality of *field3* would result in the entire itemInfo entry to be ignored (rather than just the extension addition group containing *field3* and *field4*);

- a traditional *nonCriticalExtension* is not regarded as a level on its own. E.g. in the ASN.1 extract in the previous, an error regarding the conditionality of *field3* would result in the entire *BroadcastInfoBlock1* to be ignored (rather than just the non-critical extension containing *field3* and *field4*).

10.5 Not comprehended field

The UE shall, when receiving an RRC message on any logical channel:

1> if the message includes a field that the UE does not comprehend:

2> treat the rest of the message as if the field was absent.

NOTE: This clause does not apply to the case of an extension to the value range of a field. Such cases are addressed instead by the requirements in clause 10.3.

11 Radio information related interactions between network nodes

11.1 General

This clause specifies RRC messages that are transferred between network nodes. These RRC messages may be transferred to or from the UE via another Radio Access Technology. Consequently, these messages have similar characteristics as the RRC messages that are transferred across the NR radio interface, i.e. the same transfer syntax and protocol extension mechanisms apply.

11.2 Inter-node RRC messages

11.2.1 General

This clause specifies RRC messages that are sent either across the X2-, Xn- or the NG-interface, either to or from the gNB, i.e. a single 'logical channel' is used for all RRC messages transferred across network nodes. The information could originate from or be destined for another RAT.

11.2.2 Message definitions

– *CG-CandidateList*

This message is used to transfer the SCG radio configuration for one or more candidate cells for Conditional PSCell Addition (CPA), Conditional PSCell Change (CPC), inter-SN subsequent CPAC, or CHO with candidate SCG(s) as generated by the candidate target SgNB, or the serving SgNB in case of intra-SN subsequent CPAC configuration(s) which are delivered embedded within an RRC message generated by the MN.

Direction: Secondary gNB to master gNB or eNB.

***CG-CandidateList* message**

***CG-CandidateList* field descriptions**
cg-CandidateToAddModList Contains information regarding candidate target cells to be added or modified for Conditional PSCell Addition (CPA), Conditional PSCell Change (CPC), inter-SN subsequent CPAC, or CHO with candidate SCG(s) from the candidate target secondary node or from the serving secondary node for intra-SN subsequent CPAC in configuration(s) which are delivered embedded within an RRC message generated by the MN.
cg-CandidateToReleaseList Contains information regarding candidate target cells for CPA, CPC, inter-SN subsequent CPAC, or CHO with candidate SCG(s) to be removed from the candidate target secondary node or from the serving secondary node for intra-SN subsequent CPAC in configuration(s) which are delivered embedded within an RRC message generated by the MN. This list is not used in CPA, CPC, subsequent CPAC, or CHO with candidate SCG(s) preparation.

***CG-CandidateInfo* field descriptions**
cg-CandidateInfoId SSB frequency and Physical Cell Identity of the candidate target cell.
candidateCG-Config *CG-Config* message corresponding to the cell indicated by *cg-CandidateInfoId*.

– *HandoverCommand*

This message is used to transfer the handover command as generated by the target gNB.

Direction: target gNB to source gNB/source RAN.

HandoverCommand message

-- ASN1STOP
```

***HandoverCommand* field descriptions**
candPSCellExecCondReportConfigNR Contains execution condition parameters of candidate PSCells in case of CHO with candidate SCG(s). This fields can include only *a4-Threshold*, *hysteresis*, *timeToTrigger*, and *rsType* associated to *condEventA4*.
handoverCommandMessage Contains the *RRCReconfiguration* message used to perform handover within NR or handover to NR, as generated (entirely) by the target gNB.

– *HandoverPreparationInformation*

This message is used to transfer the NR RRC information used by the target gNB during handover preparation or UE context retrieval, e.g. in case of resume or re-establishment, including UE capability information. This message is also used for transferring the information between the CU and DU.

Direction: source gNB/source RAN to target gNB or CU to DU.

***HandoverPreparationInformation* field descriptions**
as-Context Local RAN context required by the target gNB or DU.
rrm-Config Local RAN context used mainly for RRM purposes.
sourceConfig The radio resource configuration as used in the source cell.
ue-CapabilityRAT-List The UE radio access related capabilities concerning RATs supported by the UE. A gNB that retrieves MRDC related capability containers ensures that the set of included MRDC containers is consistent w.r.t. the feature set related information.
ue-InactiveTime Duration while UE has not received or transmitted any user data. Thus the timer is still running in case e.g., UE measures the neighbour cells for the HO purpose. Value *s1* corresponds to 1 second, *s2* corresponds to 2 seconds and so on. Value *min1* corresponds to 1 minute, value *min1s20* corresponds to 1 minute and 20 seconds, value *min1s40* corresponds to 1 minute and 40 seconds and so on. Value *hr1* corresponds to 1 hour, *hr1min30* corresponds to 1 hour and 30 minutes and so on.

***AS-Config* field descriptions**
rrcReconfiguration Contains the *RRCReconfiguration* configuration as generated entirely by the MN. If the *TMGI-r17* is included in the *MRB-ToAddMod-r17* in the *RadioBearerConfig*, the *plmn-Index* is replaced by the PLMN ID, if needed.
sdt-Config Contains the IE *SDT-Config* as generated entirely by the last serving gNB. This field is only used during the SDT procedure and the RNA update procedure with UE context relocation as defined in TS 38.300 [2], clause 18.2 and 9.2.2.5 respectively.
sourceRB-SN-Config Contains the IE *RadioBearerConfig* as generated entirely by the SN. This field is only used when the UE is configured with SN terminated RB(s).
sourceSCG-Configured Value *true* indicates that the UE is configured with NR or EUTRA SCG in source configuration. The field is only used in NR-DC and NE-DC and is included only if the fields *sourceSCG-NR-Config* and *sourceSCG-EUTRA-Config* are absent.
sourceSCG-EUTRA-Config Contains the current dedicated SCG configuration in *RRCConnectionReconfiguration* message as specified in TS 36.331 [10] and generated entirely by the SN. In this version of the specification, the E-UTRA *RRCConnectionReconfiguration* message can only include the field *scg-Configuration* . This field is only used in NE-DC.
sourceSCG-NR-Config Contains the current dedicated SCG configuration in *RRCReconfiguration* message as generated entirely by the SN. In this version of the specification, the *RRCReconfiguration* message can only include fields *secondaryCellGroup, measConfig*, and *conditionalReconfiguration*. This field is only used in NR-DC.
srs-PosRRC-InactiveValidityAreaPreConfigList Contains the IE *SRS-PosRRC-InactiveValidityAreaPreConfigList* as generated entirely by the last serving gNB. This field is only used UE is preconfigured with SRS for positioning with validity area and during the RNA update procedure with UE context relocation as defined in TS 38.300 [2], clause 18.2 and 9.2.2.5 respectively.

***AS-Context* field descriptions**
configRestrictInfoDAPS Includes fields for which source cell explicitly indicates the restriction to be observed by target cell during DAPS handover.
mbsInterestIndication Includes the information last reported by the UE in the NR *MBSInterestIndication* message, where the *plmn-Index* (if included by the UE in *tmgi*) is replaced by the PLMN ID, if needed. A TMGI for which the *plmn-Index* points to a non-serving SNPN is removed from the NR *MBSInterestIndication* message.
needForGapsInfoNR Includes measurement gap requirement information of the UE for NR target bands. The field includes *needForGapsInfoNR* in *RRCReconfigurationComplete* message, *needForGapsInfoNR* in *RRCResumeComplete* message or *musim-needForGapsInfoNR* in *UEAssistanceInformation* message that is last reported by the UE, if any.
retainLoggedMeasurements Indication to the target gNB that the UE shall retain logged measurements available in *VarCSI-LogMeasReport* at execution of the handover. If included, the target gNB is allowed to include the corresponding indication to the UE within the *HandoverCommand* message.
selectedBandCombinationSN Indicates the band combination selected by SN in (NG)EN-DC, NE-DC, and NR-DC.
sidelinkUEInformationEUTRA This field includes *SidelinkUEInformation* IE as specified in TS 36.331 [10].
sidelinkUEInformationNR This field includes *SidelinkUEInformationNR* IE.
ue-ApplicabilityReportList Includes information related to the applicability of prediction configurations and/or sets of parameters for prediction configurations that has been reported by the UE.
ueAssistanceInformation Includes for each UE assistance feature the information last reported by the UE, if any.
ueAssistanceInformationSCG Includes for each UE assistance feature associated with the SCG, the information last reported by the UE in the NR *UEAssistanceInformation* message for the SCG, if any.

***ConfigRestrictInfoDAPS* field descriptions**
sourceFeatureSetPerUplinkCC/sourceFeatureSetPerDownlinkCC Indicates an index referring to the position of the *FeatureSetUplinkPerCC*/*FeatureSetDownlinkPerCC* selected by source in the *featureSetsUplinkPerCC*/*featureSetsDownlinkPerCC*.

***RRM-Config* field descriptions**
candidateCellInfoList A list of the best cells on each frequency for which measurement information was available
candidateCellInfoListSN-EUTRA A list of EUTRA cells including serving cells and best neighbour cells on each serving frequency, for which measurement results were available. This field is only used in NE-DC.

Conditional Presence	Explanation
HO	The field is mandatory present in case of handover within NR or UE context retrieval, e.g. in case of resume or re-establishment. The field is optionally present in case of handover from E-UTRA/5GC. Otherwise the field is absent.
HO2	The field is optionally present in case of handover within NR; otherwise the field is absent.

NOTE 1: The following table indicates per source RAT whether RAT capabilities are included or not.

Source RAT	NR capabilities	E-UTRA capabilities	MR-DC capabilities	UTRA capabilities
NR	May be included if UE Radio Capability ID as specified in 23.502 [43] is used for the UE. Included otherwise.	May be included	May be included	May be included, ignored by gNB if received
E-UTRAN	May be included if UE Radio Capability ID as specified in 23.502 [43] is used for the UE. Included otherwise.	May be included	May be included	May be included, ignored by gNB if received

NOTE 2: The following table indicates, in case of inter-RAT handover from E-UTRA, which additional IEs are included or not:

Source system	sourceConfig	rrm-Config	as-Context
E-UTRA/EPC	Not included	May be included	Not included
E-UTRA/5GC	May be included, but only *radioBearerConfig* is included in the *RRCReconfiguration*.	May be included	Not included

– *CG-Config*

This message is used to transfer the SCG radio configuration as generated by the SgNB or SeNB. It can also be used by a CU to request a DU to perform certain actions, e.g. to request the DU to perform a new lower layer configuration.

Direction: Secondary gNB or eNB to master gNB or eNB, alternatively CU to DU.

***CG-Config* field descriptions**
aggregatedBandwidthSN Used to indicate or request the maximum aggregated bandwidth at the SN side if the *supportedAggBW-FR1* was reported for the *selectedBandCombination* or *requestedBC-MRDC*, respectively. This field is only used in NR-DC. - *aggBW-FDD-DL/UL-r17* indicates the aggregated bandwidth across FDD DL/UL CCs in SCG; - *aggBW-TDD-DL/UL-r17* indicates the aggregated bandwidth across TDD DL/UL CCs in SCG; - *aggBW-TotalDL/UL-r17* indicates the aggregated bandwidth across all DL/UL CCs in SCG.
candidateCellInfoListCPC Contains information regarding candidate target cells for Conditional PSCell Change (CPC) or inter-SN subsequent CPAC that the source secondary gNB suggests the target secondary gNB to consider configuring for CPC or subsequent CPAC, and/or that the source secondary gNB prepares for intra-SN subsequent CPAC configuration(s) which are delivered embedded within an RRC message generated by the MN. This field is only used in SN initiated CPC and SN initiated subsequent CPAC.
candidateCellInfoListSN Contains information regarding cells that the source secondary node suggests the target secondary gNB to consider configuring.
candidateCellInfoListSN-EUTRA Includes the *MeasResultList3EUTRA* as specified in TS 36.331 [10]. Contains information regarding cells that the source secondary node suggests the target secondary eNB to consider configuring. This field is only used in NE-DC.
candidateCellInfoListSubsequentCPC Contains information regarding candidate target cells for subsequent CPAC that candidate secondary gNB (or the serving secondary gNB in case of intra-SN subsequent CPAC configuration(s) which are delivered embedded within an RRC message generated by the MN) suggests the master gNB to consider configuring for subsequent CPAC. This field is only used in MN initiated and SN initiated subsequent CPAC. This field is only included in a *CG-Config* message which is contained within a *CG-CandidateList* message.
candidateServingFreqListNR, candidateServingFreqListEUTRA Indicates frequencies of candidate serving cells for In-Device Co-existence Indication (see TS 36.331 [10]).
candidateServingFreqListNR-r18 Indicates the candidate frequencies configured by SN for IDC. This field is only used in NR-DC.
candidateServingFreqRangeListNR Indicates the candidate frequency ranges configured by SN for IDC. This field is only used in NR-DC.
configRestrictModReq Used by SN to request changes to SCG configuration restrictions previously set by MN to ensure UE capabilities are respected and to indicate the configured/reserved SCG resources. E.g. can be used to request configuring an NR band combination whose use MN has previously forbidden. SN only includes this field in SN-initiated procedures unless this field is used to indicate configured/reserved SCG resources (corresponding to *reservedResourceConfigNRDC* and/or *aggregatedBandwidthSN*) only.
drx-ConfigSCG This field contains the complete DRX configuration of the SCG. This field is only used in NR-DC.
drx-InfoSCG This field contains the DRX long and short cycle configuration of the SCG. This field is used in (NG)EN-DC and NE-DC.
drx-InfoSCG2 This field contains the drx-onDurationTimer configuration of the SCG. This field is only used in (NG)EN-DC.
fr-InfoListSCG Contains information of FR information of serving cells that include PScell and SCells configured in SCG.
fr1-Carriers-SCG, fr2-Carriers-SCG Indicates the number of FR1 or FR2 serving cells configured in SCG.
idc-TDM-AssistanceConfig Indicates if the IDC TDM reporting is enabled for the UE by SN. This field is only used in NR-DC.

ltm-Config The field contains the LTM candidate configuration(s) to be used at the SCG. This field is only used in NR-DC.
ltm-ReferenceConfigurationSCG The field contains the LTM reference configuration to be used at the SCG. This field is only used in NR-DC.
measuredFrequenciesSN Used by SN to indicate a list of frequencies measured by the UE.
needForGaps In NE-DC, indicates whether the SN requests gNB to configure measurements gaps.
ph-InfoSCG Power headroom information in SCG that is needed in the reception of PHR MAC CE of MCG
ph-SupplementaryUplink Power headroom information for supplementary uplink. In the case of (NG)EN-DC and NR-DC, this field is only present when two UL carriers are configured for a serving cell and one UL carrier reports type1 PH while the other reports type 3 PH.
ph-Type1or3 Type of power headroom for a certain serving cell in SCG (PSCell and activated SCells). Value *type1* refers to type 1 power headroom, value *type3* refers to type 3 power headroom. (See TS 38.321 [3]).
ph-Uplink Power headroom information for uplink.
pSCellFrequency, pSCellFrequencyEUTRA Indicates the frequency of PSCell in NR (i.e., *pSCellFrequency*) or E-UTRA (i.e., *pSCellFrequencyEUTRA*). In this version of the specification, *pSCellFrequency* is not used in NE-DC whereas *pSCellFrequencyEUTRA* is only used in NE-DC. *pSCellFrequency* indicates the *absoluteFrequencySSB*.
reportCGI-RequestNR, reportCGI-RequestEUTRA Used by SN to indicate to MN about configuring *reportCGI* procedure. The request may optionally contain information about the cell for which SN intends to configure *reportCGI* procedure. In this version of the specification, the *reportCGI-RequestNR* is used in (NG)EN-DC and NR-DC whereas *reportCGI-RequestEUTRA* is used only for NE-DC.
requestedBC-MRDC Used to request configuring a band combination and corresponding feature sets which are forbidden to use by MN (i.e. outside of the *allowedBC-ListMRDC*) to allow re-negotiation of the UE capabilities for SCG configuration.
requestedInterSN-LTM Used to request to configure inter-SN LTM candidate configuration(s) at the SCG. This field is only used in NR-DC.
requestedL1-MeasConfigNRDC Used to request the maximum number of allowed resources for L1 measurements to be configured for LTM at the SCG. This field is only used in NR-DC.
requestedLTM-ResourceConfigNRDC Used to request the maximum number of allowed resources for configuring LTM at the SCG. This field is only used in NR-DC.
requestedMaxInterFreqMeasIdSCG Used to request the maximum number of allowed measurement identities to configure for inter-frequency measurement. This field is only used in NR-DC.
requestedMaxIntraFreqMeasIdSCG Used to request the maximum number of allowed measurement identities to configure for intra-frequency measurement on each serving frequency.
requestedMaxLTM-CandidateIdSCG Used to request the maximum number of allowed LTM candidate configurations to configure. This field is only used in NR-DC.
requestedPDCCH-BlindDetectionSCG Requested value of the reference number of cells for PDCCH blind detection allowed to be configured for the SCG.
requestedP-MaxEUTRA

Requested value for the maximum power for the serving cells the UE can use in E-UTRA SCG. This field is only used in NE-DC.
requestedP-MaxFR1 Requested value for the maximum power for the serving cells on frequency range 1 (FR1) in this secondary cell group (see TS 38.104 [12]) the UE can use in NR SCG.
requestedP-MaxFR2 Requested value for the maximum power for the serving cells on frequency range 2 (FR2) in this secondary cell group the UE can use in NR SCG. This field is only used in NR-DC.
requestedToffset Requests the new value for the time offset restriction used by the SN for scheduling SCG transmissions (i.e. $T^{max}_{proc,SCG,}$ see TS 38.213 [13]). This field is used in NR-DC only when the fields *nrdc-PC-mode-FR1-r16* or *nrdc-PC-mode-FR2-r16* are set to dynamic. Value ms0dot5 corresponds to 0.5 ms, value ms0dot75 corresponds to 0.75 ms, value ms1 corresponds to 1ms and so on.
reservedResourceConfigNRDC Used to request or indicate the maximum number of resources reserved for the SCG. This field is only used in NR-DC.
scellFrequenciesSN-EUTRA, scellFrequenciesSN-NR Indicates the frequency of all SCells with SSB configured in SCG. The field *scellFrequenciesSN-EUTRA* is used in NE-DC; the field *scellFrequenciesSN-NR* is used in (NG)EN-DC and NR-DC. In (NG)EN-DC, the field is optionally provided to the MN. *scellFrequenciesSN-NR* indicates *absoluteFrequencySSB*.
scg-CellGroupConfig Contains the *RRCReconfiguration* message (containing only *secondaryCellGroup* and/or *measConfig* and/or *otherConfig* and/or *appLayerMeasConfig* and/or *conditionalReconfiguration*, *ltm-Config*, and/or *bap-Config* and/or *iab-IP-AddressConfigurationList*): - to be sent to the UE, used upon SCG establishment or modification (only when the SCG is not released by the SN), as generated (entirely) by the (target) SgNB. In this case, the SN sets the *RRCReconfiguration* message in accordance with clause 6 e.g. regarding the "Need" or "Cond" statements. or - including the current SCG configuration of the UE, when provided in response to a query from MN, or in SN triggered SN change in order to enable delta signaling by the target SN, or in SN triggered modification procedure in order to coordinate CHO or MN-initiated CPC with SCG reconfigurations (see TS 38.423 [35]). In this case, the SN sets the *RRCReconfiguration* message in accordance with clause 11.2.3. The field is absent if neither SCG (re)configuration nor SCG configuration query nor SN triggered modification procedure in order to coordinate CHO or MN-initiated CPC with SCG reconfigurations (see TS 38.423 [35]) nor SN triggered SN change is performed, e.g. at inter-node capability/configuration coordination which does not result in SCG (re)configuration towards the UE. The field is also absent upon an SCG release triggered by the SN. This field is not applicable in NE-DC.
scg-CellGroupConfigEUTRA Includes the E-UTRA *RRCConnectionReconfiguration* message as specified in TS 36.331 [10]. In this version of the specification, the E-UTRA RRC message can only include the field *scg-Configuration*: - to be sent to the UE, used to (re-)configure the SCG configuration upon SCG establishment or modification (only when the SCG is not released by the SN), as generated (entirely) by the (target) SeNB. In this case, the SN sets the *scg-Configuration* within the EUTRA *RRCConnectionReconfiguration* message in accordance with clause 6 in TS 36.331 [10] e.g. regarding the "Need" or "Cond" statements. or - including the current SCG configuration of the UE, when provided in response to a query from MN, or in SN triggered SN change in order to enable delta signalling by the target SN. The field is absent if neither SCG (re)configuration nor SCG configuration query nor SN triggered SN change is performed, e.g. at inter-node capability/configuration coordination which does not result in SCG (re)configuration towards the UE. The field is also absent upon an SCG release triggered by the SN. This field is only used in NE-DC.
scg-RB-Config

Contains the IE *RadioBearerConfig*: - to be sent to the UE, used to (re-)configure the SCG RB configuration upon SCG establishment or modification, as generated (entirely) by the (target) SgNB or SeNB. In this case, the SN sets the *RadioBearerConfig* in accordance with clause 6, e.g. regarding the "Need" or "Cond" statements. or - including the current SCG RB configuration of the UE, when provided in response to a query from MN or in SN triggered SN change or in SN triggered SN release or bearer type change between SN terminated bearer to MN terminated bearer in order to enable delta signaling by the MN or target SN. In this case, the SN sets the *RadioBearerConfig* in accordance with clause 11.2.3. The field is absent if neither SCG (re)configuration nor SCG configuration query nor SN triggered SN change nor SN triggered SN release is performed, e.g. at inter-node capability/configuration coordination which does not result in SCG RB (re)configuration.
scpac-ReferenceConfigurationSCG Includes the reference configuration associated with the SCG for the candidate supporting subsequent CPAC.
selectedBandCombination Indicates the band combination selected by SN in (NG)EN-DC, NE-DC, and NR-DC. The SN should inform the MN with this field whenever the band combination and/or feature set it selected for the SCG changes (i.e. even if the new selection concerns a band combination and/or feature set that is allowed by the *allowedBC-ListMRDC*)
selectedToffset Indicates the value used by the SN for scheduling SCG transmissions (i.e. $T_{proc,SCG}^{max}$, see TS 38.213 [13]). This field is used in NR-DC only when the fields *nrdc-PC-mode-FR1-r16* or *nrdc-PC-mode-FR2-r16* are set to dynamic. The SN can only indicate a value that is less than or equal to *maxToffset* received from MN. This field is used in NR-DC only when MN has included the field *maxToffset* in *CG-ConfigInfo*. Value *ms0dot5* corresponds to 0.5 ms, value *ms0dot75* corresponds to 0.75 ms, value *ms1* corresponds to 1ms and so on.
servCellInfoListSCG-EUTRA Indicates the carrier frequency and the transmission bandwidth of the serving cell(s) in the SCG in intra-band NE-DC. The field is needed when MN and SN operate serving cells in the same band for either contiguous or non-contiguous intra-band band combination or LTE NR inter-band band combinations where the frequency range of the E-UTRA band is a subset of the frequency range of the NR band (as specified in Table 5.5B.4.1-1 of TS 38.101-3 [34]) in NE-DC.
servCellInfoListSCG-NR Indicates the frequency band indicator, carrier center frequency, UE specific channel bandwidth and SCS of the serving cell(s) in the SCG in intra-band (NG)EN-DC. The field is needed when MN and SN operate serving cells in the same band for either contiguous or non-contiguous intra-band band combination or LTE NR inter-band band combinations where the frequency range of the E-UTRA band is a subset of the frequency range of the NR band (as specified in Table 5.5B.4.1-1 of TS 38.101-3 [34]) in (NG)EN-DC.
subsequentCPAC-Information Contains information about handling of stored subsequent CPAC configurations for the UE that the target secondary gNB suggests the master gNB to consider configuring for normal PSCell addition or change. It includes information about updates of execution conditions for the subsequent CPAC configurations that are to be kept at the PSCell addition/change.
successPSCell-Config Include the successful PSCell change or addition report configuration in case of SN initiated PSCell change or CPC. The *thresholdPercentageT304-SCG* is not configured in this message.
twoPHRModeSCG Indicates if the power headroom for SCG shall be reported as two PHRs (each PHR associated with a SRS resource set) is enabled or not.
twoSRS-MultipanelScheme Indicates whether the indicated serving cell is configured with multiple panel simultaneous uplink transmission schemes of multipanelSchemeSDM or multipanelSchemeSFN corresponding to two SRS resource sets configured in either *srs-ResourceSetToAddModList* or *srs-ResourceSetToAddModListDCI-0-2* with usage 'codebook' or 'noncodebook'.
twoSRS-PUSCH-Repetition Indicates whether the indicated serving cell is configured for PUSCH repetition corresponding to two SRS resource sets configured in either *srs-ResourceSetToAddModList*

or *srs-ResourceSetToAddModListDCI-0-2* with usage 'codebook' or 'noncodebook'.
transmissionBandwidth-EUTRA Indicates the transmission bandwidth on an E-UTRA carrier frequency as defined by the parameter Transmission Bandwidth Configuration "NRB" TS 36.104 [33]. The values rb6, rb15, rb25, rb50, rb75, rb100 indicate 6, 15, 25, 50, 75 and 100 resource blocks respectively.
ueAssistanceInformationSCG Includes for each UE assistance feature associated with the SCG, the information last reported by the UE in the NR *UEAssistanceInformation* message for the SCG, if any.

***BandCombinationInfoSN* field descriptions**
bandCombinationIndex In case of NR-DC, this field indicates the position of a band combination in the *supportedBandCombinationList*. In case of NE-DC, this field indicates the position of a band combination in the *supportedBandCombinationList* and/or *supportedBandCombinationListNEDC-Only*. In case of (NG)EN-DC, this field indicates the position of a band combination in the *supportedBandCombinationList* and/or *supportedBandCombinationList-UplinkTxSwitch*. Band combination entries in *supportedBandCombinationList* are referred by an index which corresponds to the position of a band combination in the *supportedBandCombinationList*. Band combination entries in *supportedBandCombinationListNEDC-Only* are referred by an index which corresponds to the position of a band combination in the *supportedBandCombinationListNEDC-Only* increased by the number of entries in *supportedBandCombinationList*. Band combination entries in *supportedBandCombinationList-UplinkTxSwitch* are referred by an index which corresponds to the position of a band combination in the *supportedBandCombinationList-UplinkTxSwitch* increased by the number of entries in *supportedBandCombinationList*.
requestedFeatureSets The position in the *FeatureSetCombination* which identifies one *FeatureSetUplink/Downlink* for each band entry in the associated band combination

Conditional Presence	Explanation
FDD	This field is mandatory present if dl-FreqInfo-NR is included and concerns an FDD carrier; otherwise the field is absent.

– *CG-ConfigInfo*

This message is used by master eNB or gNB to request the SgNB or SeNB to perform certain actions e.g. to establish, modify or release an SCG. The message may include additional information e.g. to assist the SgNB or SeNB to set the SCG configuration. It can also be used by a CU to request a DU to perform certain actions, e.g. to establish, or modify an MCG or SCG.

Direction: Master eNB or gNB to secondary gNB or eNB, alternatively CU to DU.

***CG-ConfigInfo* field descriptions**
affectedCarrierFreqCombList This field is signalled upon MN not addressing IDC issue and contains the list of NR carrier frequency combinations reported by UE to MN for IDC problem caused by the NR-DC frequency combination.
affectedCarrierFreqRangeCombList This field is signalled upon MN not addressing IDC issue and contains the list of NR carrier frequency range combinations reported by UE to MN for IDC problem caused by the NR-DC frequency combination.
alignedDRX-Indication This field is signalled upon MN triggered CGI reporting by the UE that requires aligned DRX configurations between the MCG and the SCG (i.e. same DRX cycle and on-duration configured by MN completely contains on-duration configured by SN).
allowedAggregatedBandwidthSNList A list of allowed maximum aggregated bandwidth at the SN side for the band combination included in the *allowedBC-ListMRDC*. This field is only used in NR-DC.
allowedBC-ListMRDC A list of indices referring to band combinations in MR-DC capabilities from which SN is allowed to select the SCG band combination. Each entry refers to: - a band combination numbered according to *supportedBandCombinationList* and *supportedBandCombinationList-UplinkTxSwitch* in the *UE-MRDC-Capability* (in case of (NG)EN-DC), or according to *supportedBandCombinationList* and *supportedBandCombinationListNEDC-Only* in the *UE-MRDC-Capability* (in case of NE-DC), or according to *supportedBandCombinationList* in the UE-NR-Capability (in case of NR-DC), - and the Feature Sets allowed for each band entry. All MR-DC band combinations indicated by this field comprise the MCG band combination, which is a superset of the MCG band(s) selected by MN.
allowedInterSN-LTM Used to indicate whether the SCG can configure inter-SN LTM candidate configuration. If the field is absent the SN is not allowed to configure inter-SN LTM candidate configurations. This field is only used in NR-DC.
allowedL1-MeasConfigNRDC Used to indicate the maximum number of allowed resources for L1 measurements to be configured for LTM at the SCG. This field is only used in NR-DC.
allowedLTM-ResourceConfigNRDC Used to indicate the maximum number of allowed resources for configuring LTM at the SCG. This field is only used in NR-DC.
allowedReducedConfigForOverheating Indicates the reduced configuration that the SCG is allowed to configure. *reducedMaxCCs* in *allowedReducedConfigForOverheating* indicates the maximum number of downlink/uplink PSCell/SCells that the SCG is allowed to configure. This field is used in (NG)EN-DC and NR-DC. *reducedMaxBW-FR1* and *reducedMaxBW-FR2* in *allowedReducedConfigForOverheating* indicates the maximum aggregated bandwidth across all downlink/uplink carriers of FR1 and FR2-1, respectively that the SCG is allowed to configure. *reducedMaxBW-FR2-2* in *allowedReducedConfigForOverheating-r17* indicates the maximum aggregated bandwidth across all downlink/uplink carriers of FR2-2 that the SCG is allowed to configure. This field is only used in NR-DC. *reducedMaxMIMO-LayersFR1* and *reducedMaxMIMO-LayersFR2* in *allowedReducedConfigForOverheating* indicates the maximum number of downlink/uplink MIMO layers of each serving cell operating on FR1 and FR2-1, respectively that the SCG is allowed to configure. *reducedMaxMIMO-LayersFR2-2* in *allowedReducedConfigForOverheating-r17* indicates the maximum number of downlink/uplink MIMO layers of each serving cell operating on FR2-2 that the SCG is allowed to configure. This field is only used in NR-DC.
allowedResourceConfigNRDC Used to indicate the maximum number of resources reserved for the SCG. This field is only used in NR-DC.
candidateCellInfoListMN, ***candidateCellInfoListSN*** Contains information regarding cells that the master node or the source node suggests the target gNB or DU to consider configuring. In case of MN initiated CPA, CPC or CHO with candidate SCG(s), the field *candidateCellInfoListMN* contains information regarding cells that the MN suggests the candidate target secondary node to consider configuring for MN initiated CPA, CPC, CHO with candidate SCG(s), or subsequent CPAC. For (NG)EN-DC, including CSI-RS measurement results in *candidateCellInfoListMN* is not supported in this version of the specification. For NR-DC, including SSB and/or

CSI-RS measurement results in *candidateCellInfoListMN* is supported.
candidateCellInfoListMN-EUTRA, ***candidateCellInfoListSN-EUTRA*** Includes the *MeasResultList3EUTRA* as specified in TS 36.331 [10]. Contains information regarding cells that the master node or the source node suggests the target secondary eNB to consider configuring. These fields are only used in NE-DC.
candidateCellListCPC Contains information regarding cells that the source secondary node suggests the candidate target secondary node to consider configuring for SN initiated Conditional PSCell Change (CPC) or SN initiated inter-SN subsequent CPAC.
configRestrictInfo Includes fields for which SgNB is explicitly indicated to observe a configuration restriction.
drx-ConfigMCG This field contains the complete DRX configuration of the MCG. This field is only used in NR-DC.
drx-InfoMCG This field contains the DRX long and short cycle configuration of the MCG. This field is used in (NG)EN-DC and NE-DC.
drx-InfoMCG2 This field contains the *drx-onDurationTimer* configuration of the MCG. This field is only used in (NG)EN-DC.
dummy, dummy1 These fields are not used in the specification and SN ignores the received value(s).
fr-InfoListMCG Contains information of FR information of serving cells that include PCell and SCell(s) configured in MCG.
fr1-Carriers-MCG, fr2-Carriers-MCG Indicates the number of FR1 or FR2 serving cells configured in MCG.
hsdn-Cell Used by MN to provide SN with *hsdn-Cell* for the cell reported in *measResultReportCGI-EUTRA* as per SN′s request. In this version of the specification, this field is used only for NE-DC.
idc-TDM-Assistance This field is signalled upon MN not addressing IDC issue and contains IDC TDM assistance information reported by UE to MN for IDC problem.
interFreqNoGap Indicates that the field *interFrequencyConfig-NoGap-r16* has been included within the *MeasConfig* IE generated by the MN.
lowMobilityEvaluationConnectedInPCell Indicates if low mobility criterion has been configured in NR PCell.
ltm-ReferenceConfigurationMCG The field contains the LTM reference configuration to be used at the SCG. This field is only used in NR-DC.
maxInterFreqMeasIdentitiesSCG Indicates the maximum number of allowed measurement identities that the SCG is allowed to configure for inter-frequency measurement. The maximum value for this field is 10. If the field is absent, the SCG is allowed to configure inter-frequency measurements up to the maximum value. This field is only used in NR-DC.
maxIntraFreqMeasIdentitiesSCG Indicates the maximum number of allowed measurement identities that the SCG is allowed to configure for intra-frequency measurement on each serving frequency. The maximum value for this field is 9 (in case of (NG)EN-DC or NR-DC) or 10 (in case of NE-DC). If the field is absent, the SCG is allowed to configure intra-frequency measurements up to the maximum value on each serving frequency.
maxMeasCLI-ResourceSCG Indicates the maximum number of CLI RSSI resources that the SCG is allowed to configure.
maxMeasFreqsSCG Indicates the maximum number of NR inter-frequency carriers the SN is allowed to configure with PSCell for measurements.

maxMeasSRS-ResourceSCG Indicates the maximum number of SRS resources that the SCG is allowed to configure for CLI measurement.
maxNumberCPCCandidates Indicates the maximum numbers of conditional reconfigurations the SN is allowed to configure for SN initiated CPC. Value 0 indicates that the SN is not allowed to configure SN initiated CPC. If the field is absent, the SN is allowed to configure up to *maxNrofCondCells-r16* conditional reconfigurations for SN-initiated CPC.
maxNumberEHC-ContextsSN Indicates the maximum number of EHC contexts allowed to the SN terminated bearer. The field indicates the number of contexts in addition to CID = "all zeros", as specified in TS 38.323 [5].
maxNumberLTM-CandidatesSCG Indicates the maximum number of LTM candidate configurations that the SN is allowed to configure. If the field is absent the SN is not allowed to configure LTM candidate configurations. This field is only used in NR-DC.
maxNumberROHC-ContextSessionsSN Indicates the maximum number of ROHC context sessions allowed to SN terminated bearer, excluding context sessions that leave all headers uncompressed.
maxNumberUDC-DRB Indicates the maximum number of UDC DRBs allowed to SN terminated bearer. This field is used in NGEN-DC, NR-DC and NE-DC.
maxToffset Indicates the maximum Toffset value the SN is allowed to use for scheduling SCG transmissions (see TS 38.213 [13]). This field is used in NR-DC only when the fields *nrdc-PC-mode-FR1-r16* or *nrdc-PC-mode-FR2-r16* are set to dynamic. Value *ms0dot5* corresponds to 0.5 ms, value *ms0dot75* corresponds to 0.75 ms, value *ms1* corresponds to 1 ms and so on.
measuredFrequenciesMN Used by MN to indicate a list of frequencies measured by the UE.
measGapConfig Indicates the FR1 and perUE measurement gap configuration configured by MN.
measGapConfigFR2 Indicates the FR2 measurement gap configuration configured by MN.
mcg-RB-Config Contains all of the fields in the IE *RadioBearerConfig* used in MN, used by the SN to support delta configuration to UE (i.e. when MN does not use full configuration option), for bearer type change between MN terminated bearer with NR PDCP to SN terminated bearer. It is also used to indicate the PDCP duplication related information for MN terminated split bearer (whether duplication is configured and if so, whether it is initially activated) in SN Addition/Modification procedure. Otherwise, this field is absent.
measResultReportCGI, measResultReportCGI-EUTRA Used by MN to provide SN with CGI-Info for the cell as per SN's request. In this version of the specification, the *measResultReportCGI* is used for (NG)EN-DC and NR-DC and the *measResultReportCGI-EUTRA* is used only for NE-DC.
measResultSCG-EUTRA This field includes the *MeasResultSCG-FailureMRDC* IE as specified in TS 36.331 [10]. This field is only used in NE-DC.
measResultSFTD-EUTRA SFTD measurement results between the PCell and the E-UTRA PScell in NE-DC. This field is only used in NE-DC.
mrdc-AssistanceInfo Contains the IDC assistance information for MR-DC reported by the UE (see TS 36.331 [10]).
musim-CapRestrictionInfo Indicates the UE's preference on SCell(s) or PSCell to be released, serving cell(s) with restricted capability, band(s) or combination(s) of bands with restricted capability, or band(s) or band combination(s) to be avoided for UE temporary capabilities restriction purpose with the *musim-candidateBandList-r18* only for *musim-AffectedBandsList-r18* and *musim-AvoidedBandsList-r18*. All fields in *musim-CapRestriction-r18* can be sent from MN to SN, i.e., it is up to MN implementation to decide which field(s) need to be sent.

musim-GapConfigInfo Indicates the MUSIM gap configuration configured by MN.
nrdc-PC-mode-FR1 Indicates the uplink power sharing mode that the UE uses in NR-DC FR1 (see TS 38.213 [13], clause 7.6).
nrdc-PC-mode-FR2 Indicates the uplink power sharing mode that the UE uses in NR-DC FR2 (see TS 38.213 [13], clause 7.6).
overheatingAssistanceSCG Contains the UE's preference on reduced configuration for NR SCG to address overheating. This field is only used in (NG)EN-DC.
overheatingAssistanceSCG-FR2-2 Contains the UE's preference on reduced configuration for NR SCG on FR2-2 to address overheating. This field is only used in (NG)EN-DC.
p-maxEUTRA Indicates the maximum total transmit power to be used by the UE in the E-UTRA cell group (see TS 36.104 [33]). This field is used in (NG)EN-DC and NE-DC.
p-maxNR-FR1 For (NG)EN-DC and NE-DC, the field indicates the maximum total transmit power to be used by the UE in the NR cell group across all serving cells in frequency range 1 (FR1) (see TS 38.104 [12]). For NR-DC, it indicates the maximum total transmit power to be used by the UE in the NR cell group across all serving cells in frequency range 1 (FR1) (see TS 38.104 [12]) the UE can use in NR SCG.
p-maxUE-FR1 Indicates the maximum total transmit power to be used by the UE across all serving cells in frequency range 1 (FR1).
p-maxNR-FR1-MCG Indicates the maximum total transmit power to be used by the UE in the NR cell group across all serving cells in frequency range 1 (FR1) (see TS 38.104 [12]) the UE can use in NR MCG. This field is only used in NR-DC.
p-maxNR-FR2-SCG Indicates the maximum total transmit power to be used by the UE in the NR cell group across all serving cells in frequency range 2 (FR2) (see TS 38.104 [12]) the UE can use in NR SCG.
p-maxUE-FR2 Indicates the maximum total transmit power to be used by the UE across all serving cells in frequency range 2 (FR2).
p-maxNR-FR2-MCG Indicates the maximum total transmit power to be used by the UE in the NR cell group across all serving cells in frequency range 2 (FR2) (see TS 38.104 [12]) the UE can use in NR MCG.
pdcch-BlindDetectionSCG Indicates the maximum value of the reference number of cells for PDCCH blind detection allowed to be configured for the SCG.
ph-InfoMCG Power headroom information in MCG that is needed in the reception of PHR MAC CE in SCG.
ph-SupplementaryUplink Power headroom information for supplementary uplink. For UE in (NG)EN-DC, this field is absent.
ph-Type1or3 Type of power headroom for a serving cell in MCG (PCell and activated SCells). *type1* refers to type 1 power headroom, *type3* refers to type 3 power headroom. (See TS 38.321 [3]).
ph-Uplink Power headroom information for uplink.
powerCoordination-FR1 Indicates the maximum power that the UE can use in FR1.
powerCoordination-FR2

Indicates the maximum power that the UE can use in frequency range 2 (FR2). This field is only used in NR-DC.
scgFailureInfo Contains SCG failure type and measurement results. In case the sender has no measurement results available, the sender may include one empty entry (i.e. without any optional fields present) in *measResultPerMOList*. This field is used in (NG)EN-DC and NR-DC.
scg-RB-Config Contains all of the fields in the IE RadioBearerConfig used in SN, used to allow the target SN to use delta configuration to the UE, e.g. during SN change. The field is signalled upon change of SN unless MN uses full configuration option. Otherwise, the field is absent.
scpac-ReferenceConfiguration Includes the reference configuration associated with the SCG for the candidate supporting subsequent CPAC.
selectedBandEntriesMNList A list of indices referring to the position of a band entry selected by the MN, in each band combination entry in *allowedBC-ListMRDC* IE. *BandEntryIndex* 0 identifies the first band in the *bandList* of the *BandCombination*, *BandEntryIndex* 1 identifies the second band in the *bandList* of the *BandCombination*, and so on. This *selectedBandEntriesMNList* includes the same number of entries, and listed in the same order as in *allowedBC-ListMRDC*. The SN uses this information to determine which bands out of the NR band combinations in *allowedBC-ListMRDC* it can configure in SCG in NR-DC. The SN can use this information to determine for which band pair(s) it should check *SimultaneousRxTxPerBandPair*.
servCellIndexRangeSCG Range of serving cell indices that SN is allowed to configure for SCG serving cells.
servCellInfoListMCG-EUTRA Indicates the carrier frequency and the transmission bandwidth of the serving cell(s) in the MCG in intra-band (NG)EN-DC. The field is needed when MN and SN operate serving cells in the same band for either contiguous or non-contiguous intra-band band combination or LTE NR inter-band band combinations where the frequency range of the E-UTRA band is a subset of the frequency range of the NR band (as specified in Table 5.5B.4.1-1 of TS 38.101-3 [34]) in (NG)EN-DC.
servCellInfoListMCG-NR Indicates the frequency band indicator, carrier center frequency, UE specific channel bandwidth and SCS of the serving cell(s) in the MCG in intra-band NE-DC. The field is needed when MN and SN operate serving cells in the same band for either contiguous or non-contiguous intra-band band combination or LTE NR inter-band band combinations where the frequency range of the E-UTRA band is a subset of the frequency range of the NR band (as specified in Table 5.5B.4.1-1 of TS 38.101-3 [34]) in NE-DC.
servFrequenciesMN-NR Indicates the frequency of all serving cells that include PCell and SCell(s) with SSB configured in MCG. This field is only used in NR-DC. *servFrequenciesMN-NR* indicates *absoluteFrequencySSB*.
sftdFrequencyList-NR Includes a list of SSB frequencies. Each entry identifies the SSB frequency of a PSCell, which corresponds to one *MeasResultCellSFTD-NR* entry in the *MeasResultCellListSFTD-NR*.
sftdFrequencyList-EUTRA Includes a list of E-UTRA frequencies. Each entry identifies the carrier frequency of a PSCell, which corresponds to one *MeasResultSFTD-EUTRA* entry in the *MeasResultCellListSFTD-EUTRA*.
sidelinkUEInformationEUTRA This field contains the E-UTRA *SidelinkUEInformation* message as specified in TS 36.331 [10].
sidelinkUEInformationNR This field contains the NR *SidelinkUEInformationNR* message.
sourceConfigSCG Includes all of the current SCG configurations used by the target SN to build delta configuration to be sent to UE, e.g. during SN change. The field contains the *RRCReconfiguration* message which may include *secondaryCellGroup, measConfig*, and *conditionalReconfiguration*. The field is signalled upon change of SN, unless MN uses full configuration option. Otherwise, the field is absent.
sourceConfigSCG-EUTRA

Includes the E-UTRA *RRCConnectionReconfiguration* message as specified in TS 36.331 [10]. In this version of the specification, the E-UTRA RRC message can only include the field *scg-Configuration.* In this version of the specification, this field is absent when master gNB uses full configuration option. This field is only used in NE-DC.
subsequentCPAC-Candidates Includes the subsequent CPAC candidate PSCells that the UE has stored in MCG *VarConditionalReconfig*.
twoPHRModeMCG Indicates if the power headroom for MCG shall be reported as two PHRs (each PHR associated with a SRS resource set) is enabled or not.
twoSRS-PUSCH-Repetition Indicates whether the indicated serving cell is configured for PUSCH repetition corresponding to two SRS resource sets configured in either *srs-ResourceSetToAddModList* or *srs-ResourceSetToAddModListDCI-0-2* with usage 'codebook' or 'noncodebook'.
twoSRS-MultipanelScheme Indicates whether the indicated serving cell is configured with multiple panel simultaneous uplink transmission schemes of multipanelSchemeSDM or multipanelSchemeSFN corresponding to two SRS resource sets configured in either *srs-ResourceSetToAddModList* or *srs-ResourceSetToAddModListDCI-0-2* with usage 'codebook' or 'noncodebook'.
ueAssistanceInformationSourceSCG Includes for each UE assistance feature associated with the SCG, the information last reported by the UE in the NR *UEAssistanceInformation* message for the source SCG, if any.
ue-CapabilityInfo Contains the IE *UE-CapabilityRAT-ContainerList* supported by the UE (see NOTE 3). A gNB that retrieves MRDC related capability containers ensures that the set of included MRDC containers is consistent w.r.t. the feature set related information.

***BandCombinationInfo* field descriptions**
allowedFeatureSetsList Defines a subset of the entries in a *FeatureSetCombination*. Each index identifies a position in the *FeatureSetCombination*, which corresponds to one *FeatureSetUplink*/*Downlink* for each band entry in the associated band combination.
bandCombinationIndex In case of NR-DC, this field indicates the position of a band combination in the *supportedBandCombinationList*. In case of NE-DC, this field indicates the position of a band combination in the *supportedBandCombinationList* and/or *supportedBandCombinationListNEDC-Only*. In case of (NG)EN-DC, this field indicates the position of a band combination in the *supportedBandCombinationList* and/or *supportedBandCombinationList-UplinkTxSwitch*. Band combination entries in *supportedBandCombinationList* are referred by an index which corresponds to the position of a band combination in the *supportedBandCombinationList*. Band combination entries in *supportedBandCombinationListNEDC-Only* are referred by an index which corresponds to the position of a band combination in the *supportedBandCombinationListNEDC-Only* increased by the number of entries in *supportedBandCombinationList*. Band combination entries in *supportedBandCombinationList-UplinkTxSwitch* are referred by an index which corresponds to the position of a band combination in the *supportedBandCombinationList-UplinkTxSwitch* increased by the number of entries in *supportedBandCombinationList*.

***AllowedAggregatedBandwidth* field descriptions**
AllowedAggregatedBandwidth Indicates the allowed maximum aggregated bandwidth at the SN side. - *allowedAggBW-FDD-DL/UL-r17* indicates the allowed maximum aggregated bandwidth across FDD DL/UL CCs in SCG; - *allowedAggBW-TDD-DL/UL-r17* indicates the allowed maximum aggregated bandwidth across TDD DL/UL CCs in SCG; - *allowedAggBW-TotalDL/UL-r17* indicates the allowed maximum aggregated bandwidth across all DL/UL CCs in SCG.
bandCombinationIndex This field indicates the position of a band combination in the *supportedBandCombinationList*. Band combination entries in *supportedBandCombinationList* are referred by an index which corresponds to the position of a band combination in the *supportedBandCombinationList*. Band combination entries in *supportedBandCombinationList-UplinkTxSwitch* are referred by an index which corresponds to the position of a band combination in the *supportedBandCombinationList-UplinkTxSwitch* increased by the number of entries in *supportedBandCombinationList*.

Conditional Presence	Explanation
SN-AddMod	The field is mandatory present upon SN addition and SN change. It is optionally present upon SN modification and inter-MN handover without SN change. Otherwise, the field is absent.

NOTE 3: The following table indicates per MN RAT and SN RAT whether RAT capabilities are included or not in *ue-CapabilityInfo*.

MN RAT	SN RAT	NR capabilities	E-UTRA capabilities	MR-DC capabilities
E-UTRA	NR	Need not be included if the UE Radio Capability ID as specified in 23.502 [43] is used. Included otherwise	Not included	Need not be included if the UE Radio Capability ID as specified in 23.502 [43] is used. Included otherwise
NR	E-UTRA	Not included	Need not be included if the UE Radio Capability ID as specified in 23.502 [43] is used. Included otherwise	Need not be included if the UE Radio Capability ID as specified in 23.502 [43] is used. Included otherwise
NR	NR	Need not be included if the UE Radio Capability ID as specified in 23.502 [43] is used. Included otherwise	Not included	Not included

– *MeasurementTimingConfiguration*

The *MeasurementTimingConfiguration* message is used to convey assistance information for measurement timing and to indicate which neighbour cell SSB is CD-SSB. The other indicated SSB can be considered as the NCD-SSB in use.

Direction: en-gNB to eNB, eNB to en-gNB, gNB to gNB, ng-eNB to gNB, gNB to ng-eNB, ng-eNB to ng-eNB, gNB DU to gNB CU, and gNB CU to gNB DU.

***MeasTiming* field descriptions**
carrierFreq, ssbSubcarrierSpacing Indicates the frequency and subcarrier spacing of the SS block of the cell for which this message is included, or of other SS blocks within the same carrier.
ssb-MeasurementTimingConfiguration Indicates the SMTC which can be used to search for SSB of the cell for which the message is included. When the message is included in "Served NR Cell Information" (see TS 36.423 [37]), "Served Cell Information NR" (see TS 38.423 [35]), or "Served Cell Information" (see TS 38.473 [36]), the timing is based on the cell for which the message is included. When the message is included in "NR Neighbour Information" (see TS 36.423 [37]), or "Served Cell Information" (see TS 38.423 [35]), the timing is based on the cell indicated in the "Served NR Cell Information" or "Served Cell Information NR" with which the "NR Neighbour Information" or "Neighbour Information NR" is provided. When the message is included in "CU to DU RRC Information", the timing is based on the cell indicated by SpCell ID with which the message is included. If the field is provided by an NTN cell, the offset (derived from parameter *periodicityAndOffset*) is based on the assumption that the NTN payload to gNB propagation delay of the cell for which the message is included equals to 0 ms.
ss-RSSI-Measurement Provides the configuration which can be used for RSSI measurements of the cell for which the message is included.

***MeasurementTimingConfiguration* field descriptions**
campOnFirstSSB Value *true* indicates that the SSB indicated in the first instance of *MeasTiming* in the *measTiming* list can be used for camping and for a PCell configuration (i.e. in *spCellConfigCommon* of the *masterCellGroup*) and to indicate which neighbour cell SSB is CD-SSB and which one is NCD-SSB in use.
csi-RS-CellMobility Indicates the CSI-RS configuration of the cell for which this message is included. The timing of the CSI-RS resources is based on the SSB indicated by *refSSBFreq*.
csi-RS-SubcarrierSpacing Indicates the subcarrier spacing of the CSI-RS resources included in *csi-rs-CellMobility*.
measTiming A list of SMTC information, SSB RSSI measurement information and associated NR frequency exchanged via EN-DC X2 Setup, EN-DC Configuration Update, Xn Setup and NG-RAN Node Configuration Update procedures, or F1 messages between gNB DU and gNB CU.
physCellId Physical Cell Identity of the SSB on the ARFCN indicated by *carrierFreq*.
psCellOnlyOnFirstSSB Value *true* indicates that only the SSB indicated in the first instance of *MeasTiming* in the *measTiming* list can be used for a PSCell configuration (i.e. in *spCellConfigCommon* of the *secondaryCellGroup*).
ssb-ToMeasure The set of SS blocks to be measured within the SMTC measurement duration (see TS 38.215 [9]).

– *UERadioPagingInformation*

This message is used to transfer radio paging information, covering both upload to and download from the 5GC, and between gNBs.

Direction: gNB to/ from 5GC and gNB to/from gNB

UERadioPagingInformation message

***UERadioPagingInformation* field descriptions**
supportedBandListNRForPaging Indicates the UE supported NR frequency bands which are derived by the gNB from *UE-NR-Capability*.
dl-SchedulingOffset-PDSCH-TypeA-FDD-FR1 Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type A in FDD FR1.
dl-SchedulingOffset-PDSCH-TypeA-FDD-FR2-NTN Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type A in FDD FR2-NTN.
dl-SchedulingOffset-PDSCH-TypeA-TDD-FR1 Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type A in TDD FR1.
dl-SchedulingOffset-PDSCH-TypeA-TDD-FR2 Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type A in TDD FR2.
dl-SchedulingOffset-PDSCH-TypeB-FDD-FR1 Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type B in FDD FR1.
dl-SchedulingOffset-PDSCH-TypeB-FDD-FR2-NTN Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type B in FDD FR2-NTN.
dl-SchedulingOffset-PDSCH-TypeB-TDD-FR1 Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type B in TDD FR1.
dl-SchedulingOffset-PDSCH-TypeB-TDD-FR2 Indicates whether the UE supports DL scheduling slot offset (K0) greater than 0 for PDSCH mapping type B in TDD FR2.
halfDuplexFDD-TypeA-RedCap Indicates whether the (e)RedCap UE only supports half-duplex operation for FDD in the indicated band(s).
inactiveStatePO-Determination Indicates whether the UE supports to use the same i_s to determine PO in RRC_INACTIVE state as in RRC_IDLE state.
nesCellDTX-DRX-PerBand Indicates whether the UE supports *nes-CellDTX-DRX* in the indicated band(s).
numberOfRxERedCap Indicates the number of Rx branches supported by an eRedCap UE.
numberOfRxRedCap Indicates the number of Rx branches supported by a RedCap UE.
oneRxE-RedCapPerBand Indicates whether the eRedCap UE supports 1Rx branch in the indicated band(s) which is derived by the gNB from *maxNumberMIMO-LayersPDSCH* from *UE-NR-Capability*. If this field is included, the *numberOfRxERedCap-r18* may be ignored by a receiving gNB.
oneRxRedCapPerBand Indicates whether the RedCap UE supports 1Rx branch in the indicated band(s) which is derived by the gNB from *maxNumberMIMO-LayersPDSCH* from *UE-NR-Capability*. If this field is included, the *numberOfRxRedCap-r17* may be ignored by a receiving gNB.
supportOf2RxXR Indicates whether the UE is a 2Rx XR UE.
twoRxE-RedCapPerBand Indicates whether the eRedCap UE supports 2Rx branches in the indicated band(s) which is derived by the gNB from *maxNumberMIMO-LayersPDSCH* from *UE-NR-Capability*. If this field is included, the *numberOfRxERedCap-r18* may be ignored by a receiving gNB.
twoRxRedCapPerBand Indicates whether the RedCap UE supports 2Rx branches in the indicated band(s) which is derived by the gNB from *maxNumberMIMO-LayersPDSCH* from *UE-NR-Capability*. If this field is included, the *numberOfRxRedCap-r17* may be ignored by a receiving gNB.

twoRxXR-PerBand Indicates whether the UE supports 2Rx XR in the indicated band(s). If this field is included, the *supportOf2RxXR-r18* may be ignored by a receiving gNB.
ue-RadioPagingInfo The field is used to transfer UE capability information used for paging. The gNB generates the ue-RadioPagingInfo-r17 and the contained UE capability information is absent when not supported by the UE. The content of *ue-RadioPagingInfo-r19* is generated by the UE.

– *UERadioAccessCapabilityInformation*

This message is used to transfer UE radio access capability information, covering both upload to and download from the 5GC.

Direction: ng-eNB or gNB to/ from 5GC

```

UERadioAccessCapabilityInformation-IEs field descriptions
ue-RadioAccessCapabilityInfo Including NR, MR-DC, E-UTRA radio access capabilities. A gNB that retrieves MRDC related capability containers ensures that the set of included MRDC containers is consistent w.r.t. the feature set related information.

11.2.3 Mandatory information in inter-node RRC messages

For the *AS-Config* transferred within the *HandoverPreparationInformation*:

- The source node shall include all fields necessary to reflect the current AS configuration of the UE, except for the fields *sourceSCG-NR-Config*, *sourceSCG-EUTRA-Config* and *sourceRB-SN-Config*, which can be omitted in case the source MN did not receive the latest configuration from the source SN. For *RRCReconfiguration* included in the field *rrcReconfiguration*, *ReconfigurationWithSync* is included with only the mandatory subfields (e.g. *newUE-Identity* and *t304*) and *ServingCellConfigCommon*;

- Need codes or conditions specified for subfields according to IEs defined in clause 6 do not apply. I.e. some fields shall be included regardless of the "Need" or "Cond" e.g. *discardTimer*;

- Based on the received AS configuration, the target node can indicate the delta (difference) to the current AS configuration (as included in *HandoverCommand*)to the UE. The fields *newUE-Identity* and *t304* included in *ReconfigurationWithSync* are not used for delta configuration purpose.

The *candidateCellInfoListSN*(*-EUTRA*) in *CG-Config* and the *candidateCellInfoListMN*(*-EUTRA*)/*candidateCellInfoListSN*(*-EUTRA*) in *CG-ConfigInfo* need not be included in procedures that do not involve a change of node.

For fields *scg-CellGroupConfig*, *scg-CellGroupConfigEUTRA* and *scg-RB-Config* in *CG-Config* (sent upon SN initiated SN change or other conditions as specified in field descriptions) and fields *mcg-RB-Config*, *scg-RB-Config* and *sourceConfigSCG* in *CG-ConfigInfo* (sent upon change of SN):

- The source node shall include all fields necessary to reflect the current AS configuration of the UE, unless stated otherwise in the field description. For *RRCReconfiguration* included in the field *scg-CellGroupConfig in CG-Config*, *ReconfigurationWithSync* is included with only the mandatory subfields (e.g. *newUE-Identity* and *t304*) and *ServingCellConfigCommon*;

- Need codes or conditions specified for subfields according to IEs defined in clause 6 do not apply;

- Based on the received AS configuration, the target node can indicate the delta (difference) as compared to the current AS configuration to the UE. The fields *newUE-Identity* and *t304* in *ReconfigurationWithSync* are always included by the target node, i.e. they are not used for delta configuration purpose to UE.

For fields in *CG-Config* and *CG-ConfigInfo* listed below, absence of the field means that the receiver maintains the values informed via the previous message. Note that every time there is a change in the configuration covered by a listed field, the MN or SN shall include the field and it shall provide the full configuration provided by that field unless stated otherwise. Otherwise, if there is no change, the field can be omitted:

- *configRestrictInfo*;

- *gapPurpose;*

- *measGapConfig* (for which delta signaling applies);

- *measGapConfigFR2* (for which delta signaling applies);

- *measResultCellListSFTD*;

- *measResultSFTD-EUTRA*;
- *sftdFrequencyList-EUTRA*;
- *sftdFrequencyList-NR;*
- *ue-CapabilityInfo;*
- *servFrequenciesMN-NR;*
- *musim-GapConfigInfo-r18;*
- *musim-CapRestrictionInfo-r18;*
- *ltm-ReferenceConfigurationSCG-r19;*
- *ltm-UE-MeasuredTA-ID-r19;*
- *ltm-ReferenceConfigurationMCG-r19.*

For other fields in CG-Config and CG-ConfigInfo, the sender shall always signal the appropriate value even if same as indicated in the previous inter-node message, unless explicitly stated otherwise.

11.3 Inter-node RRC information element definitions

– *L1-MeasConfigNRDC*

The IE *L1-MeasConfigNRDC* is used to indicate or request a maximum value that can be used by the SN in NR-DC to configure L1 measurement related to LTM at the SCG. Each value is equal to or lower than the value of the corresponding field in the UE capability, as reported by the UE, unless specified otherwise. The value indicated by each field is applicable to all BCs within the field *allowedBC-ListMRDC*.

-- ASN1STOP
```

***L1-MeasConfigNRDC* field descriptions**
maxCellsSSB-L1-MeasInterFreqSCG Indicates the maximum number of RRC configured LTM candidate cells inter-frequency L1 measurement.
maxCellsSSB-L1-MeasIntraFreqSCG, maxCellL1-CSI-RS-MeasIntraFreqSCG Indicates the maximum number of RRC configured LTM candidate cells for intra-frequency L1 measurement.
maxCellsL1-MeasNoGapSCG Indicates the maximum number of neighbour cells UE can measure per frequency layer for intra-frequency or inter-frequency L1 measurements without measurement gaps.
maxCellsL1-MeasWithGapSCG Indicates the maximum number of neighbour cells UE can measure per frequency layer for inter-frequency L1 measurements with measurement gaps.
maxL1-MeasNoGapSCG Indicates the maximum number of frequency layers UE can measure for intra- and inter-frequency L1 measurements without measurement gaps.
maxL1-MeasWithGapSCG Indicates the maximum number of frequency layers UE can measure for inter-frequency L1 measurements with measurement gaps.
maxReportConfigsAperiodicSSB, maxReportConfigsAperiodicCSI-RS, maxReportConfigsAperiodicSP-CSI-RS Indicates the maximum number of aperiodic LTM CSI report configurations.
maxReportConfigsPeriodicSSB, maxReportConfigsPeriodicCSI-RS Indicates the maximum number of periodic LTM CSI report configurations.
maxReportConfigsSemiPersistentSSB, maxReportConfigsSemiPersistentCSI-RS, maxReportConfigsSemiPersistentSP-CSI-RS Indicates the maximum number of semi-persistent LTM CSI report configurations.
maxResourcesL1-MeasSCG-CSI-RS Indicates the maximum number of max number of CSI-RS resources for L1-RSRP measurement that UE can measure within a slot.
maxSSBsL1-MeasNoGapSCG, maxSSBsL1-MeasNoGapSCGExt Indicates the maximum number of SSB resources UE can measure per frequency layer for intra-frequency or inter-frequency L1 measurements without measurement gaps. If the field *maxSSBsL1-MeasNoGapSCGExt* is included, the field *maxSSBsL1-MeasNoGapSCG* is not present.
maxSSBsL1-MeasWithGapSCG Indicates the maximum number of SSB resources UE can measure per frequency layer for inter-frequency L1 measurements with measurement gaps.
maxTotalCellsL1-MeasNoGapSCG Indicates the maximum total number of cells, including serving cells and neighboring cells, across all frequency layers of intra-frequency and inter-frequency L1 measurements, UE can measure without measurement gaps.
maxTotalSSBsL1-MeasNoGapSCG Indicates the maximum total number of SSB resources, including serving cells and neighboring cells, across all frequency layers of intra-frequency and inter-frequency L1 measurements, UE can measure without measurement gaps.

– *LTM-ResourceConfigNRDC*

The IE *LTM-ResourceConfigNRDC* is used to indicate or request a maximum value that can be used by the SN in NR-DC to configure LTM related configuration at the SCG e.g., number of TCI states to be configured and activated, and number of LTM candidates on which to trigger the early UL synchronization. Each value is equal to or lower than the value of the corresponding field in the UE capability, as reported by the UE, unless specified otherwise. The value indicated by each field is applicable to all BCs within the field *allowedBC-ListMRDC*.

LTM-ResourceConfigNRDC field descriptions

maxActivatedDL-TCI-States
Indicates the maximum number of MAC CE activated LTM DL TCI states.
maxActivatedJointTCI-States
Indicates the maximum number of MAC CE activated joint LTM TCI states.
maxActivatedUL-TCI-States
Indicates the maximum number of MAC CE activated LTM UL TCI states.
maxCellsJointTCI
Indicates the maximum number of configured cells for joint LTM TCI state(s).
maxCellsTA-Meas
Indicates the maximum number of candidate cells for TA acquisition based on PDCCH ordered CFRA procedure before receiving cell switch command MAC-CE.
maxCellsTCI
Indicates the maximum number of configured cells for separate DL/UL LTM TCI state(s).
maxConfigCells
Indicates the maximum number of LTM candidate configuration(s) for which the UE can perform early ASN.1 decoding and validity check.
maxConfigDL-TCI-States
Indicates the maximum number of configured separate DL LTM TCI state(s).
maxConfigJointTCI-States
Indicates the maximum number of configured joint LTM TCI state(s).
maxConfigUL-TCI-States
Indicates the maximum number of configured separate UL LTM TCI state(s).
maxStoredConfigCells
Indicates the maximum number of serving cell(s) and candidate cell(s), including serving SpCell(s), serving SCell(s) in SCG, SpCell in LTM candidate configurations and SCell(s) in LTM candidate configurations for SCG.

– *ResourceConfigNRDC*

The IE is used to indicate or request the maximum values that can be used by the SCG in NR-DC, with each value equal to or lower than the value of the corresponding field in the UE capability, as reported by the UE, unless specified otherwise.

```

***ResourceConfigNRDC* field descriptions**
fr1-ResourceConfig, fr2-ResourceConfig Indicates the maximum number of resources that SCG is allowed to configure for FR1/FR2, respectively.
maxNumberResAcrossCC-AcrossFR Indicates the maximum number of configured CSI-RS resources. Corresponds to the UE capability *maxNumberResAcrossCC-AcrossFR-r16* in *maxTotalResourcesForAcrossFreqRanges-r16*.

***ResourceConfigPerFR* field descriptions**
bm-MaxNumberAperiodicCSI-RS-Resource Indicates the maximum number of aperiodic CSI-RS resources that the SCG is allowed to configure for the UE to measure L1-RSRP. Corresponds to the UE capability *maxNumberAperiodicCSI-RS-Resource* in *beamManagementSSB-CSI-RS*.
bm-MaxNumberCSI-RS-Resource Indicates the maximum total number of NZP-CSI-RS resources that can be configured for the UE to measure L1-RSRP. Corresponds to the UE capability *maxNumberCSI-RS-Resource* in *beamManagementSSB-CSI-RS*.
cg-MaxNumberConfigsAllCC Indicates the maximum number of active configured grant configurations. Corresponds to the UE capability *maxNumberConfigsAllCC-r16* in *activeConfiguredGrant-r16*.
maxNumberCSI-RS-BFD Indicates the maximal number of different CSI-RS resources for the UE to monitor PDCCH quality. Corresponds to the UE capability *maxNumberCSI-RS-BFD*.
maxNumberCSI-RS-SSB-CBD Indicates the maximal number of different CSI-RS (and/or SSB) resources for new beam identifications. Corresponds to the UE capability *maxNumberCSI-RS-SSB-CBD*.
maxNumberSSB-BFD Indicates the maximal number of different SSBs for the UE to monitor PDCCH quality. Corresponds to the UE capability *maxNumberSSB-BFD*.
sps-MaxNumberConfigsAllCC Indicates the maximum number of SPS configurations. Corresponds to the UE capability *maxNumberConfigsAllCC-r16* in *sps-r16*.
trs-MaxConfResourceSetsAllCC Indicates the maximum configured CSI-RS for tracking (i.e. TRS) resource sets. Corresponds to the UE capability *maxConfiguredResourceSetsAllCC* in *csi-RS-ForTracking*.

11.4 Inter-node RRC multiplicity and type constraint values

12 Processing delay requirements for RRC procedures

The UE performance requirements for RRC procedures are specified in the following tables. The performance requirement is expressed as the time in [ms] from the end of reception of the network -> UE message on the UE physical layer up to when the UE shall be ready for the reception of uplink grant for the UE -> network response message with no access delay other than the TTI-alignment (e.g. excluding delays caused by scheduling, the random access procedure or physical layer synchronisation).

Figure 12.1-1: Illustration of RRC procedure delay

Table 12.1-1: UE performance requirements for RRC procedures for UEs

Procedure title:	Network -> UE	UE -> Network	Value [ms]	Notes
RRC Connection Control Procedures				
RRC reconfiguration	*RRCReconfiguration*	*RRCReconfigurationComplete*	10	
RRC reconfiguration (scell addition/release)	*RRCReconfiguration*	*RRCReconfigurationComplete*	16	
RRC reconfiguration (LTE/NR SCG establishment/ modification/ release)	*RRCReconfiguration*	*RRCReconfigurationComplete*	16	
RRC reconfiguration (Intra-NR mobility with LTE/NR SCG establishment/ modification/ release)	*RRCReconfiguration*	*RRCReconfigurationComplete*	16	
RRC reconfiguration	*DLDedicatedMessageSegment*	*RRCReconfigurationComplete*	16+(Nseg -1)*10	Nseg is number of RRC segments
RRC reconfiguration (configurations subject to applicability determination procedure)	*RRCReconfiguration*	*RRCReconfigurationComplete*	16	
RRC setup	*RRCSetup*	*RRCSetupComplete*	10	
RRC Release	*RRCRelease*		NA	
RRC re-establishment	*RRCReestablishment*	*RRCReestablishmentComplete*	10	

Procedure title:	Network -> UE	UE -> Network	Value [ms]	Notes
RRC resume	*RRCResume*	*RRCResumeComplete*	6 or 10	Value=6 applies for a UE supporting reduced CP latency for the case of RRCResume message only including MAC and PHY configuration, reestablishPDCP and reestablishRLC for SRB2, multicast MRB(s) and DRB(s), and no DRX, SPS, configured grant, CA or MIMO re-configuration will be triggered by this message. Further, the UL grant for transmission of *RRCResumeComplete* and the data is transmitted over common search space with DCI format 0_0. In this scenario, the RRC procedure delay [ms] can extend beyond the reception of the UL grant, up to 7 ms. For other cases, Value = 10 applies.
RRC resume (MCG SCell addition/restoration/release)	*RRCResume*	*RRCResumeComplete*	16	
RRC resume (SCG establishment/ restoration/release)	*RRCResume*	*RRCResumeComplete*	16	
RRC resume	*DLDedicatedMessageSegment*	*RRCResumeComplete*	16+(Nseg -1)*10	Nseg is number of RRC segments

Annex A (informative): Guidelines mainly on use of ASN.1

A.1 Introduction

The following clauses contain guidelines for the specification of RRC protocol data units (PDUs) with ASN.1.

A.2 Procedural specification

A.2.1 General principles

The procedural specification provides an overall high level description regarding the UE behaviour in a particular scenario.

It should be noted that most of the UE behaviour associated with the reception of a particular field is covered by the applicable parts of the PDU specification. The procedural specification may also include specific details of the UE behaviour upon reception of a field, but typically this should be done only for cases that are not easy to capture in the PDU clause e.g. general actions, more complicated actions depending on the value of multiple fields.

Likewise, the procedural specification need not specify the UE requirements regarding the setting of fields within the messages that are sent to the network i.e. this may also be covered by the PDU specification.

A.2.2 More detailed aspects

The following more detailed conventions should be used:

- Bullets:
  - Capitals should be used in the same manner as in other parts of the procedural text i.e. in most cases no capital applies since the bullets are part of the sentence starting with 'The UE shall:'
  - All bullets, including the last one in a clause, should end with a semi-colon i.e. an ';.
- Conditions:
  - Whenever multiple conditions apply, a semi-colon should be used at the end of each conditions with the exception of the last one, i.e. as in 'if cond1, or cond2.

A.3 PDU specification

A.3.1 General principles

A.3.1.1 ASN.1 clauses

The RRC PDU contents are formally and completely described using abstract syntax notation (ASN.1), see X.680 [6], X.681 [7].

The complete ASN.1 code is divided into a number of ASN.1 clauses in the specifications. In order to facilitate the extraction of the complete ASN.1 code from the specification, each ASN.1 clause begins with the following:

- a first text paragraph consisting entirely of an *ASN.1 start tag*, which consists of a double hyphen followed by a single space and the text string "ASN1START" (in all upper case letters);
- a second text paragraph consisting entirely of a *block start tag* is included, which consists of a double hyphen followed by a single space and the text string "TAG-NAME-START" (in all upper case letters), where the "NAME" refers to the main name of the paragraph (in all upper-case letters).

Similarly, each ASN.1 clause ends with the following:

- a first text paragraph consisting entirely of a *blockstop tag*, which consists of a double hyphen followed by a single space and the text string "TAG-NAME-STOP" (in all upper-case letters), where the "NAME" refers to the main name of the paragraph (in all upper-case letters);
- a second text paragraph consisting entirely of an *ASN.1 stop tag*, which consists of a double hyphen followed by a singlespace and the text "ASN1STOP" (in all upper case letters).

This results in the following tags:

```
-- ASN1START
-- TAG-NAME-START

-- TAG-NAME-STOP
-- ASN1STOP
```

The text paragraphs containing either of the start and stop tags should not contain any ASN.1 code significant for the complete description of the RRC PDU contents. The complete ASN.1 code may be extracted by copying all the text paragraphs between an ASN.1 start tag and the following ASN.1 stop tag in the order they appear, throughout the specification.

NOTE: A typical procedure for extraction of the complete ASN.1 code consists of a first step where the entire RRC PDU contents description (ultimately the entire specification) is saved into a plain text (ASCII) file format, followed by a second step where the actual extraction takes place, based on the occurrence of the ASN.1 start and stop tags.

A.3.1.2 ASN.1 identifier naming conventions

The naming of identifiers (i.e., the ASN.1 field and type identifiers) should be based on the following guidelines:

- Message (PDU) identifiers should be ordinary mixed case without hyphenation. These identifiers, *e.g.*, the *RRCConnectionModificationCommand*, should be used for reference in the procedure text. Abbreviations should be avoided in these identifiers and abbreviated forms of these identifiers should not be used.

- Type identifiers other than PDU identifiers should be ordinary mixed case, with hyphenation used to set off acronyms only where an adjacent letter is a capital, *e.g.*, *EstablishmentCause, SelectedPLMN* (not *Selected-PLMN*, since the "d" in "Selected" is lowercase), *InitialUE-Identity* and *MeasSFN-SFN-TimeDifference*.

- Field identifiers shall start with a lowercase letter and use mixed case thereafter, *e.g., establishmentCause*. If a field identifier begins with an acronym (which would normally be in upper case), the entire acronym is lowercase (*plmn-Identity*, not *pLMN-Identity*). The acronym is set off with a hyphen (*ue-Identity*, not *ueIdentity*), in order to facilitate a consistent search pattern with corresponding type identifiers.

- Identifiers should convey the meaning of the identifier and should avoid adding unnecessary postfixes (e.g. abstractions like 'Info') for the name.

- Identifiers that are likely to be keywords of some language, especially widely used languages, such as C++ or Java, should be avoided to the extent possible.

- Identifiers, other than PDU identifiers, longer than 25 characters should be avoided where possible. It is recommended to use abbreviations, which should be done in a consistent manner i.e. use 'Meas' instead of 'Measurement' for all occurrences. Examples of typical abbreviations are given in table A.3.1.2.1-1 below.

- *For future extension:* When an extension is introduced a suffix is added to the identifier of the concerned ASN.1 field and/or type. A suffix of the form "-rX" is used, with X indicating the release, for ASN.1 fields or types introduced in a later release (i.e. a release later than the original/first release of the protocol) as well as for ASN.1 fields or types for which a revision is introduced in a later release replacing a previous version, *e.g.*, *Foo-r9* for the Rel-9 version of the ASN.1 type *Foo*. A suffix of the form "-rXb" is used for the first revision of a field that it appears in the same release (X) as the original version of the field, "-rXc" for a second intra-release revision and so on. A suffix of the form "-vXYZ" is used for ASN.1 fields or types that only are an extension of a corresponding earlier field or type (see clause A.4), e.g., *AnElement-v10b0* for the extension of the ASN.1 type *AnElement* introduced in version 10.11.0 of the specification. A number *0...9, 10, 11, etc.* is used to represent the first part of the version number, indicating the release of the protocol. Lower case letters *a, b, c, etc.* are used to represent the second (and third) part of the version number if they are greater than 9. In the procedural specification, in field descriptions as well as in headings suffices are not used, unless there is a clear need to distinguish the extension from the original field.

- More generally, in case there is a need to distinguish different variants of an ASN.1 field or IE, a suffix should be added at the end of the identifiers e.g. *MeasObjectUTRA, ConfigCommon*. When there is no particular need to distinguish the fields (e.g. because the field is included in different IEs), a common field identifier name may be used. This may be attractive e.g. in case the procedural specification is the same for the different variants.

- It should be avoided to use field identifiers with the same name within the elements of a CHOICE, including using a CHOICE inside a SEQUENCE (to avoid certain compiler errors).

Table A.3.1.2-1: Examples of typical abbreviations used in ASN.1 identifiers

Abbreviation	Abbreviated word
Config	Configuration
DL	Downlink
Ext	Extension
Freq	Frequency
Id	Identity
Ind	Indication
Meas	Measurement
MIB	MasterInformationBlock
Neigh	Neighbour(ing)
Param(s)	Parameter(s)
Phys	Physical
PCI	Physical Cell Id
Proc	Process
Reconfig	Reconfiguration
Reest	Re-establishment
Req	Request
Rx	Reception
Sched	Scheduling
SIB	SystemInformationBlock
Sync	Synchronisation
Thr	Threshold
Tx	Transmission
UL	Uplink

NOTE: The table A.3.1.2.1-1 is not exhaustive. Additional abbreviations may be used in ASN.1 identifiers when needed.

A.3.1.3 Text references using ASN.1 identifiers

A text reference into the RRC PDU contents description from other parts of the specification is made using the ASN.1 field identifier of the referenced type. The ASN.1 field and type identifiers used in text references should be in the *italic font style*. The "do not check spelling and grammar" attribute in Word should be set. Quotation marks (i.e., "") should not be used around the ASN.1 field or type identifier.

A reference to an RRC PDU should be made using the corresponding ASN.1 field identifier followed by the word "message", e.g., a reference to the *RRCRelease* message.

A reference to a specific part of an RRC PDU, or to a specific part of any other ASN.1 type, should be made using the corresponding ASN.1 field identifier followed by the word "field", e.g., a reference to the *prioritisedBitRate* field in the example below.

```
-- /example/ ASN1START
```

```
LogicalChannelConfig ::=          SEQUENCE {
   ul-SpecificParameters             SEQUENCE {
      priority                        Priority,
      prioritisedBitRate                PrioritisedBitRate,
      bucketSizeDuration                BucketSizeDuration,
      logicalChannelGroup               INTEGER (0..3)
   }      OPTIONAL
}

-- ASN1STOP
```

NOTE: All the ASN.1 start tags in the ASN.1 clauses, used as examples in this annex to the specification, are deliberately distorted, in order not to include them when the ASN.1 description of the RRC PDU contents is extracted from the specification.

A reference to a specific type of information element should be made using the corresponding ASN.1 type identifier preceded by the acronym "IE", e.g., a reference to the IE *LogicalChannelConfig* in the example above.

References to a specific type of information element should only be used when those are generic, i.e., without regard to the particular context wherein the specific type of information element is used. If the reference is related to a particular context, e.g., an RRC PDU type (message) wherein the information element is used, the corresponding field identifier in that context should be used in the text reference.

A reference to a specific value of an ASN.1 field should be made using the corresponding ASN.1 value without using quotation marks around the ASN.1 value, e.g., 'if the *status* field is set to value *true*'.

A.3.2 High-level message structure

Within each logical channel type, the associated RRC PDU (message) types are alternatives within a CHOICE, as shown in the example below.

```
-- /example/ ASN1START

DL-DCCH-Message ::= SEQUENCE {
   message              DL-DCCH-MessageType
}

DL-DCCH-MessageType ::= CHOICE {
   c1                   CHOICE {
      dlInformationTransfer               DLInformationTransfer,
      handoverFromEUTRAPreparationRequest   HandoverFromEUTRAPreparationRequest,
      mobilityFromEUTRACommand             MobilityFromEUTRACommand,
      rrcConnectionReconfiguration          RRCConnectionReconfiguration,
      rrcConnectionRelease                RRCConnectionRelease,
      securityModeCommand                 SecurityModeCommand,
      ueCapabilityEnquiry                 UECapabilityEnquiry,
      spare1 NULL
   },
   messageClassExtension   SEQUENCE {}
```

```
}

-- ASN1STOP
```

A nested two-level CHOICE structure is used, where the alternative PDU types are alternatives within the inner level *c1* CHOICE.

Spare alternatives (i.e., *spare1* in this case) may be included within the *c1* CHOICE to facilitate future extension. The number of such spare alternatives should not extend the total number of alternatives beyond an integer-power-of-two number of alternatives (i.e., eight in this case).

Further extension of the number of alternative PDU types is facilitated using the *messageClassExtension* alternative in the outer level CHOICE.

A.3.3 Message definition

Each PDU (message) type is specified in an ASN.1 clause similar to the one shown in the example below.

```
-- /example/ ASN1START

RRCConnectionReconfiguration ::=   SEQUENCE {
   rrc-TransactionIdentifier         RRC-TransactionIdentifier,
   criticalExtensions               CHOICE {
      c1                             CHOICE{
         rrcConnectionReconfiguration-r8    RRCConnectionReconfiguration-r8-IEs,
         spare3 NULL, spare2 NULL, spare1 NULL
      },
      criticalExtensionsFuture          SEQUENCE {}
   }
}

RRCConnectionReconfiguration-r8-IEs ::= SEQUENCE {
   -- Enter the IEs here.
   ...
}

-- ASN1STOP
```

Hooks for *critical* and *non-critical* extension should normally be included in the PDU type specification. How these hooks are used is further described in clause A.4.

Critical extensions are characterised by a redefinition of the PDU contents and need to be governed by a mechanism for protocol version agreement between the encoder and the decoder of the PDU, such that the encoder is prevented from sending a critically extended version of the PDU type, which is not comprehended by the decoder.

Critical extension of a PDU type is facilitated by a two-level CHOICE structure, where the alternative PDU contents are alternatives within the inner level *c1* CHOICE. Spare alternatives (i.e., *spare3* down to *spare1* in this case) may be included within the *c1* CHOICE. The number of spare alternatives to be included in the original PDU specification should be decided case by case, based on the expected rate of critical extension in the future releases of the protocol.

Further critical extension, when the spare alternatives from the original specifications are used up, is facilitated using the *criticalExtensionsFuture* in the outer level CHOICE.

In PDU types where critical extension is not expected in the future releases of the protocol, the inner level *c1* CHOICE and the spare alternatives may be excluded, as shown in the example below.

```
-- /example/ ASN1START

RRCConnectionReconfigurationComplete ::= SEQUENCE {
   rrc-TransactionIdentifier         RRC-TransactionIdentifier,
   criticalExtensions               CHOICE {
      rrcConnectionReconfigurationComplete-r8
                                    RRCConnectionReconfigurationComplete-r8-IEs,
      criticalExtensionsFuture          SEQUENCE {}
   }
}

RRCConnectionReconfigurationComplete-r8-IEs ::= SEQUENCE {
   -- Enter the fields here.
   ...
}

-- ASN1STOP
```

Non-critical extensions are characterised by the addition of new information to the original specification of the PDU type. If not comprehended, a non-critical extension may be skipped by the decoder, whilst the decoder is still able to complete the decoding of the comprehended parts of the PDU contents.

Non-critical extensions at locations other than the end of the message or other than at the end of a field contained in a BIT or OCTET STRING are facilitated by use of the ASN.1 extension marker "...". The original specification of a PDU type should normally include the extension marker at the end of the sequence of information elements contained.

Non-critical extensions at the end of the message or at the end of a field that is contained in a BIT or OCTET STRING may be facilitated by use of an empty sequence that is marked OPTIONAL e.g. as shown in the following example:

```
-- /example/ ASN1START

RRCMessage-r8-IEs ::=               SEQUENCE {
   field1                           InformationElement1,
   field2                           InformationElement2,

   nonCriticalExtension                SEQUENCE {}                OPTIONAL
}

-- ASN1STOP
```

The ASN.1 clause specifying the contents of a PDU type may be followed by a *field description* table where a further description of, e.g., the semantic properties of the fields may be included. The general format of this table is shown in the example below. The field description table is absent in case there are no fields for which further description

needs to be provided e.g. because the PDU does not include any fields, or because an IE is defined for each field while there is nothing specific regarding the use of this IE that needs to be specified.

***%PDU-TypeIdentifier%* field descriptions**
%field identifier% Field description.
%field identifier% Field description.

The field description table has one column. The header row shall contain the ASN.1 type identifier of the PDU type.

The following rows are used to provide field descriptions. Each row shall include a first paragraph with a *field identifier* (in ***bold and italic*** font style) referring to the part of the PDU to which it applies. The following paragraphs at the same row may include (in regular font style), e.g., semantic description, references to other specifications and/or specification of value units, which are relevant for the particular part of the PDU.

The parts of the PDU contents that do not require a field description shall be omitted from the field description table.

A.3.4 Information elements

Each IE (information element) type is specified in an ASN.1 clause similar to the one shown in the example below.

```
-- /example/ ASN1START

PRACH-ConfigSIB ::=              SEQUENCE {
   rootSequenceIndex                INTEGER (0..1023),
   prach-ConfigInfo                 PRACH-ConfigInfo
}

PRACH-Config ::=                 SEQUENCE {
   rootSequenceIndex                INTEGER (0..1023),
   prach-ConfigInfo                 PRACH-ConfigInfo                OPTIONAL    -- Need N
}

PRACH-ConfigInfo ::=             SEQUENCE {
   prach-ConfigIndex                ENUMERATED {ffs},
   highSpeedFlag                   ENUMERATED {ffs},
   zeroCorrelationZoneConfig          ENUMERATED {ffs}
}

-- ASN1STOP
```

IEs should be introduced whenever there are multiple fields for which the same set of values apply. IEs may also be defined for other reasons e.g. to break down a ASN.1 definition in to smaller pieces.

A group of closely related IE type definitions, like the IEs *PRACH-ConfigSIB* and *PRACH-Config* in this example, are preferably placed together in a common ASN.1 clause. The IE type identifiers should in this case have a common base, defined as the *generic type identifier*. It may be complemented by a suffix to distinguish the different variants. The "*PRACH-Config*" is the generic type identifier in this example, and the "*SIB*" suffix is added to distinguish the variant. The clause heading and generic references to a group of closely related IEs defined in this way should use the generic type identifier.

The same principle should apply if a new version, or an extension version, of an existing IE is created for *critical* or *non-critical* extension of the protocol (see clause A.4). The new version, or the extension version, of the IE is included in the same ASN.1 clause defining the original. A suffix is added to the type identifier, using the naming conventions defined in clause A.3.1.2, indicating the release or version of the where the new version, or extension version, was introduced.

Local IE type definitions, like the IE *PRACH-ConfigInfo* in the example above, may be included in the ASN.1 clause and be referenced in the other IE types defined in the same ASN.1 clause. The use of locally defined IE types should be encouraged, as a tool to break up large and complex IE type definitions. It can improve the readability of the code. There may also be a benefit for the software implementation of the protocol end-points, as these IE types are typically provided by the ASN.1 compiler as independent data elements, to be used in the software implementation.

An IE type defined in a local context, like the IE *PRACH-ConfigInfo*, should not be referenced directly from other ASN.1 clauses in the RRC specification. An IE type which is referenced in more than one ASN.1 clause should be defined in a separate clause, with a separate heading and a separate ASN.1 clause (possibly as one in a set of closely related IE types, like the IEs *PRACH-ConfigSIB* and *PRACH-Config* in the example above). Such IE types are also referred to as 'global IEs'.

NOTE: Referring to an IE type, that is defined as a local IE type in the context of another ASN.1 clause, does not generate an ASN.1 compilation error. Nevertheless, using a locally defined IE type in that way makes the IE type definition difficult to find, as it would not be visible at an outline level of the specification. It should be avoided.

The ASN.1 clause specifying the contents of one or more IE types, like in the example above, may be followed by a *field description* table, where a further description of, e.g., the semantic properties of the fields of the information elements may be included. This table may be absent, similar as indicated in clause A.3.3 for the specification of the PDU type. The general format of the *field description* table is the same as shown in clause A.3.3 for the specification of the PDU type.

A.3.5 Fields with optional presence

A field with optional presence may be declared with the keyword DEFAULT. It identifies a default value to be assumed, if the sender does not include a value for that field in the encoding:

```
-- /example/ ASN1START

PreambleInfo ::=                SEQUENCE {
    numberOfRA-Preambles            INTEGER (1..64)                 DEFAULT 1,
    ...
}

-- ASN1STOP
```

Alternatively, a field with optional presence may be declared with the keyword OPTIONAL. It identifies a field for which a value can be omitted. The omission carries semantics, which is different from any normal value of the field:

```
-- /example/ ASN1START

PRACH-Config ::=                SEQUENCE {
    rootSequenceIndex               INTEGER (0..1023),
    prach-ConfigInfo                PRACH-ConfigInfo                OPTIONAL    -- Need N
}

-- ASN1STOP
```

The semantics of an optionally present field, in the case it is omitted, should be indicated at the end of the paragraph including the keyword OPTIONAL, using a short comment text with a need code. The need code includes the keyword "Need", followed by one of the predefined semantics tags (S, M, N or R) defined in clause 6.1. If the semantics tag S is used, the semantics of the absent field are further specified either in the field description table following the ASN.1 clause, or in procedure text.

The addition of OPTIONAL keywords for capability groups is based on the following guideline. If there is more than one field in the lower level IE, then OPTIONAL keyword is added at the group level. If there is only one field in the lower level IE, OPTIONAL keyword is not added at the group level.

A.3.6 Fields with conditional presence

A field with conditional presence is declared with the keyword OPTIONAL. In addition, a short comment text shall be included at the end of the paragraph including the keyword OPTIONAL. The comment text includes the keyword "Cond", followed by a condition tag associated with the field ("UL" in this example):

```
-- /example/ ASN1START

LogicalChannelConfig ::=          SEQUENCE {
    ul-SpecificParameters            SEQUENCE {
        priority                      INTEGER (0),
        ...
    }       OPTIONAL                                                -- Cond UL
}

-- ASN1STOP
```

When conditionally present fields are included in an ASN.1 clause, the field description table after the ASN.1 clause shall be followed by a *conditional presence* table. The conditional presence table specifies the conditions for including the fields with conditional presence in the particular ASN.1 clause.

Conditional presence	Explanation
UL	Specification of the conditions for including the field associated with the condition tag = "UL". Semantics in case of optional presence under certain conditions may also be specified.

The conditional presence table has two columns. The first column (heading: "Conditional presence") contains the condition tag (in *italic* font style), which links the fields with a condition tag in the ASN.1 clause to an entry in the table. The second column (heading: "Explanation") contains a text specification of the conditions and requirements for the

presence of the field. The second column may also include semantics, in case of an optional presence of the field, under certain conditions i.e. using the same predefined tags as defined for optional fields in A.3.5.

Conditional presence should primarily be used when presence of a field depends on the presence and/or value of other fields within the same message. If the presence of a field depends on whether another feature/function has been configured, while this function can be configured independently e.g. by another message and/or at another point in time, the relation is best reflected by means of a statement in the field description table.

If the ASN.1 clause does not include any fields with conditional presence, the conditional presence table shall not be included.

Whenever a field is only applicable in specific cases e.g. TDD, use of conditional presence should be considered.

A.3.7 Guidelines on use of lists with elements of SEQUENCE type

Where an information element has the form of a list (the SEQUENCE OF construct in ASN.1) with the type of the list elements being a SEQUENCE data type, an information element shall be defined for the list elements even if it would not otherwise be needed.

For example, a list of PLMN identities with reservation flags is defined as in the following example:

```
-- /example/ ASN1START

PLMN-IdentityInfoList ::=         SEQUENCE (SIZE (1..6)) OF PLMN-IdentityInfo

PLMN-IdentityInfo ::=             SEQUENCE {
    plmn-Identity                   PLMN-Identity,
    cellReservedForOperatorUse        ENUMERATED {reserved, notReserved}
}

-- ASN1STOP
```

rather than as in the following (bad) example, which may cause generated code to contain types with unpredictable names:

```
-- /bad example/ ASN1START

PLMN-IdentityList ::=               SEQUENCE (SIZE (1..6)) OF SEQUENCE {
    plmn-Identity                     PLMN-Identity,
    cellReservedForOperatorUse          ENUMERATED {reserved, notReserved}
}

-- ASN1STOP
```

A.3.8 Guidelines on use of parameterised SetupRelease type

The usage of the parameterised *SetupRelease* type is like a function call in programming languages where the element type parameter is passed as a parameter. The parameterised type only implies a textual change in abstract syntax where all references to the parameterised type are replaced by the compiler with the release/setup choice. Two examples of the usage are shown below:

```
-- /example/ ASN1START

RRCMessage-rX-IEs ::= SEQUENCE {
    field-rX            SetupRelease { IE-rX }              OPTIONAL,     --  Need M
    ...
}

RRCMessage-rX-IEs ::= SEQUENCE {
    field-rX            SetupRelease { Element-rX }
}                                                       OPTIONAL,      -- Need M

Element-rX ::= SEQUENCE {
    field1-rX               IE1-rX,
    field2-rX               IE2-rX                        OPTIONAL       -- Need N
}                                                          OPTIONAL,   -- Need M

-- /example/ ASN1STOP
```

The *SetupRelease* is always be used with only named IEs, i.e. the example below is not allowed:

```
-- /example/ ASN1START

RRCMessage-rX-IEs ::= SEQUENCE {
    field-rX      SetupRelease { SEQUENCE {   -- Unnamed SEQUENCEs are not allowed!
          field1-rX               IE1-rX,
          field2-rX               IE2-rX                    OPTIONAL       -- Need N
       }
    }                                                        OPTIONAL,   -- Need M
}

-- /example/ ASN1STOP
```

Typically, a field defined using the parameterized *SetupRelease* type does not require procedural or field description text that refers to the *setup* or *release* values. If such a field anyway requires procedural text for specific actions, the field is referred to using the values defined for the type itself, namely, "setup" and "release". For example, procedural text for field-rX above could be as follows:

1> if *field-rX* is set to "setup":

2> do something;

1> else (*field-rX* is set to "release"):

2> release *field-rX* (if appropriate).

A.3.9 Guidelines on use of ToAddModList and ToReleaseList

In order to benefit from delta signalling when modifying lists with many and/or large elements, so-called add/mod- and release- lists should be used. Instead of a single list containing all elements of the list, the ASN.1 provides two lists. One list is used to convey the actual elements that are to be added to the list or modified in the list. The second list conveys only the identities (IDs) of the list elements that are to be released from the list. In other words, the ASN.1 defines only means to signal modifications to a list maintained in the receiver (typically the UE). An example is provided below:

```
-- /example/ ASN1START

AnExampleIE ::=       SEQUENCE {
   elementsToAddModList   SEQUENCE (SIZE (1..maxNrofElements)) OF Element                          OPTIONAL,   --  Need N
   elementsToReleaseList   SEQUENCE (SIZE (1..maxNrofElements)) OF ElementId                        OPTIONAL,   --  Need N
   ...
}

Element ::=           SEQUENCE {
   elementId            ElementId,
   aField               INTEG ER (0..16777215),
   anotherField          OCTET STRING,
   ...
}

ElementId ::=         INTEGER (0..maxNrofElements-1)

maxNrofElements       INTEGER ::= 50
maxNrofElements-1     INTEGER ::= 49

-- /example/ ASN1STOP
```

As can be seen, the elements of the list must contain an identity (INTEGER) that identifies the elements unambiguously upon addition, modification and removal. It is recommended to define an IE for that identifier (here ElementId) so that it can be used both for a field inside the element as well as in the *elementsToReleaseList*.

Both lists should be made OPTIONAL and flagged as "Need N". The need code reflects that the UE does not maintain the received lists as such but rather updates its configuration using the information therein. In other words, it is not possible to provide via delta signalling an update to a previously signalled *elementsToAddModList* or elementsToReleaseList (which Need M would imply). The update is always in relation to the UE's internal configuration.

Note that the release of a field (a list element as well as any other field) releases all its sub-fields (sub-fields configured by elementsToAddModList and any other sub-field).

If no procedural text is provided for a set of ToAddModList and ToReleaseList, the following generic procedure applies:

The UE shall:

1> for each *ElementId* in the *elementsToReleaseList*,:

2> if the current UE configuration includes an *Element* with the given *ElementId*:

3> release the *Element* from the current UE configuration;

1> for each *Element* in the *elementsToAddModList*:

2> if the current UE configuration includes an *Element* with the given *ElementId*:

3> modify the configured *Element* in accordance with the received *Element*;

2> else:

3> add received *Element* to the UE configuration.

A.3.10 Guidelines on use of lists (without ToAddModList and ToReleaseList)

As per clause 6.1.3, when using lists without the ToAddModList and ToReleaseList structure, the contents of the lists are always replaced. To illustrate this, an example is provided below:

```
-- /example/ ASN1START
-- TAG_EXAMPLE_LISTS_START

AnExampleIE ::=       SEQUENCE {
    elementList           SEQUENCE (SIZE (1..maxNrofElements)) OF Element                          OPTIONAL,   --  Need M
    ...,
    [[
    elementListExt-v2030    SEQUENCE (SIZE (1..maxNrofElementsExt)) OF Element                       OPTIONAL,   --  Need M
    ]]
}

Element ::=       SEQUENCE {
    useFeatureX       BOOLEAN,
    aField           INTEGER (0..127)                                                      OPTIONAL,   --  Need M
    anotherField      INTEGER (0..127)                                                      OPTIONAL,   --  Need R
    ...
}

maxNrofElements       INTEGER ::= 8
maxNrofElements-1     INTEGER ::= 7
maxNrofElementsExt    INTEGER ::= 8
maxNrofElementsExt-1  INTEGER ::= 7

-- TAG_EXAMPLE_LISTS_STOP
```

```
-- /example/ ASN1STOP
```

As can be seen, the *elementList* list itself uses Need M, but each list entry *Element* contains mandatory, Need M and Need R fields. If the list is first signalled to UE with 3 entries, and subsequently again with 2 entries, UE shall retain only the latter list, i.e. the list with 2 elements will completely replace the list with 3 elements. That also means that the field *aField* will be treated as if it was newly created, i.e. network must include it if it wishes UE to utilize the field even if it was previously signalled. This also implies that the Need M field (*aField*) will be treated in the same way as the Need R field (*anotherField*), i.e. delta signalling is not applied and the network has to signal the field to ensure UE does not release the value (which is why Need M should not normally be used in the entries of these lists).

A.4 Extension of the PDU specifications

A.4.1 General principles to ensure compatibility

It is essential that extension of the protocol does not affect interoperability i.e. it is essential that implementations based on different versions of the RRC protocol are able to interoperate. In particular, this requirement applies for the following kind of protocol extensions:

- Introduction of new PDU types (i.e. these should not cause unexpected behaviour or damage).
- Introduction of additional fields in an extensible PDUs (i.e. it should be possible to ignore uncomprehended extensions without affecting the handling of the other parts of the message).
- Introduction of additional values of an extensible field of PDUs. If used, the behaviour upon reception of an uncomprehended value should be defined.

It should be noted that the PDU extension mechanism may depend on the logical channel used to transfer the message e.g. for some PDUs an implementation may be aware of the protocol version of the peer in which case selective ignoring of extensions may not be required.

The non-critical extension mechanism is the primary mechanism for introducing protocol extensions i.e. the critical extension mechanism is used merely when there is a need to introduce a 'clean' message version. Such a need appears when the last message version includes a large number of non-critical extensions, which results in issues like readability, overhead associated with the extension markers. The critical extension mechanism may also be considered when it is complicated to accommodate the extensions by means of non-critical extension mechanisms.

A.4.2 Critical extension of messages and fields

The mechanisms to critically extend a message are defined in A.3.3. There are both "outer branch" and "inner branch" mechanisms available. The "outer branch" consists of a CHOICE having the name *criticalExtensions*, with two values, *c1* and *criticalExtensionsFuture*. The *criticalExtensionsFuture* branch consists of an empty SEQUENCE, while the c1 branch contains the "inner branch" mechanism.

The "inner branch" structure is a CHOICE with values of the form "*MessageName-rX-IEs*" (e.g., "*RRCConnectionReconfiguration-r8-IEs*") or "*spareX*", with the spare values having type NULL. The "-rX-IEs" structures contain the *complete* structure of the message IEs for the appropriate release; i.e., the critical extension branch for the Rel-10 version of a message includes all Rel-8 and Rel-9 fields (that are not obviated in the later version), rather than containing only the additional Rel-10 fields.

The following guidelines may be used when deciding which mechanism to introduce for a particular message, i.e. only an 'outer branch', or an 'outer branch' in combination with an 'inner branch' including a certain number of spares:

- For certain messages, e.g. initial uplink messages, messages transmitted on a broadcast channel, critical extension may not be applicable.
- An outer branch may be sufficient for messages not including any fields.
- The number of spares within inner branch should reflect the likelihood that the message will be critically extended in future releases (since each release with a critical extension for the message consumes one of the spare values). The estimation of the critical extension likelihood may be based on the number, size and changeability of the fields included in the message.
- In messages where an inner branch extension mechanism is available, all spare values of the inner branch should be used before any critical extensions are added using the outer branch.

The following example illustrates the use of the critical extension mechanism by showing the ASN.1 of the original and of a later release

```
-- /example/ ASN1START               -- Original release

RRCMessage ::=                      SEQUENCE {
   rrc-TransactionIdentifier            RRC-TransactionIdentifier,
   criticalExtensions                  CHOICE {
      c1                                CHOICE{
         rrcMessage-r8                       RRCMessage-r8-IEs,
         spare3 NULL, spare2 NULL, spare1 NULL
      },
      criticalExtensionsFuture            SEQUENCE {}
   }
}

-- ASN1STOP
```

```
-- /example/ ASN1START               -- Later release

RRCMessage ::=                      SEQUENCE {
   rrc-TransactionIdentifier            RRC-TransactionIdentifier,
   criticalExtensions                    CHOICE {
      c1                                  CHOICE{
         rrcMessage-r8                         RRCMessage-r8-IEs,
         rrcMessage-r10                        RRCMessage-r10-IEs,
         rrcMessage-r11                        RRCMessage-r11-IEs,
         rrcMessage-r14                        RRCMessage-r14-IEs
      },
      later                                 CHOICE {
         c2                                    CHOICE{
            rrcMessage-r16                          RRCMessage-r16-IEs,
            spare7 NULL, spare6 NULL, spare5 NULL, spare4 NULL,
            spare3 NULL, spare2 NULL, spare1 NULL
```

```
        },
        criticalExtensionsFuture             SEQUENCE {}
    }
  }
}

-- ASN1STOP
```

It is important to note that critical extensions may also be used at the level of individual fields i.e. a field may be replaced by a critically extended version. When sending the extended version, the original version may also be included (e.g. original field is mandatory, E-UTRAN is unaware if UE supports the extended version). In such cases, a UE supporting both versions may be required to ignore the original field. The following example illustrates the use of the critical extension mechanism by showing the ASN.1 of the original and of a later release.

```
-- /example/ ASN1START               -- Original release

RRCMessage ::=                      SEQUENCE {
   rrc-TransactionIdentifier            RRC-TransactionIdentifier,
   criticalExtensions                  CHOICE {
      c1                                CHOICE{
         rrcMessage-r8                       RRCMessage-r8-IEs,
         spare3 NULL, spare2 NULL, spare1 NULL
      },
      criticalExtensionsFuture          SEQUENCE {}
   }
}

RRCMessage-rN-IEs ::= SEQUENCE {
   field1-rN                        ENUMERATED {
                                      value1, value2, value3, value4}    OPTIONAL,   -- Need N
   field2-rN                        InformationElement2-rN              OPTIONAL,   -- Need N
   nonCriticalExtension               RRCConnectionReconfiguration-vMxy-IEs   OPTIONAL
}

RRCConnectionReconfiguration-vMxy-IEs ::= SEQUENCE {
   field2-rM                           InformationElement2-rM          OPTIONAL, -- Cond NoField2rN
   nonCriticalExtension                  SEQUENCE {}                   OPTIONAL
}

-- ASN1STOP
```

Conditional presence	Explanation
NoField2rN	The field is optionally present, need N, if field2-rN is absent. Otherwise the field is absent

Finally, it is noted that a critical extension may be introduced in the same release as the one in which the original field was introduced e.g. to correct an essential ASN.1 error. In such cases a UE capability may be introduced, to assist the network in deciding whether or not to use the critical extension.

In the case of list fields (SEQUENCE OF types in ASN.1) using the ToAddMod/ToRelease construction, the use of critical extensions to increase the size of a list should be avoided; that is, replacing the original list field by a new field also used to signal entries previously covered by the original field (i.e. extensions done according to the following example) should be avoided:

```
-- /example/ ASN1START                -- Discouraged example

ContainingStructure ::=               SEQUENCE {
    listElementToAddModList               SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElement       OPTIONAL,    -- Need N
    ...,
    [[
    listElementToAddModList-rN             SEQUENCE (SIZE (1..maxNrofListElements-rN)) OF ListElement     OPTIONAL     -- Need N
    ]]
}-- ASN1STOP
```

Instead, a non-critical list extension mechanism should typically be used, such that the extension field only adds the new entries of the list. This approach is further described in clause A.4.3.6.

If the critical extension mechanism for a list is used, it should be clarified in the field description that the two versions of the list are not configured together, and that the network should release the contents of the original version when configuring the replacement version.

A.4.3 Non-critical extension of messages

A.4.3.1 General principles

The mechanisms to extend a message in a non-critical manner are defined in A.3.3. W.r.t. the use of extension markers, the following additional guidelines apply:

- When further non-critical extensions are added to a message that has been critically extended, the inclusion of these non-critical extensions in earlier critical branches of the message should be avoided when possible.
- The extension marker ("...") is the primary non-critical extension mechanism that is used but empty sequences may be used if length determinant is not required. Examples of cases where a length determinant is not required:
  - at the end of a message;
  - at the end of a structure contained in a BIT STRING or OCTET STRING.
- When an extension marker is available, non-critical extensions are preferably placed at the location (e.g. the IE) where the concerned parameter belongs from a logical/ functional perspective (referred to as the '*default extension location*').
- It is desirable to aggregate extensions of the same release or version of the specification into a group, which should be placed at the lowest possible level.
- In specific cases it may be preferable to place extensions elsewhere (referred to as the '*actual extension location*') e.g. when it is possible to aggregate several extensions in a group. In such a case, the group should be placed at the lowest suitable level in the message.

- In case placement at the default extension location affects earlier critical branches of the message, locating the extension at a following higher level in the message should be considered.
- In case an extension is not placed at the default extension location, an IE should be defined. The IE's ASN.1 definition should be placed in the same ASN.1 clause as the default extension location. In case there are intermediate levels in-between the actual and the default extension location, an IE may be defined for each level. Intermediate levels are primarily introduced for readability and overview. Hence intermediate levels need not always be introduced e.g. they may not be needed when the default and the actual extension location are within the same ASN.1 clause.

A.4.3.2 Further guidelines

Further to the general principles defined in the previous clause, the following additional guidelines apply regarding the use of extension markers:

- Extension markers within SEQUENCE:
  - Extension markers are primarily, but not exclusively, introduced at the higher nesting levels.
  - Extension markers are introduced for a SEQUENCE comprising several fields as well as for information elements whose extension would result in complex structures without it (e.g. re-introducing another list).
  - Extension markers are introduced to make it possible to maintain important information structures e.g. parameters relevant for one particular RAT.
  - Extension markers are also used for size critical messages (i.e. messages on BCCH, BR-BCCH, PCCH and CCCH), although introduced somewhat more carefully.
  - The extension fields introduced (or frozen) in a specific version of the specification are grouped together using double brackets.
- Extension markers within ENUMERATED:
  - Spare values may be used until the number of values reaches the next power of 2, while the extension marker caters for extension beyond that limit, given that the use of spare values in a later Release is possible without any error cases.
  - A suffix of the form "vXYZ" is used for the identifier of each new value, e.g. "value-vXYZ".
- Extension markers within CHOICE:
  - Extension markers are introduced when extension is foreseen and when comprehension is not required by the receiver i.e. behaviour is defined for the case where the receiver cannot comprehend the extended value (e.g. ignoring an optional CHOICE field). It should be noted that defining the behaviour of a receiver upon receiving a not comprehended choice value is not required if the sender is aware whether or not the receiver supports the extended value.
  - A suffix of the form "vXYZ" is used for the identifier of each new choice value, e.g. "choice-vXYZ".

Non-critical extensions at the end of a message/ of a field contained in an OCTET or BIT STRING:

- When a nonCriticalExtension is actually used, a "Need" code should not be provided for the field, which always is a group including at least one extension and a field facilitating further possible extensions. For simplicity, it is recommended not to provide a "Need" code when the field is not actually used either.

Further, more general, guidelines:

- In case a need code is not provided for a group, a "Need" code is provided for all individual extension fields within the group i.e. including for fields that are not marked as OPTIONAL. The latter is to clarify the action upon absence of the whole group.

A.4.3.3 Typical example of evolution of IE with local extensions

The following example illustrates the use of the extension marker for a number of elementary cases (sequence, enumerated, choice). The example also illustrates how the IE may be revised in case the critical extension mechanism is used.

NOTE In case there is a need to support further extensions of release n while the ASN.1 of release (n+1) has been frozen, without requiring the release n receiver to support decoding of release (n+1) extensions, more advanced mechanisms are needed e.g. including multiple extension markers.

```
-- /example/ ASN1START

InformationElement1 ::=           SEQUENCE {
   field1                          ENUMERATED {
                                     value1, value2, value3, value4-v880,
                                     ..., value5-v960 },
   field2                          CHOICE {
      field2a                         BOOLEAN,
      field2b                         InformationElement2b,
      ...,
      field2c-v960                    InformationElement2c-r9
   },
   ...,
   [[
   field3-r9                       InformationElement3-r9     OPTIONAL       -- Need R
   ]],
   [[
   field3-v9a0                     InformationElement3-v9a0   OPTIONAL,      -- Need R
   field4-r9                       InformationElement4        OPTIONAL       -- Need R
   ]]
}

InformationElement1-r10 ::=       SEQUENCE {
   field1                          ENUMERATED {
                                     value1, value2, value3, value4-v880,
                                     value5-v960, value6-v1170, spare2, spare1, ... },
   field2                          CHOICE {
      field2a                         BOOLEAN,
      field2b                         InformationElement2b,
      field2c-v960                    InformationElement2c-r9,
      ...,
      field2d-v12b0                   INTEGER (0..63)
```

```
    },
    field3-r9                       InformationElement3-r10       OPTIONAL,   -- Need R
    field4-r9                       InformationElement4           OPTIONAL,   -- Need R
    field5-r10                      BOOLEAN,
    field6-r10                      InformationElement6-r10       OPTIONAL,   -- Need R
    ...,
    [[
    field3-v1170                     InformationElement3-v1170      OPTIONAL    -- Need R
    ]]
}

-- ASN1STOP
```

Some remarks regarding the extensions of *InformationElement1* as shown in the above example:

- The *InformationElement1* is initially extended with a number of non-critical extensions. In release 10 however, a critical extension is introduced for the message using this IE. Consequently, a new version of the IE *InformationElement1* (i.e. *InformationElement1-r10*) is defined in which the earlier non-critical extensions are incorporated by means of a revision of the original field.
- The *value4-v880* is replacing a spare value defined in the original protocol version for *field1*. Likewise *value6-v1170* replaces *spare3* that was originally defined in the r10 version of *field1*.
- Within the critically extended release 10 version of *InformationElement1*, the names of the original fields/IEs are not changed, unless there is a real need to distinguish them from other fields/IEs. E.g. the *field1* and *InformationElement4* were defined in the original protocol version (release 8) and hence not tagged. Moreover, the *field3-r9* is introduced in release 9 and not re-tagged; although, the *InformationElement3* is also critically extended and therefore tagged *InformationElement3-r10* in the release 10 version of InformationElement1.

A.4.3.4 Typical examples of non critical extension at the end of a message

The following example illustrates the use of non-critical extensions at the end of the message or at the end of a field that is contained in a BIT or OCTET STRING i.e. when an empty sequence is used.

```
-- /example/ ASN1START

RRCMessage-r8-IEs ::=          SEQUENCE {
    field1                      InformationElement1,
    field2                      InformationElement2,
    field3                      InformationElement3             OPTIONAL,   -- Need N
    nonCriticalExtension          RRCMessage-v860-IEs             OPTIONAL
}

RRCMessage-v860-IEs ::=        SEQUENCE {
    field4-v860                  InformationElement4             OPTIONAL,   -- Need S
    field5-v860                  BOOLEAN                         OPTIONAL,   -- Cond C54
    nonCriticalExtension          RRCMessage-v940-IEs             OPTIONAL
```

```
}

RRCMessage-v940-IEs ::=        SEQUENCE {
    field6-v940                  InformationElement6-r9           OPTIONAL,   -- Need R
    nonCriticalExtensions          SEQUENCE {}                    OPTIONAL
}

-- ASN1STOP
```

Some remarks regarding the extensions shown in the above example:

– The *InformationElement4* is introduced in the original version of the protocol (release 8) and hence no suffix is used.

A.4.3.5 Examples of non-critical extensions not placed at the default extension location

The following example illustrates the use of non-critical extensions in case an extension is not placed at the default extension location.

– *ParentIE-WithEM*

The IE *ParentIE-WithEM*is an example of a high level IE including the extension marker (EM). The root encoding of this IE includes two lower level IEs *ChildIE1-WithoutEM* and *ChildIE2-WithoutEM* which not include the extension marker. Consequently, non-critical extensions of the Child-IEs have to be included at the level of the Parent-IE.

The example illustrates how the two extension IEs *ChildIE1-WithoutEM-vNx0* and *ChildIE2-WithoutEM-vNx0* (both in release N) are used to connect non-critical extensions with a default extension location in the lower level IEs to the actual extension location in this IE.

***ParentIE-WithEM* information element**

```
-- /example/ ASN1START

ParentIE-WithEM ::=              SEQUENCE {
    -- Root encoding, including:
    childIE1-WithoutEM              ChildIE1-WithoutEM           OPTIONAL,      -- Need N
    childIE2-WithoutEM              ChildIE2-WithoutEM           OPTIONAL,      -- Need N
    ...,
    [[
    childIE1-WithoutEM-vNx0          ChildIE1-WithoutEM-vNx0    OPTIONAL,      -- Need N
    childIE2-WithoutEM-vNx0          ChildIE2-WithoutEM-vNx0    OPTIONAL       -- Need N
    ]]
}

-- ASN1STOP
```

Some remarks regarding the extensions shown in the above example:

– The fields *childIEx-WithoutEM-vNx0* may not really need to be optional (depends on what is defined at the next lower level).

– In general, especially when there are several nesting levels, fields should be marked as optional only when there is a clear reason.

– *ChildIE1-WithoutEM*

The IE *ChildIE1-WithoutEM* is an example of a lower level IE, used to control certain radio configurations including a configurable feature which can be setup or released using the local IE *ChIE1-ConfigurableFeature*. The example illustrates how the new field *chIE1-NewField* is added in release N to the configuration of the configurable feature. The example is based on the following assumptions:

– When initially configuring as well as when modifying the new field, the original fields of the configurable feature have to be provided also i.e. as if the extended ones were present within the setup branch of this feature.

– When the configurable feature is released, the new field should be released also.

– When omitting the original fields of the configurable feature the UE continues using the existing values (which is used to optimise the signalling for features that typically continue unchanged upon handover).

– When omitting the new field of the configurable feature the UE releases the existing values and discontinues the associated functionality (which may be used to support release of unsupported functionality upon handover to an eNB supporting an earlier protocol version).

The above assumptions, which affect the use of conditions and need codes, may not always apply. Hence, the example should not be re-used blindly.

ChildIE1-WithoutEM information element

```
-- /example/ ASN1START

ChildIE1-WithoutEM ::=           SEQUENCE {
    -- Root encoding, including:
    chIE1-ConfigurableFeature         ChIE1-ConfigurableFeature      OPTIONAL       -- Need N
}

ChildIE1-WithoutEM-vNx0 ::=    SEQUENCE {
    chIE1-ConfigurableFeature-vNx0     ChIE1-ConfigurableFeature-vNx0  OPTIONAL    -- Cond ConfigF
}

ChIE1-ConfigurableFeature ::=      CHOICE {
    release                        NULL,
    setup                          SEQUENCE {
        -- Root encoding
    }
}

ChIE1-ConfigurableFeature-vNx0 ::=  SEQUENCE {
    chIE1-NewField-rN                INTEGER (0..31)
}
```

```
-- ASN1STOP
```

Conditional presence	Explanation
ConfigF	The field is optional present, need R, in case of chIE1-ConfigurableFeature is included and set to "setup"; otherwise the field is absent and the UE shall delete any existing value for this field.

– *ChildIE2-WithoutEM*

The IE *ChildIE2-WithoutEM* is an example of a lower level IE, typically used to control certain radio configurations. The example illustrates how the new field *chIE1-NewField* is added in release N to the configuration of the configurable feature.

***ChildIE2-WithoutEM* information element**

```
-- /example/ ASN1START

ChildIE2-WithoutEM ::=            CHOICE {
    release                        NULL,
    setup                          SEQUENCE {
        -- Root encoding
    }
}

ChildIE2-WithoutEM-vNx0 ::=       SEQUENCE {
    chIE2-NewField-rN               INTEGER (0..31)             OPTIONAL    -- Cond ConfigF
}

-- ASN1STOP
```

Conditional presence	Explanation
ConfigF	The field is optional present, need R, in case of chIE2-ConfigurableFeature is included and set to "setup"; otherwise the field is absent and the UE shall delete any existing value for this field.

A.4.3.6 Non-critical extensions of lists with ToAddMod/ToRelease

When the size of a list using the ToAddMod/ToRelease construction is extended and/or fields are added to the list element structure, the list should be non-critically extended in accordance with the following general principles:

– When only the size of the list is extended, this extension is reflected in a non-critical extension of the list, with a "SizeExt" suffix added to the end of the field name (before the -vNxy suffix). The differential size of the extended list uses the suffix "Diff". A new ToRelease list is needed, and its range should include only the increase in list size. In many cases, extending the list size will also require an extended list element ID type to account for the increased size of the list; in these cases the element type

will need to be extended to include the extended element ID, resulting in a more complex extension (see example 3 for further discussion of this case). The field description table should indicate that the UE considers the original list and the extension list as a single list; thus entries added with the original list can be modified by the extension list (or removed by the extension of the ToRelease list), or vice versa. The result is as shown in the following example:

```
-- /example 1/ ASN1START

ContainingStructure ::=           SEQUENCE {
    listElementToAddModList           SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElement           OPTIONAL,    -- Need N
    listElementToReleaseList          SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElementId         OPTIONAL,    -- Need N
    ...,
    [[
    -- Non-critical extension lists
    listElementToAddModListSizeExt-vNxy  SEQUENCE (SIZE (1..maxNrofListElementsDiff-rN)) OF ListElement     OPTIONAL,    -- Need N
    listElementToReleaseListSizeExt-vNxy SEQUENCE (SIZE (1..maxNrofListElementsDiff-rN)) OF ListElementId   OPTIONAL     -- Need N
    ]]
}
-- ASN1STOP
```

– When fields are added to the list element structure, an extension marker should normally be used if available. If no extension marker is available or if overhead or other considerations prevent using the extension marker, an extension structure should be created for the new fields, with the suffix "Ext" added to the end of the field name and the element structure type name (before the -vNxy suffix), and a parallel ToAddMod list introduced to hold the new structures, also with the "Ext" suffix. The field description table should indicate that the parallel list contains the same number of entries, and in the same order, as the original list. No new ToRelease list is typically needed (unless the list element ID type changes). It should typically be ensured that the contained fields in the "Ext" elements are releasable without release and add of the entire list element; this can, for instance, be ensured by having the new fields be OPTIONAL Need R. If multiple extensions of the same list are needed, the version suffix should distinguish the lists (e.g. *listElementToAddModListExt-vNwz* added after *listElementToAddModListExt-vNxy*). The result is as shown in the following example:

```
-- /example 2/ ASN1START

ContainingStructure ::=           SEQUENCE {
    listElementToAddModList           SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElement           OPTIONAL,    -- Need N
    listElementToReleaseList          SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElementId         OPTIONAL,    -- Need N
    ...,
    [[
    -- Parallel list
    listElementToAddModListExt-vNxy    SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElementExt-vNxy    OPTIONAL     -- Need N
    ]],
     [[
     -- Second parallel list from a later spec version
     listElementToAddModListExt-vNwz     SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElementExt-vNwz    OPTIONAL    -- Need N
     ]]
}

ListElement ::=                   SEQUENCE {
    elementId                       ListElementId,
```

```
   field1                          INTEGER (0..3),
   field2                          ENUMERATED { value1, value2, value3 }
}

ListElementExt-vNxy ::=           SEQUENCE {
   field3-rN                       BIT STRING (SIZE (8))                                  OPTIONAL    -- Need R
}

ListElementExt-vNwz ::=           SEQUENCE {
   field4-rN                       INTEGER (0..255)                                      OPTIONAL    -- Need R
}
-- ASN1STOP
```

– When the size of a list is extended and fields are added to the list element structure, an extension marker should normally be used for the added fields if available, and the list extended with the non-critical mechanism as described in example 1 above. Note that if the list element ID type changes in this case, the new ID can be added after the extension marker, and the entries of the size-extended ToRelease list should have the type of the new ID (e.g. *ListElementId-vNxy*). If no extension marker is available or if overhead or other considerations prevent using the extension marker, an extension structure should be created for the new fields and a parallel list with ToAddMod introduced to hold the extension structures, as in the second example above, for entries of the original list and for entries of the extension list holding new entries. The field description table should indicate that the parallel list contains the same number of entries, and in the same order, as the concatenation of the original list and the extension list. An extended ToRelease list is needed, but no additional parallel ToRelease list is needed (i.e. there is no *listElementToReleaseListExt-vNxy* in the example below), as the original and extended ToRelease lists suffice to release any element of the combined list. The extended element ID type should be captured as a non-critical extension of the original element ID type, with the field description indicating that if the extended ID is present, the original ID is ignored. The result is as shown in the following example:

```
-- /example 3/ ASN1START

ContainingStructure ::=           SEQUENCE {
   listElementToAddModList             SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElement             OPTIONAL,    -- Need N
   listElementToReleaseList            SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElementId           OPTIONAL,    -- Need N
   ...,
   [[
   -- Non-critical extension lists
   listElementToAddModListSizeExt-vNxy  SEQUENCE (SIZE (1..maxNrofListElementsDiff-rN)) OF ListElement         OPTIONAL,    -- Need N
   listElementToReleaseListSizeExt-vNxy SEQUENCE (SIZE (1..maxNrofListElementsDiff-rN)) OF ListElementId-vNxy   OPTIONAL,    -- Need N
   -- Parallel list with maxNrofListElements-rN = maxNrofListElements + maxNrofListElementsDiff-rN
   listElementToAddModListExt-vNxy     SEQUENCE (SIZE (1..maxNrofListElements-rN)) OF ListElementExt-vNxy      OPTIONAL    -- Need N
   ]]
}

ListElement ::=                   SEQUENCE {
   elementId                       ListElementId,
   field1                          INTEGER (0..3),
   field2                          ENUMERATED { value1, value2, value3 }
}

ListElementExt-vNxy ::=           SEQUENCE {
   -- Field description should indicate that if the elementId-vNxy is present, the elementId (without suffix) is ignored
```

```
    elementId-vNxy                   ListElementId-vNxy                                          OPTIONAL,    -- Need S
    field3-rN                       BIT STRING (SIZE (8))                                       OPTIONAL     -- Need R
}

ListElementId ::= INTEGER (0..maxNrofListElements-1)

ListElementId-vNxy ::= INTEGER (maxNrofListElements..maxNrofListElements-1-rN)
-- ASN1STOP
```

– When different extensions are made to a list in separate releases, the extension mechanisms described above may interact. In case fields are added in Rel-M (*listElementToAddModListExt-vMxy*) and later the list size is extended in Rel-N (*listElementToAddModListSizeExt-vNwz*), the size-extended list in Rel-N should be a single list extending the combination of *listElementToAddModList* and *listElementToAddModListExt-vMxy*. This requires creating a new type (*ListElement-rN*) to contain the combined fields of *ListElement* and *ListElementExt-vMxy*. A corresponding ToRelease list is needed. The result is as shown in the following example:

```
-- /example 4/ ASN1START

ContainingStructure ::=          SEQUENCE {
    listElementToAddModList          SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElement          OPTIONAL,    -- Need N
    listElementToReleaseList         SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElementId        OPTIONAL,    -- Need N
    ...,
    [[
    -- Parallel list (Rel-M)
    listElementToAddModListExt-vMxy     SEQUENCE (SIZE (1..maxNrofListElements)) OF ListElementExt-vMxy    OPTIONAL     -- Need N
    ]],
     [[
     -- Size-extended list (Rel-N) with maxNrofListElements-rN = maxNrofListElements + maxNrofListElementsDiff-rN
     listElementToAddModListSizeExt-vNwz  SEQUENCE (SIZE (1..maxNrofListElementsDiff-rN)) OF ListElement-rN   OPTIONAL,    -- Need N
    listElementToReleaseListSizeExt-vNwz SEQUENCE (SIZE (1..maxNrofListElementsDiff-rN)) OF ListElementId-vNwz    OPTIONAL    -- Need N
     ]]
}

ListElement ::=                  SEQUENCE {
    elementId                       ListElementId,
    field1                          INTEGER (0..3),
    field2                          ENUMERATED { value1, value2, value3 }
}

ListElementExt-vMxy ::=           SEQUENCE {
    field3-rM                        BIT STRING (SIZE (8))                                       OPTIONAL     -- Need R
}

ListElement-rN ::=               SEQUENCE {
    elementId-vNwz                   ListElementId-vNwz,
    field1                          INTEGER (0..3),
    field2                          ENUMERATED { value1, value2, value3 },
    field3-rN                        BIT STRING (SIZE (8))                                       OPTIONAL     -- Need R
}
```

```

ListElementId-vNwz ::= INTEGER (maxNrofListElements..maxNrofListElementsDiff-1-rN)
-- ASN1STOP
```

A.5 Guidelines regarding inclusion of transaction identifiers in RRC messages

The following rules provide guidance on which messages should include a Transaction identifier

1: DL messages on CCCH that move UE to RRC-Idle should not include the RRC transaction identifier.

2: All network initiated DL messages by default should include the RRC transaction identifier.

3: All UL messages that are direct response to a DL message with an RRC Transaction identifier should include the RRC Transaction identifier.

4: All UL messages that require a direct DL response message should include an RRC transaction identifier.

5: All UL messages that are not in response to a DL message nor require a corresponding response from the network should not include the RRC Transaction identifier.

A.6 Guidelines regarding use of need codes

The following rule provides guidance for determining need codes for optional downlink fields:

- if the field needs to be stored by the UE (i.e. maintained) when absent:
  - use Need M (=Maintain);
- else, if the field needs to be released by the UE when absent:
  - use Need R (=Release);
- else, if UE shall take no action when the field is absent (i.e. UE does not even need to maintain any existing value of the field):
  - use Need N (=None);
- else (UE behaviour upon absence does not fit any of the above conditions):
  - use Need S (=Specified);
  - specify the UE behaviour upon absence of the field in the procedural text or in the field description table.

A.7 Guidelines regarding use of conditions

Conditions are primarily used to specify network restrictions, for which the following types can be distinguished:

- Message Contents related constraints e.g. that a field B is mandatory present if the same message includes field A and when it is set value X.
- Configuration Constraints e.g. that a field D can only be signalled if field C is configured and set to value Y. (i.e. regardless of whether field C is present in the same message or previously configured).

The use of these conditions is illustrated by an example.

```
-- /example/ ASN1START

RRCMessage-IEs ::= SEQUENCE {
   fieldA                     FieldA              OPTIONAL,   -- Need M
   fieldB                     FieldB              OPTIONAL,   -- Cond FieldAsetToX
   fieldC                     FieldC              OPTIONAL,   -- Need M
   fieldD                     FieldD              OPTIONAL,   -- Cond FieldCsetToY
   nonCriticalExtension          SEQUENCE {}          OPTIONAL
}

-- /example/ ASN1STOP
```

Conditional presence	Explanation
FieldAsetToX	The field is mandatory present if fieldA is included and set to valueX. Otherwise the field is optionally present, need R.
FieldCsetToY	The field is optionally present, need M, if fieldC is configured and set to valueY. Otherwise the field is absent and the UE does not maintain the value

A.8 Miscellaneous

The following miscellaneous convention should be used:

- UE capabilities: TS 38.306 [26] specifies that the network should in general respect the UE's capabilities. Hence there is no need to include statement clarifying that the network, when setting the value of a certain configuration field, shall respect the related UE capabilities unless there is a particular need e.g. particularly complicated cases.
- UE capabilities: If a UE capability for a feature requires at least FR1/FR2 or at least FDD/TDD differentiation, it is defined in per band signaling (under *BandNR* in *RF-Parameters*) in the ASN.1, i.e. no new UE capabilities is defined in the FR1/FR2 and FDD/TDD differentiation capability signaling branches.

Annex B (informative): RRC Information

B.1 Protection of RRC messages

The following list provides information which messages can be sent (unprotected) prior to AS security activation and which messages can be sent unprotected after AS security activation. Those messages indicated "-" in "P" column should never be sent unprotected by gNB or UE. Further requirements are defined in the procedural text.

P…Messages that can be sent (unprotected) prior to AS security activation

A – I…Messages that can be sent without integrity protection after AS security activation

A – C…Messages that can be sent unciphered after AS security activation

NA… Message can never be sent after AS security activation

B.2 Description of BWP configuration options

There are two possible ways to configure BWP#0 (i.e. the initial BWP) for a UE:

1) Configure *BWP-DownlinkCommon* and *BWP-UplinkCommon* in *ServingCellConfigCommon*, but do not configure dedicated configurations in *BWP-DownlinkDedicated* or *BWP-UplinkDedicated* in *ServingCellConfig*.

2) Configure both *BWP-DownlinkCommon* and *BWP-UplinkCommon* in *ServingCellConfigCommon* and configure dedicated configurations in at least one of *BWP-DownlinkDedicated* or *BWP-UplinkDedicated* in *ServingCellConfig*.

The same way of configuration is used for UL BWP#0 and DL BWP#0 if both are configured.

With the first option (illustrated by figure B2-1 below), the BWP#0 is not considered to be an RRC-configured BWP, i.e., UE only supporting one BWP can still be configured with BWP#1 in addition to BWP#0 when using this configuration. The BWP#0 can still be used even if it does not have the dedicated configuration, albeit in a more limited manner since only the SIB1-defined configurations are available. For example, only DCI format 1_0 can be used with BWP#0 without dedicated configuration, so changing to another BWP requires RRCReconfiguration since DCI format 1_0 doesn't support DCI-based switching.

Figure B2-1: BWP#0 configuration without dedicated configuration

With the second option (illustrated by figure B2-2 below), the BWP#0 is considered to be an RRC-configured BWP, i.e. UE only supporting one BWP cannot be configured with BWP#1 in addition to BWP#0 when using this configuration. However, UE supporting more than one BWP can still switch to and from BWP#0 e.g. via DCI normally, and there are no explicit limitations to using the BWP#0 (compared to the first option).

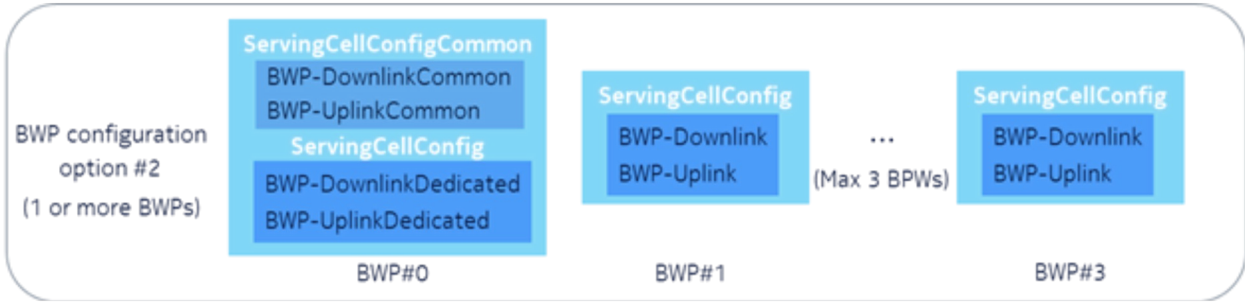

Figure B2-2: BWP#0 configuration with dedicated configuration

For BWP#0, the *BWP-DownlinkCommon* and *BWP-UplinkCommon* in *ServingCellConfigCommon* should match the parameters configured by MIB and SIB1 (if provided) in the corresponding serving cell.

If an RedCap-specific initial DL BWP is configured, for BWP switching, the BWP #0 always maps to the RedCap-specific initial DL BWP. If a RedCap-specific initial UL BWP is configured, for BWP switching on NUL, the BWP #0 always maps to the RedCap-specific initial UL BWP, for BWP switching on SUL, the BWP#0 always maps to the initial UL BWP.

Annex C (normative):List of CRs Containing Early Implementable Features and Corrections

This annex lists the Change Requests (CRs) whose changes may be implemented by a UE of an earlier release than which the CR was approved in (i.e. CRs that contain on their coversheets the sentence "Implementation of this CR from Rel-N will not cause interoperability issues").

Table C-1: List of CRs Containing Early Implementable Features and Corrections

TDoc Number (RP-xxxxxx): CR Title	CR Number(s)	CR Revision Number(s)	Earliest Implementable Release	Additional Information
RP-200335: Correction on usage of access category 2 for UAC for RNA update	1141	2	Release 15	
RP-201185: Introduction of signalling for high-speed train scenarios	1464	5	Release 15	
RP-201216: Release-16 UE capabilities based on RAN1, RAN4 feature lists and RAN2	1665	2	Release 15	Early implementation part is referring to the aspect covered by - R2-2006203: Extension of CSI-RS capabilities per codebook type - R2-2006360: Intraband EN_DC power class expansion for 29 dBm
RP-202768: UE behaviour when UL 7.5KHz shift is not supported	2107	2	Release 15	
RP-202790: Correction on uac-AccessCategory1-SelectionAssistanceInfo	2130	1	Release 15	
RP-211483: Clarification on the initiation of RNA update	2581	1	Release 15	
RP-201190: Introduction of eCall over IMS for NR	1670	-	Release 15	
RP-212598: Distinguishing support of extended band n77	2810	2	Release 15	
RP-213342: Duty cycle signalling for power class 1.5	2817	1	Release 15	
RP-213345: CR on 38.331 for introducing UE capability of txDiversity	2859	1	Release 15	
RP-220497: Introduction of function for RRM enhancements for Rel-17 NR FR1 HST	2898	2	Release 16	
RP-220838: Release-17 UE capabilities based on R1 and R4 feature lists (TS38.331)	2901	1	Release 15	Early implementation part is referring to the aspect covered by: - R2-2203898: Introduction of BCS4 and BCS5 - R2-2203836: Introducing UE capability for power class 5 for FR2 FWA
RP-221721: CR on the CBM/IBM reporting-38331	2916	2	Release 16	
RP-221736: Distinguishing support	3078	2	Release 15	

of band n77 restrictions in Canada [n77 Canada]				
RP-222527: Correction to additionalSpectrumEmission for UL CA in n77 for the US	3476	-	Release 15	
RP-222527: Correction to additionalSpectrumEmission for UL CA in n77 for Canada	3478	-	Release 15	
RP-232570: Addition of extended number range for NS value	3900	6	Release 16	
RP-233888: Introduction of FR2 FBG2 CA BW classes	2867	6	Release 15	
RP-233882: Enhancing SCell A2 event reporting	4375	2	Release 15	
RP-233890: PTM retransmission reception for multicast DRX with HARQ feedback disabled [PTM_ReTx_Mcast_HARQ_Disb]	4504	-	Release 17	
RP-240667: UE capability for Enhanced channel raster	4445	3	Release 16	
RP-240658: Introduction of TxDiversity for 2Tx capability	4639	2	Release 17	
RP-241543: Introduction of barring exemption for RedCap UEs for emergency calls	4570	4	Release 17	
RP-241543: Correction on Redcap 1 Rx and 2 Rx barring	4632	5	Release 17	
RP-241544: Correction on TRS in idle and inactive	4755	3	Release 17	
RP-241544: Clarification RLM/BFD relaxation and short DRX	4771	2	Release 17	
RP-233915: Introduction of further measurement gap enhancements	4063	6	Release 17	Early implementation part is referring to all aspects other than effective measurement window. Early implementation also includes the corresponding capability of R2-2311897 (within CR 4510 of RP-233940).
RP-243227: Introduction of network signalling of maximum number of UL segments [Max-RRC-SegUL]	5004	3	Release 16	
RP-243233: Correction on deprioritisationTimer	5170	2	Release 15	

RP-252791: SSB position restrictions for less-than-5MHz SCells	5249	3	Release 18	
RP-252924: Introduction of 7MHz channel bandwidth	5308	4	Release 18	
RP-252788: Introduction of less than 5MHz in NTN	5389	2	Release 18	
RP-253741: Correction on PC5 Relay RLC channel configuration	5510	3	Release 17	

Annex D (normative):UE requirements on ASN.1 comprehension

This clause specifies UE requirements regarding the ASN.1 transfer syntax support, i.e. the ASN.1 definitions to be comprehended by the UE.

A UE that indicates release X in field *accessStratumRelease* shall comprehend the entire transfer syntax (ASN.1) of release X, in particular at least the first version upon ASN.1 freeze. The UE is however not required to support dedicated signalling related transfer syntax associated with optional features it does not support.

In case a UE that indicates release X in field *accessStratumRelease* supports a feature specified in release Y, which is later than release X, (i.e. early UE implementation) additional requirements apply. The UE obviously also has to support the ASN.1 parts related to indicating support of the feature (in UE capabilities).

Critical extensions (dedicated signaling)

If the early implemented feature involves one or more critical extensions in dedicated signalling, the UE shall comprehend the parts of the transfer syntax (ASN.1) of release Y that are related to the feature implemented early. This, in particular, concerns the ASN.1 parts related to configuration of the feature.

If configuration of an early implemented feature introduced in release Y involves a message or field that has been critically extended, the UE shall support configuration of all features supported by the UE that are associated with sub-fields of this critical extension. Apart from the early implemented feature(s), the UE needs, however, not to support functionality beyond what is defined in the release the UE indicates in access stratum release.

Let's consider the example of a UE indicating value X in field *accessStratumRelease* that supports the features A1, A3, and A5, associated with fields *fieldA1*, *fieldA3* and *fieldA5* of *InformationElementA* (see ASN.1 below).

The feature A5 implemented early is associated with *fieldA5*, and can only be configured by the –rY version of *InformationElementA*. In such case, the UE should support configuration of all the features A1, A3 and A5 associated with fields *fieldA1*, *fieldA3* and *fieldA5* by the –rY version of *InformationElementA*.

If, however, one of the features was modified, e.g. the feature A3 associated with *fieldA3*, the network should assume the UE only supports the feature A3 according to the release it indicated in field *accessStratumRelease* (i.e. X).

The UE is neither required to support the additional code-point (*n80-vY0*) nor the additional sub-field (*fieldA3c-rY*).

```
InformationElementA-rX ::=     SEQUENCE {
    fieldA1-rX                  InformationElementA1-rX             OPTIONAL,   -- Need N
   fieldA2-rX                   InformationElementA2-rX             OPTIONAL,   -- Need R
   fieldA3-rX                   InformationElementA3-rX             OPTIONAL    -- Need R
}

InformationElementA-rY ::=     SEQUENCE {
   fieldA1-rY                   InformationElementA1-rX             OPTIONAL,   -- Need N
   fieldA2-rY                   InformationElementA2-rX             OPTIONAL,   -- Need R
   fieldA3-rY                   InformationElementA3-rY             OPTIONAL,   -- Need R
   fieldA4-rY                   InformationElementA4-rY             OPTIONAL,   -- Need R
   fieldA5-rY                   InformationElementA5-rY             OPTIONAL    -- Need R
}
```

```
InformationElementA3-rX ::= SEQUENCE {
   fieldA3a-rX                 InformationElementA3a-rX            OPTIONAL,   -- Need N
   fieldA3b-rX                 ENUMERATED {n10, n20, n40}          OPTIONAL    -- Need R
}

InformationElementA3-rY ::=   SEQUENCE {
   fieldA3a-rY                 InformationElementA3a-rX            OPTIONAL,   -- Need N
   fieldA3b-rY                 ENUMERATED {n10, n20, n40, n80-vY0}   OPTIONAL,   -- Need R
   fieldA3c-rY                 InformationElementA3c-rY            OPTIONAL    -- Need R
}
```

Non-critical extensions (dedicated and broadcast signaling)

If the early implemented feature involves one or more non-critical extensions, the UE shall comprehend the parts of the transfer syntax (ASN.1) of release Y that are related to the feature implemented early.

If the early implemented feature involves one or more non-critical extensions in dedicated signaling, the network does not include extensions introduced after the release X that are not the parts related to the feature which the UE indicates early support of in UE capabilities. The UE shall anyway comprehend the parts of the transfer syntax (ASN.1) which indicate absence of such extensions.

If the early implemented feature involves one or more non-critical extensions in system information, the SIB(s) containing the release Y fields related to the early implemented features may also include other extensions introduced after the release X that are not the parts related to the feature which the UE supports. The UE shall comprehend such intermediate fields (but again is not required to support the functionality associated with these intermediate fields, in case this concerns optional features not supported by the UE).

	RP-82	RP-182663	0259	3	F	Stop of T390 and related UE actions	15.4.0
	RP-82	RP-182657	0260	4	F	Corrections for handover between NR and E-UTRA	15.4.0
	RP-82	RP-182738	0267	3	F	CR on ssb-ToMeasure in MeasurementTimingConfiguration	15.4.0
	RP-82	RP-182659	0269	3	F	Clarification of the applicability of 38.331 to EN-DC	15.4.0
	RP-82	RP-182654	0270	3	F	Clarification on the smtc signalled for intra-NR handover, PSCell change or SCell addition	15.4.0
	RP-82	RP-182654	0273	3	F	CR on fallback to the setup procedure	15.4.0
	RP-82	RP-182654	0275	1	F	Correction on cell sorting for periodical measurement reporting	15.4.0
	RP-82	RP-182660	0277	2	F	Measurement related actions upon re-establishment	15.4.0
	RP-82	RP-182654	0278	1	F	CR on threshold description for cell quality derivation	15.4.0
	RP-82	RP-182654	0282	1	F	CR to avoid unnecessary L3 filtered beam measurements	15.4.0
	RP-82	RP-182660	0283	2	F	CR on CGI reporting	15.4.0
	RP-82	RP-182660	0291	3	F	Additional UE capabilities for NR standalone	15.4.0
	RP-82	RP-182667	0294	4	F	NR RRC Processing Time	15.4.0
	RP-82	RP-182812	0295	5	F	Update of L1/RF capabilities	15.4.0
	RP-82	RP-182651	0296	2	F	UE configuration on re-establishment procedure	15.4.0
	RP-82	RP-182651	0298	2	F	SIB size limitation [M201]	15.4.0
	RP-82	RP-182651	0299	2	F	Correction on SRS-TPC-CommandConfig	15.4.0
	RP-82	RP-182651	0302	2	F	Clarification on counter check procedure	15.4.0
	RP-82	RP-182666	0307	4	F	CR on the Clarification for the Support of the Delay Budget Report in NR	15.4.0
	RP-82	RP-182666	0320	3	F	ssb-PositionsInBurst correction	15.4.0

	RP-82	RP-182666	0325	3	F	Barring behaviour when SIB1 reception fails	15.4.0
	RP-82	RP-182666	0329	5	F	System Information Storing and Validity Clarifications and Corrections	15.4.0
	RP-82	RP-182666	0330	3	F	SIBs required before initiating connection	15.4.0
	RP-82	RP-182652	0333	1	F	On contens of measObjectEUTRA	15.4.0
	RP-82	RP-182654	0335	2	F	A3 and A5 corrections – neighbouring cell definition	15.4.0
	RP-82	RP-182650	0339	2	F	SI reception in RRC Connected mode (RIL#II611)	15.4.0
	RP-82	RP-182650	0340	2	F	Miscellaneous corrections on SI procedures	15.4.0
	RP-82	RP-182652	0342	1	F	On RRM measurements related procedual text corrections	15.4.0
	RP-82	RP-182651	0344	1	F	Clarification for absense of nr-NS-PmaxList IE	15.4.0
	RP-82	RP-182652	0345	2	F	Clarification on paging in connected mode	15.4.0
	RP-82	RP-182651	0350	2	F	ASN.1 correction to fr-InfoListSCG in CG-Config	15.4.0
	RP-82	RP-182661	0355	2	F	Update of L2 capability parameters	15.4.0
	RP-82	RP-182651	0364	1	F	Procedures for full config at RRCResume	15.4.0
	RP-82	RP-182651	0365	2	F	Clarification of PDCP-Config field descriptions	15.4.0
	RP-82	RP-182653	0368	2	F	UE Context handling during handover to NR	15.4.0
	RP-82	RP-182652	0371	2	F	[E255] CR to 38.331 on corrections related to CGI reporting timer T321	15.4.0
	RP-82	RP-182655	0375	3	F	R2-1817981 CR to 38.331 on pendingRnaUpdate setting	15.4.0
	RP-82	RP-182653	0376	2	F	Introducing procedure for reporting RLC failures	15.4.0
	RP-82	RP-182654	0379	2	F	Correction of frequency band indication in MeasObjectNR	15.4.0
	RP-82	RP-182654	0382	2	F	RRC connection release triggered by upper layers	15.4.0
	RP-82	RP-182660	0384	3	F	Correction to configuration of measurement object	15.4.0

	RP-82	RP-182665	0388	3	F	Correction to 38331 in SRS-Config	15.4.0
	RP-82	RP-182657	0391	2	F	Correction for PowerControl-related issues	15.4.0
	RP-82	RP-182668	0395	4	F	Inter-band EN-DC Configured Output Power requirements	15.4.0
	RP-82	RP-182655	0396	2	F	E573 Configuration of SRB1 during Resume	15.4.0
	RP-82	RP-182655	0402	1	F	Triggers for abortion of RRC establishment	15.4.0
	RP-82	RP-182656	0406	2	F	Correction on CN type indication for Redirection from NR to E-UTRA	15.4.0
	RP-82	RP-182664	0409	4	F	Miscellaneous minor corrections	15.4.0
	RP-82	RP-182654	0410	1	F	Invalidation of L1 parameter nrofCQIsPerReport	15.4.0
	RP-82	RP-182654	0411	1	F	Clarifications on RNA update and CN registration (N023)	15.4.0
	RP-82	RP-182666	0412	3	F	Missing optionality bit in CG-ConfigInfo	15.4.0
	RP-82	RP-182662	0414	2	F	Clarification for the implementation of UE feature list item 6-1 (BWP op1)	15.4.0
	RP-82	RP-182654	0417	1	F	Clarification on ssb-PositionsInBurst	15.4.0
	RP-82	RP-182667	0418	3	F	Correction to commonControlResourceSet	15.4.0
	RP-82	RP-182667	0420	2	F	Correction to TDD configuration in SIB1	15.4.0
	RP-82	RP-182668	0421	5	F	Clarification on handling of default parameters	15.4.0
	RP-82	RP-182663	0429	2	F	SRB3 integrity protection failure handling	15.4.0
	RP-82	RP-182653	0431	2	F	Corrections to the field decriptions of System Information	15.4.0
	RP-82	RP-182653	0434	1	F	Correction to SI provision in connected mode	15.4.0
	RP-82	RP-182661	0436	3	F	PDCCH Monitoring Occasions in SI Window	15.4.0
	RP-82	RP-182655	0438	3	F	CR on SI Message Acquisition	15.4.0
	RP-82	RP-182652	0439	1	F	Update of nas-SecurityParamFromNR according to LS from SA3	15.4.0

	RP-82	RP-182652	0445	2	F	Correction to Default MAC Cell Group configuration	15.4.0
	RP-82	RP-182652	0447	1	F	Correction to missing field descriptions of PLMN Identity	15.4.0
	RP-82	RP-182657	0448	2	F	Introducing PDCP suspend procedure	15.4.0
	RP-82	RP-182657	0449	2	F	Correction to PDCP statusReportRequired	15.4.0
	RP-82	RP-182664	0454	3	F	CR to 38.331 on the ambiguity of targetCellIdentity in Resume/Reestablishment MAC-I calculation	15.4.0
	RP-82	RP-182655	0457	1	F	Corrections on P-Max description	15.4.0
	RP-82	RP-182651	0460	2	F	Clarification on Configuration of multiplePHR for EN-DC and NR-CA	15.4.0
	RP-82	RP-182656	0469	2	F	Correction on conditional presence of PCellOnly	15.4.0
	RP-82	RP-182657	0474	4	F	Introduction of power boosting indicator for pi2BPSK waveform	15.4.0
	RP-82	RP-182655	0475	1	F	Correction on the allowedBC-ListMRDC	15.4.0
	RP-82	RP-182649	0476	2	F	Removal of restriction on RB removal and addition	15.4.0
	RP-82	RP-182649	0482	2	F	Correction to full configuration	15.4.0
	RP-82	RP-182661	0492	3	F	CR on MeasurementTimingConfiguration	15.4.0
	RP-82	RP-182654	0502	1	F	Bandwidth configuration for initial BWP	15.4.0
	RP-82	RP-182664	0503	4	F	CORESET#0 configuration when SIB1 is not broadcast	15.4.0
	RP-82	RP-182663	0506	1	F	Correction on the behaviors with cell reselection while T302 is running	15.4.0
	RP-82	RP-182661	0509	2	F	Correction on SDAP reconfiguration handling	15.4.0
	RP-82	RP-182663	0510	1	F	Clarification for the UE behaviour in camped normally and camped on any cell states	15.4.0
	RP-82	RP-182663	0514	2	F	Correction to description of parameter Ns nAndPagingFrameOffset	15.4.0
	RP-82	RP-182649	0515	-	F	Correction to description of parameter Ns	15.4.0
	RP-82	RP-182661	0516	1	F	CR on UE behaviour after SI Acquisition Failure	15.4.0

	RP-82	RP-182662	0518	1	F	CR on PUCCH-ConfigCommon	15.4.0
	RP-82	RP-182662	0520	1	F	Clarifications on receiving RRCReject without wait timer	15.4.0
	RP-82	RP-182665	0522	1	F	CR on powerControlOffset	15.4.0
	RP-82	RP-182664	0524	2	F	Correction to configuration of firstPDCCH-MonitoringOccasionOfPO	15.4.0
	RP-82	RP-182660	0539	1	F	R on PCCH-Config	15.4.0
	RP-82	RP-182649	0541	-	F	Clarification to no barring configuration for Implicit UAC	15.4.0
	RP-82	RP-182649	0542	-	F	Correction to Access Category and barring config determination for implicit access barring	15.4.0
	RP-82	RP-182664	0543	2	F	Per serving cell MIMO layer configuration	15.4.0
	RP-82	RP-182661	0545	1	F	Correction to reconfiguration with sync	15.4.0
	RP-82	RP-182659	0552	1	F	Correction for SSB power	15.4.0
	RP-82	RP-182659	0554	1	F	Corrections on SearchSpace configuration	15.4.0
	RP-82	RP-182665	0558	1	F	Correction for TCI state in ControlResourceSet	15.4.0
	RP-82	RP-182663	0560	1	F	CR for the optional configuration of subbandSize	15.4.0
	RP-82	RP-182650	0562	-	F	Correction on ShortMAC-I description in 38.331	15.4.0
	RP-82	RP-182661	0567	1	F	CR to the field descriptions of System Information	15.4.0
	RP-82	RP-182650	0569	-	F	Clarification on SRB3 release	15.4.0
	RP-82	RP-182650	0570	-	F	Avoiding security risk for RLC UM bearers during termination point change	15.4.0
	RP-82	RP-182660	0571	1	F	MO configuration with SSB SCS for a given SSB frequency	15.4.0
	RP-82	RP-182663	0572	1	F	Barring alleviation for emergency service	15.4.0
	RP-82	RP-182664	0575	1	F	Corrections for security configurations during setup of SRB1	15.4.0
	RP-82	RP-182660	0577	1	F	Clarification of UE behaviour when frequencyBandList is absent in SIB4	15.4.0

	RP-82	RP-182661	0578	2	F	Handling of missing fields in SIB1	15.4.0
	RP-82	RP-182659	0580	1	F	Correction to ControlResourceSetZero	15.4.0
	RP-82	RP-182667	0582	2	F	Full configuration for inter-RAT handover	15.4.0
	RP-82	RP-182664	0587	1	F	Corrections on number of RadioLinkMonitoringRS condifuration	15.4.0
	RP-82	RP-182659	0591	1	F	Clarification on phr-Type2OtherCell	15.4.0
	RP-82	RP-182667	0594	2	F	Addition of PCI in MeasTiming	15.4.0
	RP-82	RP-182667	0600	5	F	Clarifications to SIBs requiring request procedure	15.4.0
	RP-82	RP-182659	0601	1	F	Correction for support of initial downlink BWP	15.4.0
	RP-82	RP-182657	0602	1	F	Miscellaneous corrections related to idle mode SIBs	15.4.0
	RP-82	RP-182657	0603	1	F	Correction for missing fields in SIB2 and SIB4	15.4.0
	RP-82	RP-182657	0604	2	F	Correction to Q-QualMin value range	15.4.0
	RP-82	RP-182663	0616	1	F	Clarification of cell reselection during resume procedure	15.4.0
	RP-82	RP-182663	0617	1	F	Determination of Access Identities for RRC-triggered Access Attempts	15.4.0
	RP-82	RP-182663	0618	1	F	CR to 38.331 on stopping of timer T390 upon reception of RRCRelease	15.4.0
	RP-82	RP-182840	0620	3	F	CR on MN/SN coordination for report CGI procedure	15.4.0
	RP-82	RP-182666	0624	2	F	CR to 38.331 on aligning I-RNTI terminology in paging and SuspendConfig (Alt.2)	15.4.0
	RP-82	RP-182665	0627	2	F	CR to 38.331 on IRAT Cell reselection in RRC_INACTIVE	15.4.0
	RP-82	RP-182662	0638	1	F	CR for pendingRnaUpdate set	15.4.0
	RP-82	RP-182665	0640	2	F	Corrections on BWP ID	15.4.0
	RP-82	RP-182664	0643	1	F	Inter-frequency handover capability	15.4.0
	RP-82	RP-182659	0646	1	F	Search space configuration for DCI format 2_0 monitoring	15.4.0

	RP-82	RP-182739	0647	3	F	Correction on power headroom configuration exchange	15.4.0
	RP-82	RP-182665	0649	2	F	UE capability on PA architecture	15.4.0
	RP-82	RP-182662	0654	1	F	CR on pdsch-TimeDomainAllocationList and pusch-TimeDomainAllocationList	15.4.0
	RP-82	RP-182664	0655	1	F	Correction on the SSB based RACH configuration	15.4.0
	RP-82	RP-182659	0656	1	F	CR on starting bit of Format 2-3	15.4.0
	RP-82	RP-182663	0660	1	C	CR on wait timer in RRC release	15.4.0
	RP-82	RP-182662	0664	1	F	SCell release at RRC Reestablishment	15.4.0
	RP-82	RP-182663	0665	1	F	Clean up of SRB1 terminology	15.4.0
	RP-82	RP-182662	0670	1	F	Correction on the size of PUCCH resource ID	15.4.0
	RP-82	RP-182667	0673	3	F	CR to 38.331 on Integrity Check failure at RRC Reestablishment	15.4.0
	RP-82	RP-182661	0680	1	F	Correction on SI message acquisition timing	15.4.0
	RP-82	RP-182653	0682	-	F	Add t-ReselectionNR-SF in SIB2	15.4.0
	RP-82	RP-182654	0683	-	F	freqBandIndicatorNR correction in MultiFrequencyBandListNR-SIB	15.4.0
	RP-82	RP-182658	0684	2	F	Corrections to CellSelectionInfo in SIB1 and SIB4	15.4.0
	RP-82	RP-182654	0686	-	F	Correction on the field description of DRX timers	15.4.0
	RP-82	RP-182661	0687	1	F	Correction on DC subcarrier usage in SetupComplete message	15.4.0

	RP-109	RP-252768	5468	1	F	UE capability for support of event A4 based CHO for ATG	18.7.0
	RP-109	RP-252767	5473	-	A	Correction on Presence condition of ssbFrequency in servingCellMO for SSB-less SCell	18.7.0
09/2025	RP-109	RP-252796	5209	1	B	ProSe support in NPN [ProSe_NPN]	19.0.0
	RP-109	RP-252791	5249	3	B	SSB position restrictions for less-than-5MHz SCells	19.0.0
	RP-109	RP-252797	5290	3	B	Introduction on the SRS frequency hopping for non-RedCap UE in 38331 [Pos_SRSHop]	19.0.0
	RP-109	RP-252924	5308	4	B	Introduction of 7MHz channel bandwidth	19.0.0
	RP-109	RP-252796	5318	7	B	Introduction of ANR reporting of HSDN cells [ANR_HSDN]	19.0.0
	RP-109	RP-252797	5373	2	B	Introduction of Multi-path Relay Enhancement [N3C_M_Relay]	19.0.0
	RP-109	RP-252788	5389	2	B	Introduction of less than 5MHz in NTN	19.0.0
	RP-109	RP-252779	5395	2	B	Introduction of R19 XR enhancements for RRC spec	19.0.0
	RP-109	RP-252797	5396	1	B	SR triggered SSSG switching [SRTrig_SSSGSwitch]	19.0.0

	RP-109	RP-252798	5399	1	B	Introduction of UAV mobility enhancements [UAV_Mobility]	19.0.0
	RP-109	RP-252775	5400	1	B	Introduction of Rel-19 Multi-carrier enhancements	19.0.0
	RP-109	RP-252764	5403	2	B	Introduction of Rel-19 UE capability, including [TN32HARQ], [Pos_SRSHop], [SRTrig_SSSGSwitch], [SRSCS_ULTxSwitch], [SimCSI_count], [SimCSI_countNES], [TxSwitch_R19]	19.0.0
	RP-109	RP-252798	5406	3	B	Introduction of control parameters for on-demand posSIB request [OdPosSIB_Req]	19.0.0
	RP-109	RP-252798	5410	1	B	Introduction of 32 HARQ processes to TN [TN32HARQ]	19.0.0
	RP-109	RP-252798	5411	2	B	Introduction of 3Tx UL switching [TxSwitch_R19]	19.0.0
	RP-109	RP-252771	5414	2	B	Introduction of Rel-19 Evolution of NR duplex operation (SBFD)	19.0.0
	RP-109	RP-252773	5416	2	B	Introduction of LP-WUS/WUR in RRC	19.0.0
	RP-109	RP-252796	5417	-	B	Introduction of band specific capability for paging [Per_Band_Paging_Cap]	19.0.0
	RP-109	RP-252785	5419	1	B	Introduction of CSSF optimization for NR RRM Ph5	19.0.0
	RP-109	RP-252789	5421	3	B	Introduction of low NR band carrier aggregation via switching	19.0.0
	RP-109	RP-252774	5428	1	B	Introduction of enhancements for network energy efficiency	19.0.0
	RP-109	RP-252780	5429	3	B	Introduction of NR sidelink multi-hop relay	19.0.0
	RP-109	RP-252772	5437	3	B	Introduction of AIML for NR air interface	19.0.0
	RP-109	RP-252770	5441	2	B	Introduction of MIMO Phase 5	19.0.0
	RP-109	RP-252777	5443	2	B	Introduction of RRC changes for mobility enhancements phase 4	19.0.0
	RP-109	RP-252783	5446	4	B	Introduction of SONMDT features	19.0.0
	RP-109	RP-252797	5469	2	B	Introduction of redirection from NR TN to NR NTN to 38.331 [NR_TN_NTN_redir]	19.0.0
	RP-109	RP-252798	5474	2	B	Introduction of UE assistance information for cell DTX/DRX [UAI_cellDTRX]	19.0.0
	RP-109	RP-252808	5476	-	B	Introduction of UE capability on 6 DL MIMO layers	19.0.0
	RP-109	RP-252787	5477	1	B	Introduction of Secondary Cell Measurement Skipping for NR ATG	19.0.0
	RP-109	RP-252786	5479	-	B	Introduction of signaling support for intra-band non-collocated EN-DC/NR-CA deployment Phase 2: new receiver type(s)	19.0.0
	RP-109	RP-252778	5481	-	B	Introduction of NTN Phase 3 enhancements	19.0.0
	RP-109	RP-252784	5482	-	B	Introduction of extension ratio configuration for MPR reduction	19.0.0
12/2025	RP-110	RP-253717	5484	1	A	Correction on nrPreviousCell logging in RLF report	19.1.0
	RP-110	RP-253720	5495	2	A	Correction on AdditionalSpectrumEmission in SL positioning	19.1.0
	RP-110	RP-253724	5499	3	F	Corrections to WI SBFD	19.1.0
	RP-110	RP-253716	5502	2	A	Correction on subcarrierSpacing values in IE SCS-SpecificCarrier	19.1.0
	RP-110	RP-253725	5503	4	F	Miscellaneous corrections on RRC for Rel-19 LP-WUS WUR	19.1.0
	RP-110	RP-253730	5504	4	F	Correction to RRC spec for R19 XR	19.1.0
	RP-110	RP-253741	5510	3	F	Correction on PC5 Relay RLC channel configuration	19.1.0
	RP-110	RP-253716	5517	1	A	Correction on UL Tx switching MIMO coherence capabilities	19.1.0
	RP-110	RP-253740	5530	2	B	Introducing SR resources in LTM cell switch MAC CE [LTM_enh_SR]	19.1.0
	RP-110	RP-253731	5537	4	F	Corrections to WI SLRelay	19.1.0
	RP-110	RP-253717	5539	2	A	Correction to CPAC MRO	19.1.0
	RP-110	RP-253718	5541	2	A	Miscellaneous corrections on mobility enhancements	19.1.0
	RP-110	RP-253718	5544	2	A	Correction on dependency of group-based beam reporting	19.1.0
	RP-110	RP-253723	5548	3	F	Corrections for MIMO Phase 5	19.1.0
	RP-110	RP-253716	5557	1	A	Correction on setting timeSinceCHO-Reconfig when the failure is due to RLF	19.1.0
	RP-110	RP-253718	5558	3	A	Correction on the execution of SCG LTM	19.1.0
	RP-110	RP-253726	5559	3	F	Corrections for Network Energy Saving	19.1.0

	RP-110	RP-253733	5560	2	F	Corrections on SONMDT features	19.1.0
	RP-110	RP-253722	5561	4	F	Corrections to AIML for NR air interface	19.1.0
	RP-110	RP-253720	5563	2	A	Correction to SI reception by remote UE for multi path	19.1.0
	RP-110	RP-253718	5564	1	A	Corrections on validation of reported idle/inactive and reselection measurements	19.1.0
	RP-110	RP-253734	5566	-	B	Introduction of Rx BSF optimization for NR RRM Ph5	19.1.0
	RP-110	RP-253720	5568	1	A	Correction on UE capability for UTW in positioning SRS frequency hopping in 38331-r19	19.1.0
	RP-110	RP-253716	5573	1	A	Correction on previousPSCellId in SCGFailureInformation	19.1.0
	RP-110	RP-253740	5574	2	F	[S058][B002] Correction to TN to NTN redirection [NR_TN_NTN_redir]	19.1.0
	RP-110	RP-253716	5583	-	A	Correction on uac-BarringFactorForAI3 absence case [MINT]	19.1.0
	RP-110	RP-253719	5585	2	A	Correction on NCD-SSB based RACH-less HO [RACH-lessHO]	19.1.0
	RP-110	RP-253719	5586	1	A	Correction on pdcp-Config for SRB4 and SRB5	19.1.0
	RP-110	RP-253740	5587	1	B	Introduction of early CSI acquisition for L3 handover [EarlyCSI_L3HO]	19.1.0
	RP-110	RP-253744	5590	2	B	Updates of Rel-19 UE capability, including [Simul_SRSCS], [Common_PDCCH_rep_TN], [Pos_SRSHop]	19.1.0
	RP-110	RP-253718	5592	1	A	Misc corrections for LTM and SCPAC	19.1.0
	RP-110	RP-253728	5593	2	F	Corrections on RRC for mobility enhancements Phase 4	19.1.0
	RP-110	RP-253741	5594	3	F	Clarification of SSB-less SCell	19.1.0
	RP-110	RP-253741	5597	1	F	Miscellaneous non-controversial corrections Set XXVI	19.1.0
	RP-110	RP-253717	5599	1	A	Correction on SPR triggering threshold	19.1.0
	RP-110	RP-253716	5602	1	A	Clarification on TA report in NR NTN	19.1.0
	RP-110	RP-253740	5604	2	B	NR-NTN to NB-IoT NTN Cell Selection [IoT_NR_NTN_CellSelect]	19.1.0
	RP-110	RP-253721	5606	-	A	Correction on uplink power control for Type-1 CG-PUSCH [PL RS Type 1 CG]	19.1.0
	RP-110	RP-253716	5609	2	A	Clarification on Epoch time of neighbour cells	19.1.0
	RP-110	RP-253720	5612	1	A	Correction on measurement results in indirect path failure information	19.1.0
	RP-110	RP-253740	5615	-	B	Adding Mobility State in RRC_CONNECTED [SpeedStatePars]	19.1.0
	RP-110	RP-253744	5618	2	F	Corrections on eventD2 (Rel-19)	19.1.0
	RP-110	RP-253719	5619	1	A	Correction on QoE reporting	19.1.0
	RP-110	RP-253719	5622	-	A	Clarification of supported band pairs for UL TX switching	19.1.0
	RP-110	RP-253729	5627	2	F	Further corrections to NR NTN Phase 3	19.1.0
